

Carbonic anhydrases: One target for multiple diseases

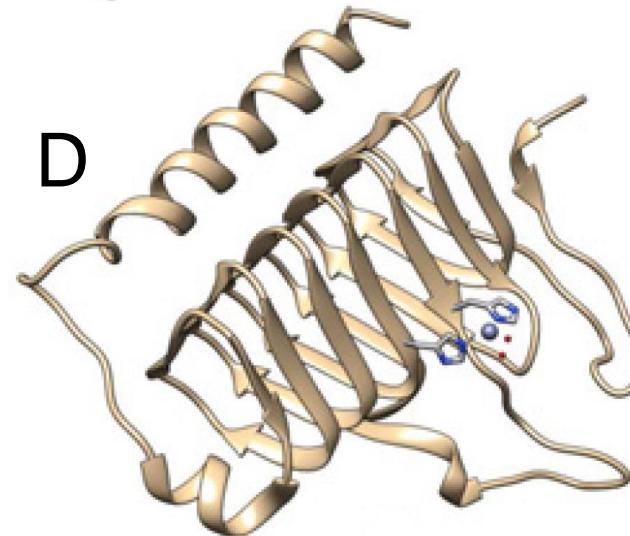

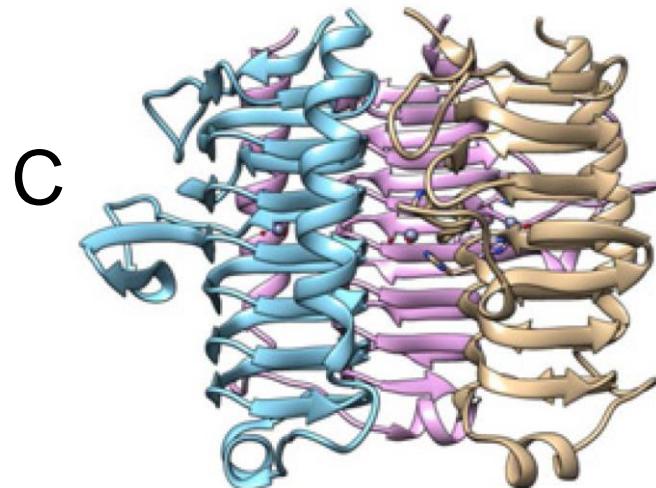

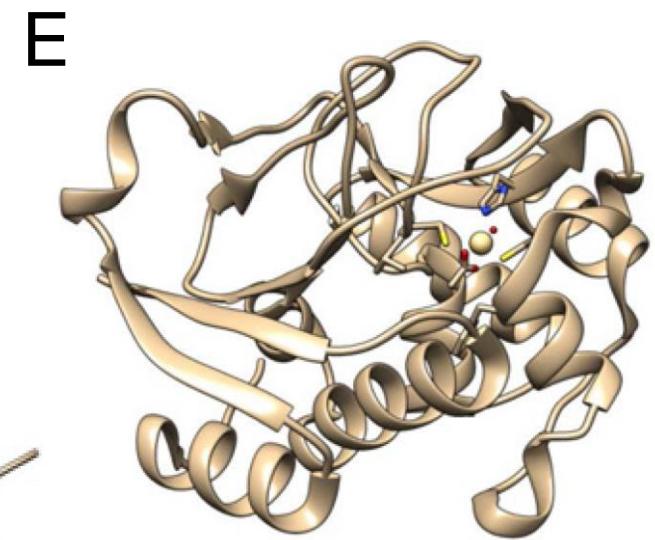

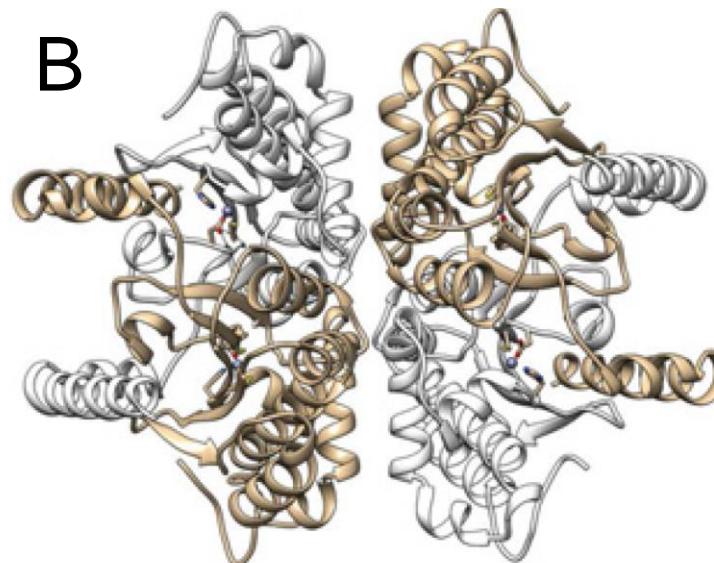

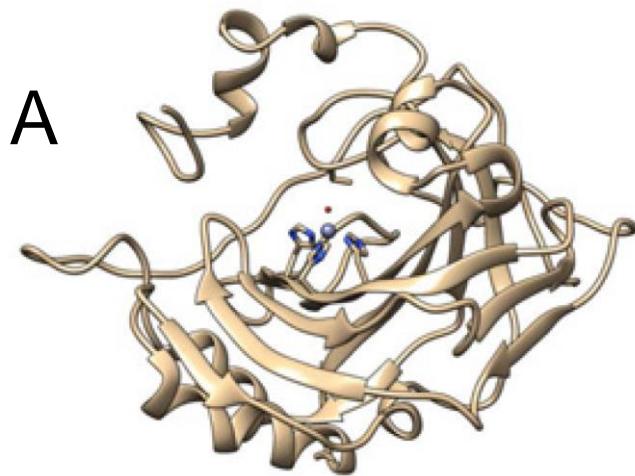

RNDr. Eva Havránková, PhD.

