*PIGEONS' DISCRIMINATION OF PAINTINGS BY
MONET AND PICASSO*

SHIGERU WATANABE, JUNKO SAKAMOTO, AND MASUMI WAKITA

KEIO UNIVERSITY

Pigeons successfully learned to discriminate color slides of paintings by Monet and Picasso. Following this training, they discriminated novel paintings by Monet and Picasso that had never been presented during the discrimination training. Furthermore, they showed generalization from Monet's to Cezanne's and Renoir's paintings or from Picasso's to Braque's and Matisse's paintings. These results suggest that pigeons' behavior can be controlled by complex visual stimuli in ways that suggest categorization. Upside-down images of Monet's paintings disrupted the discrimination, whereas inverted images of Picasso's did not. This result may indicate that the pigeons' behavior was controlled by objects depicted in impressionists' paintings but was not controlled by objects in cubists' paintings.

Key words: stimulus control, concept, pattern discrimination, vision, key peck, pigeon

When we see paintings by Picasso and Monet, we can with some accuracy recognize which is Picasso's and which is Monet's, even if we have never seen the particular paintings before. There are many possible cues for this discrimination, such as color, style of brushing, favorite subjects, and so on, but no single feature differentiates each artist. It is also clear that we have acquired such visual concepts of paintings of Picasso and Monet by experience. Can pigeons discriminate paintings of one artist from those of another artist? If they can,

stein & de Villiers, 1980; Herrnstein, Loveland, & Cable, 1976; Roberts & Mazmanian, 1988; Watanabe, Yamasita, & Wakita, 1993), artificial concepts (Bhatt, Wasserman, Reynolds, & Knauss, 1988; Watanabe, 1991), and symmetry of objects (Delius & Habers, 1978).

Most of these natural-concept experiments used a slide projector as the stimulus-presentation device, and pigeons showed transfer of discrimination of photographs to real objects and of real objects to photographs (Watanabe, 1993). Representational paintings have fea-