What are carbonic anhydrases (CA)

- CA, EC 4.2.1.1
- Metaloenzymes

Structure

CA families

α -CAs	vertebrates, protozoa, algae, cytoplasm of green plants, Gram ⁻ bacteria
β -CAs	Gram ⁻ bacteria, Gram ⁺ bacteria, algae, chloroplasts of mono- and di-cotyledons, fungi, <i>Archaea</i>
γ -CAs	<i>Archaea</i> , cyanobacteria and most types of bacteria
δ -CAs	marine diatoms
ζ -CAs	marine diatoms
η -CAs	protozoa
θ -Cas	marine diatoms
ι -CAs	marine diatoms

CA presence in the cells

Cytosol

- CA I
- CA II
- CA III
- CA VII
- CA VIII
- CA X
- CA XI
- CA XIII

Membrane-bound

- CA IV

Trans-membrane

- CA IX
- CA XII
- CA XIV

Mitochondria

- CA VA
- CA VB

Saliva and milk

- CA VI

CA presence in organs/tissue

CA I

Erythrocytes,
gastrointestinal tract
(GIT), and eye

CA II

Erythrocytes, eye,
GIT, bone osteoclasts,
kidney, lung, testis,
and brain

CA III

Skeletal muscle and
adipocytes

CA IV

Kidney, lung,
pancreas, brain
capillaries, colon,
heart muscle, and eye

CA V

Liver, Heart and
skeletal muscle,
pancreas, kidney,
spinal cord, and GIT

CA VI

Salivary and
mammary gland

CA VII

Central nervous
system (CNS)

CA VIII

Central nervous
system (CNS)

CA IX

Tumors and
gastrointestinal
mucosa

CA X

Central nervous
system (CNS)

CA XI

Central nervous
system (CNS)

CA XII

Kidney, intestine,
reproductive epithelia,
eye, tumors, and CNS

CA XIII

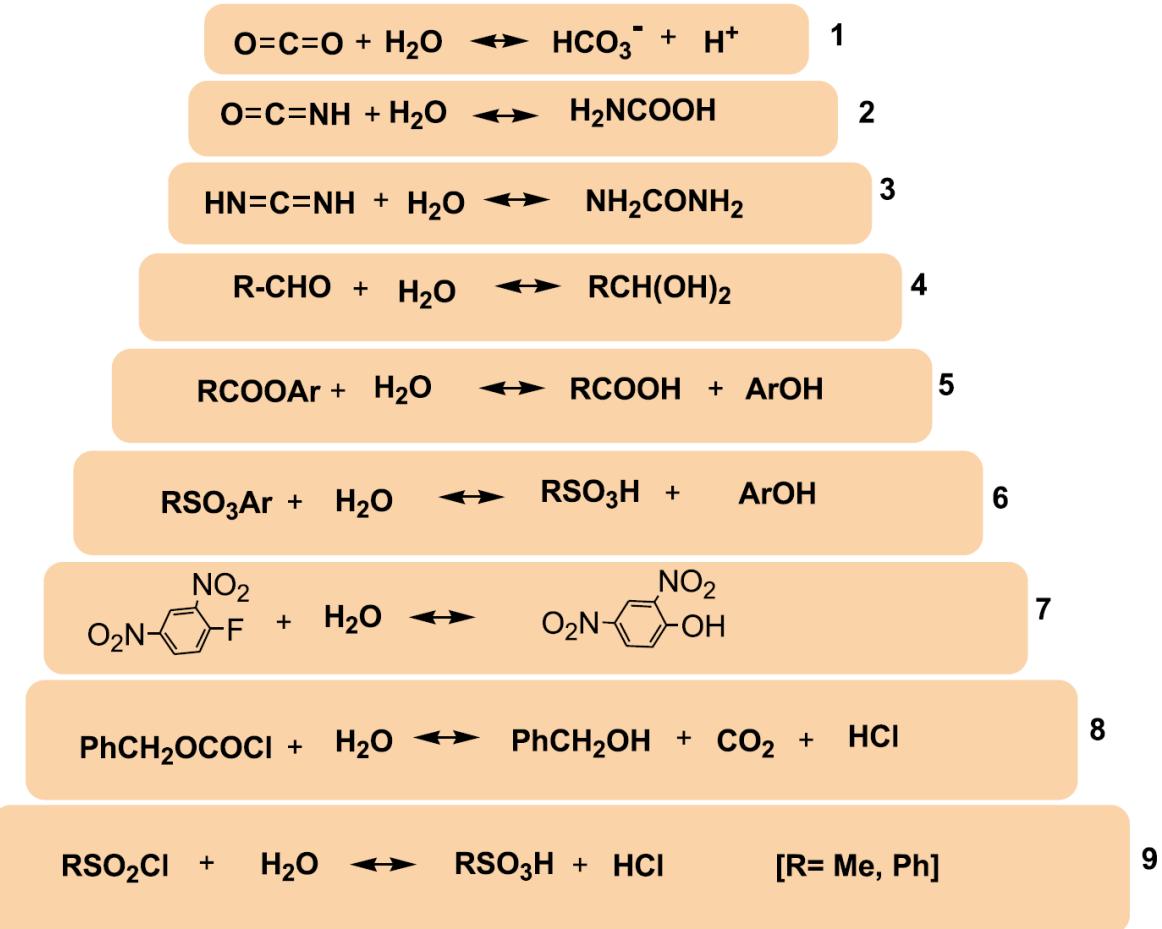

Kidney, brain, lung,
gut, and reproductive
tract

CA XIV

Kidney, brain, liver,
and eye

hCAs are involved in...

- Respiration
- Transportation of CO_2 and bicarbonate
- pH and CO_2 homeostasis
- Electrolyte secretion in various tissues
- Biosynthetic reactions
- Gluconeogenesis
- Adipogenesis
- Ureagenesis
- Bone resorption
- Calcification

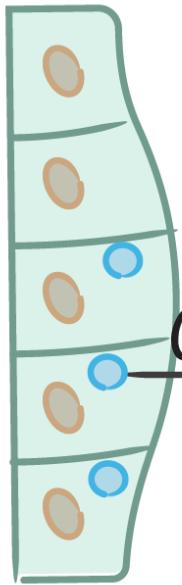

In which form is most of the carbon dioxide transported through the bloodstream?

- dissolved in plasma
- Bonded to haemoglobin in form of carbaminohaemoglobin
- Converted into hydrogencarbonate ions and then transported in plasma

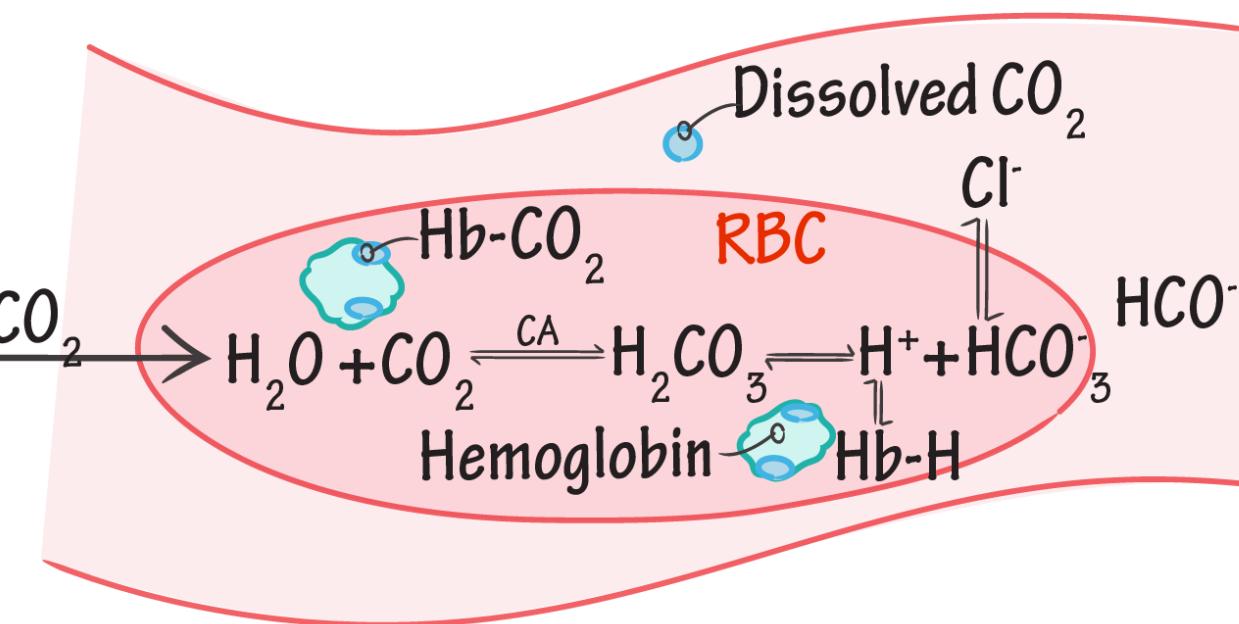

CA in the breathing cycle

CA II
CA I

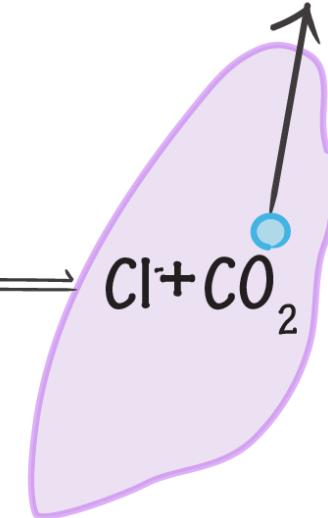

Tissues

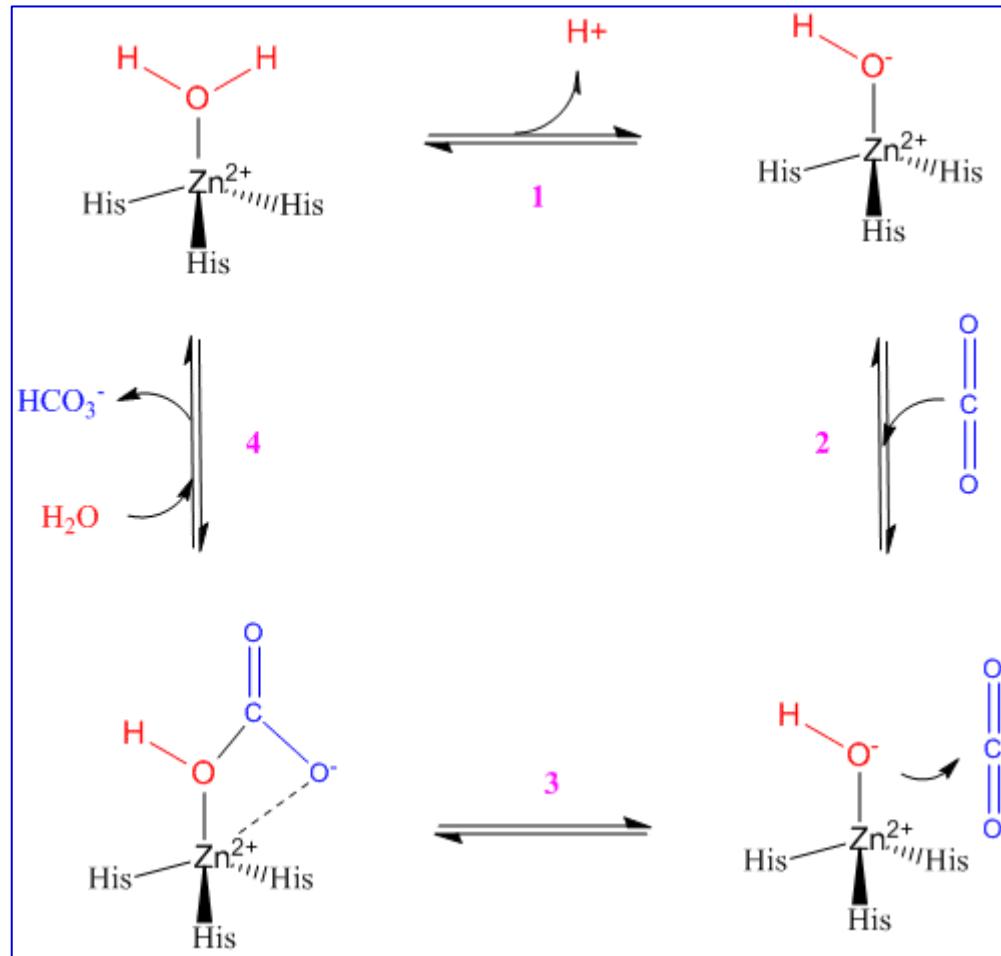

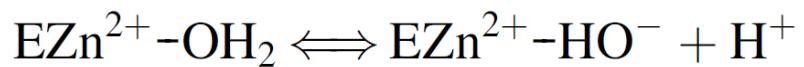

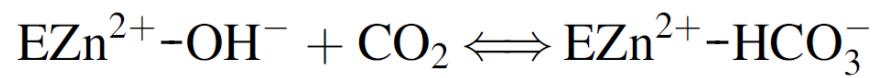

Blood

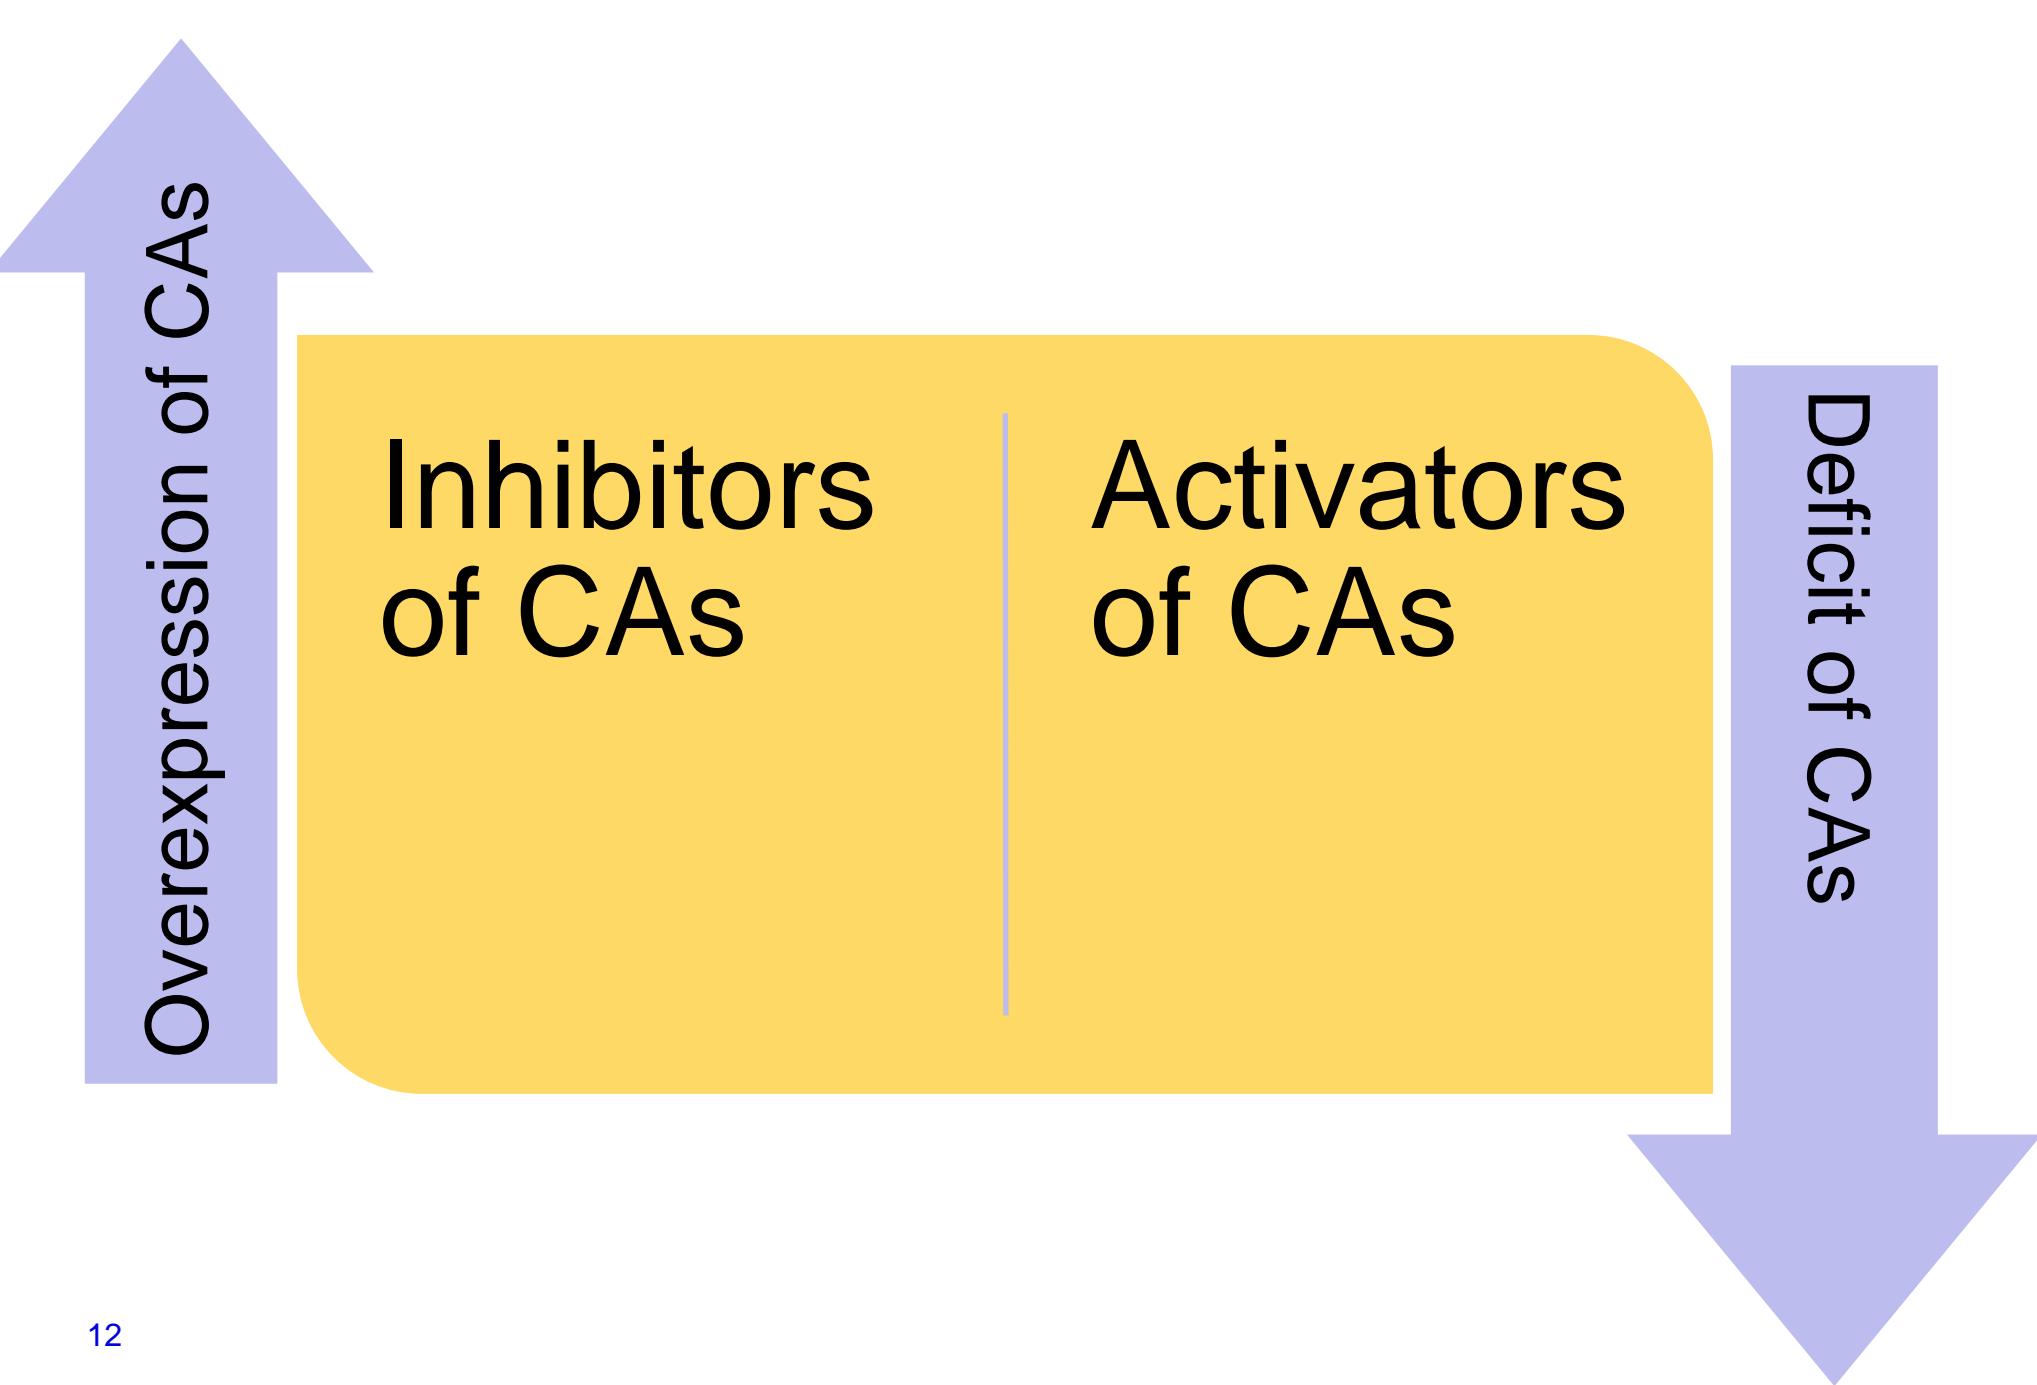

Lungs

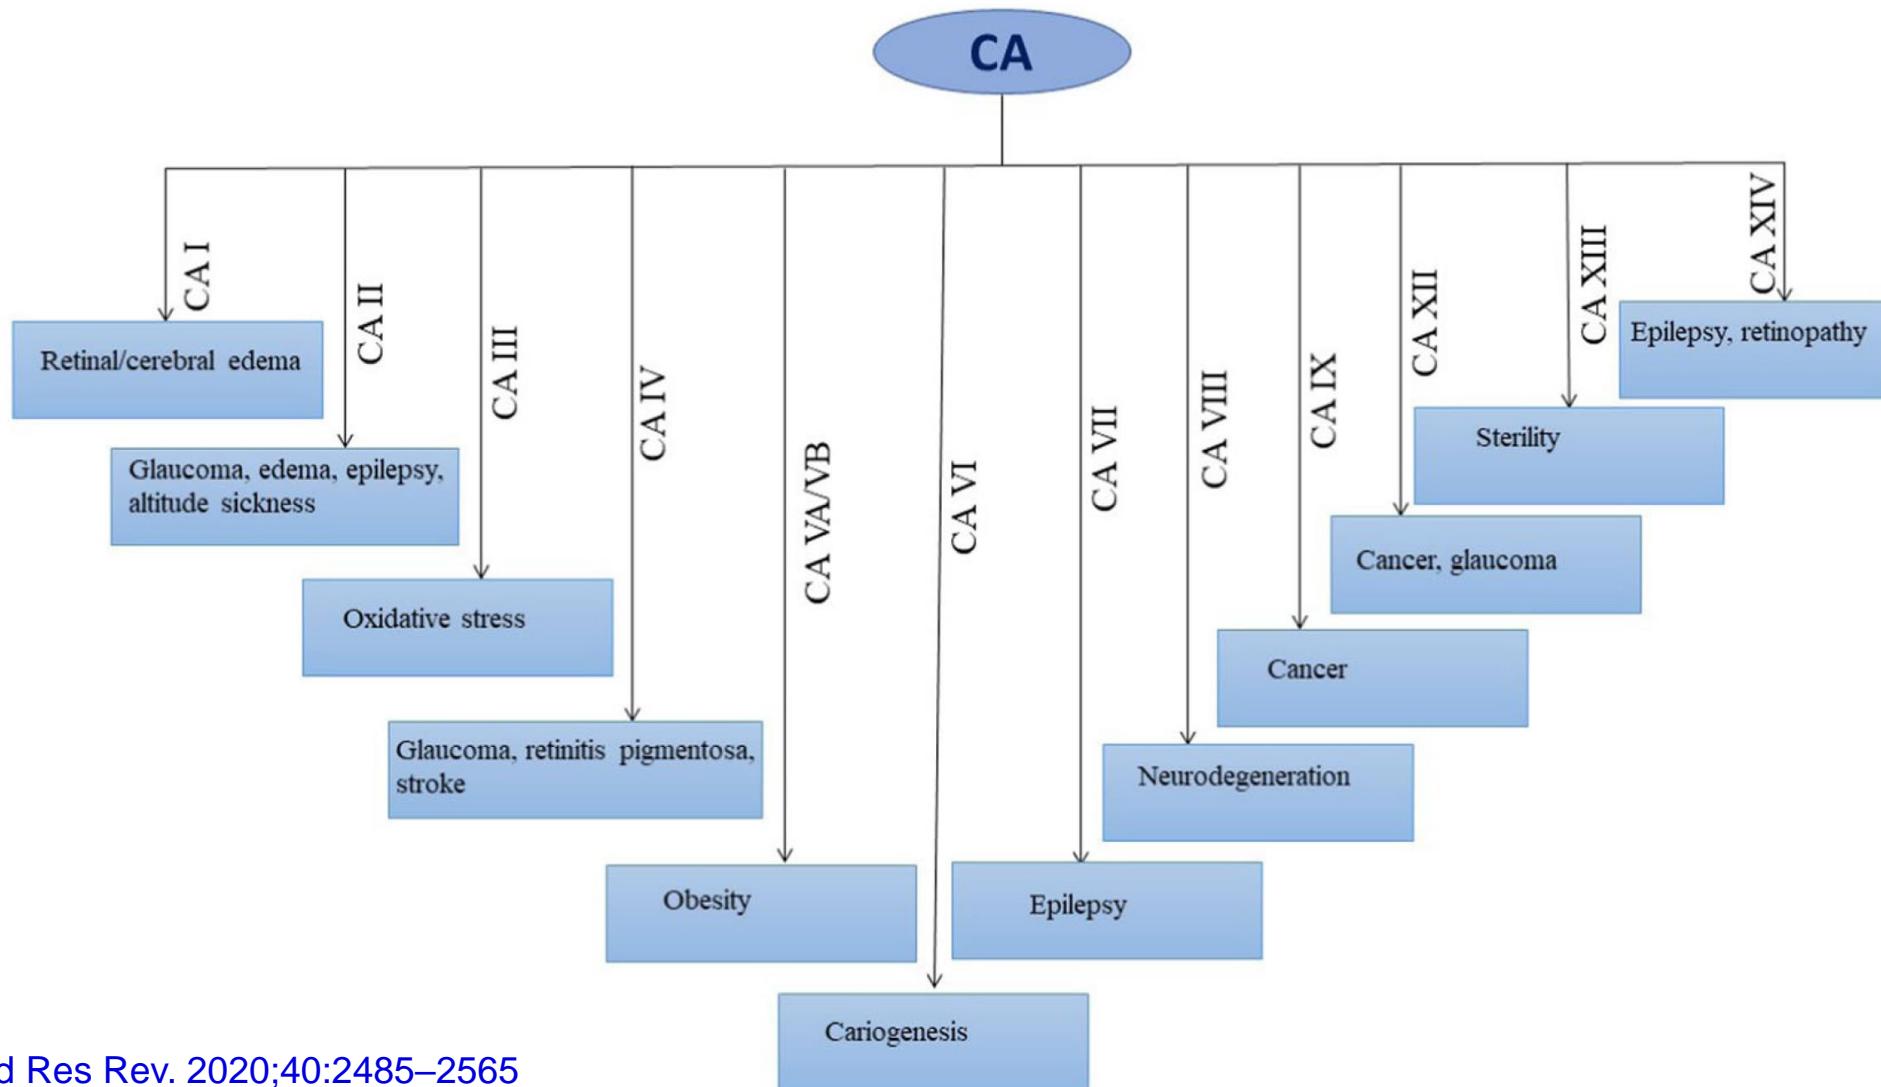

CA Mechanism of Action

How CA can be used in therapy?

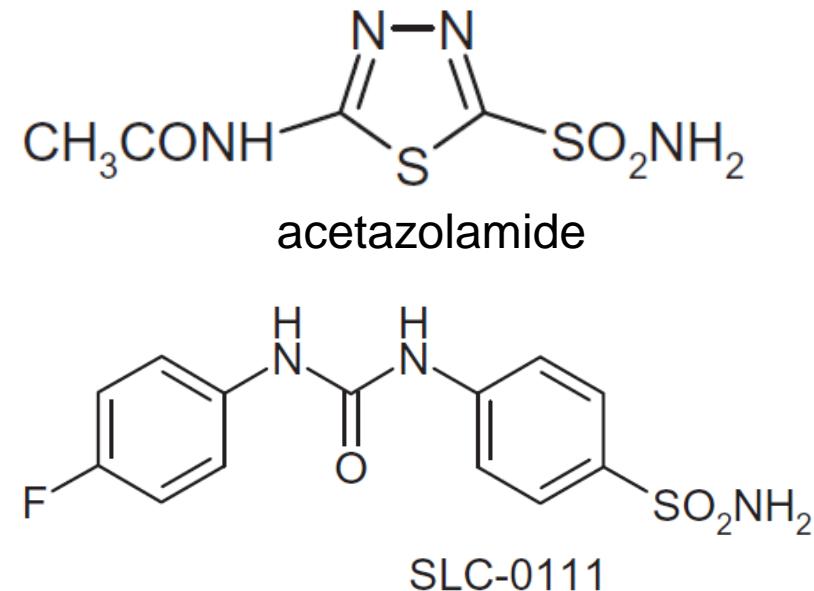

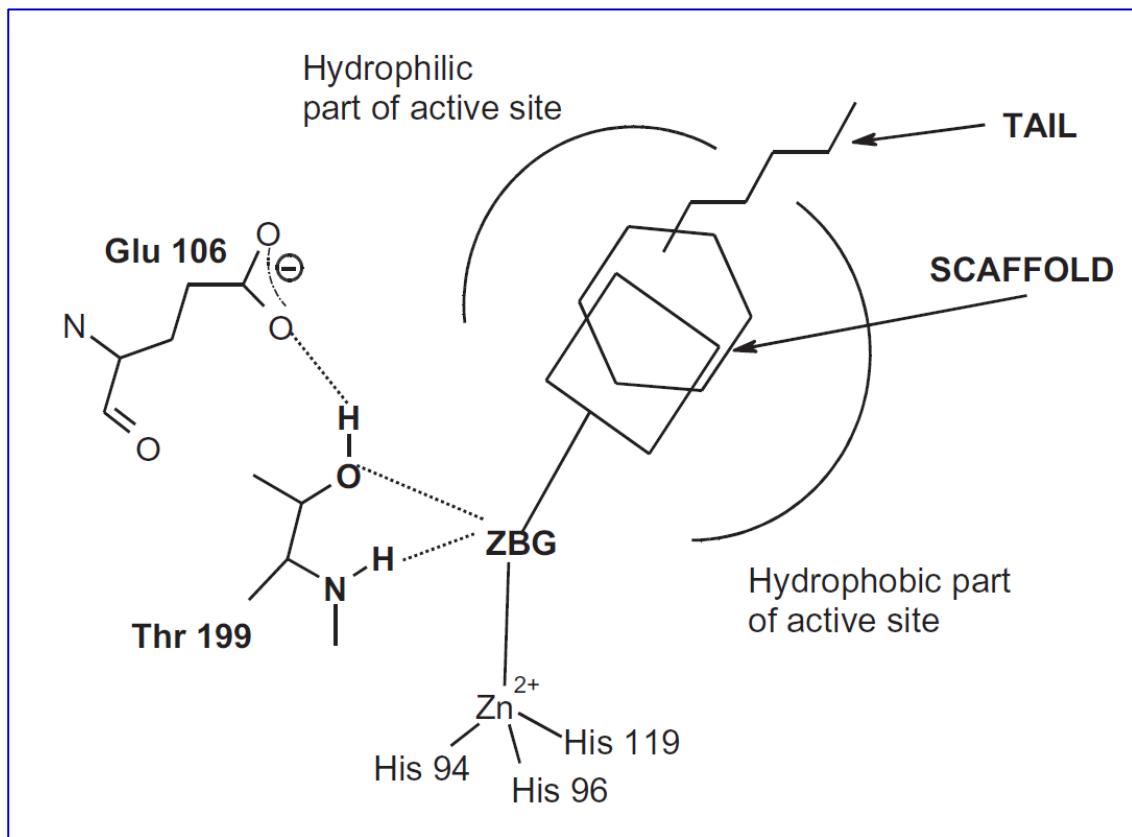

Overexpression/deficit of CAs

**How many mechanism of inhibition
of carbonic anhydrases do we
know?**

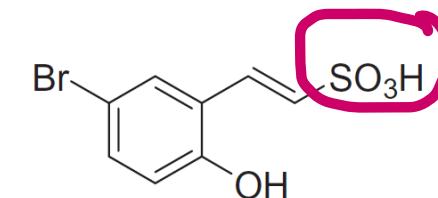

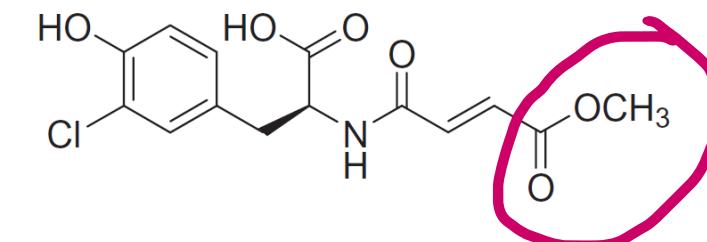

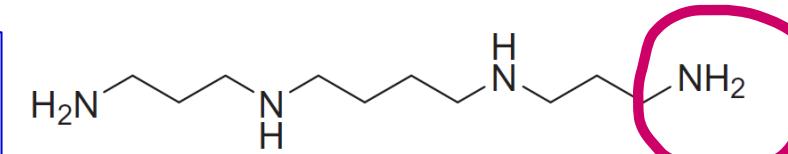

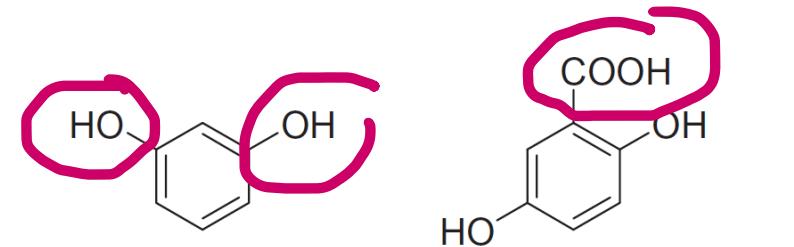

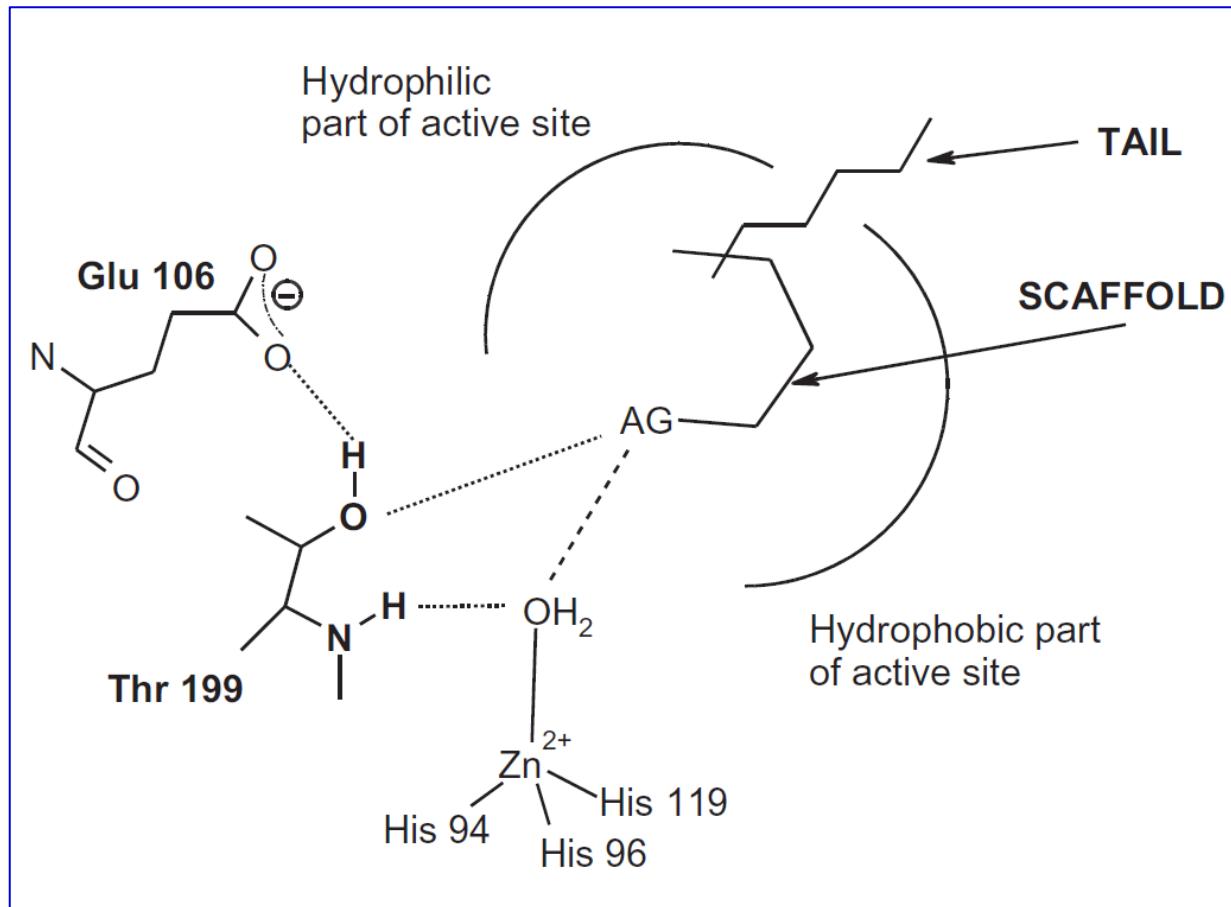

CA Inhibitors Mechanism of Action

The Zinc Binders

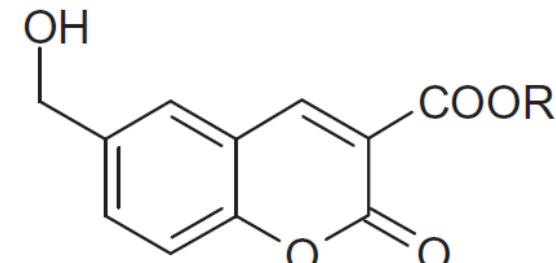

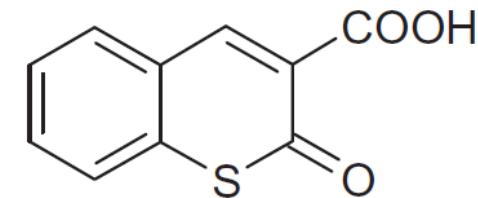

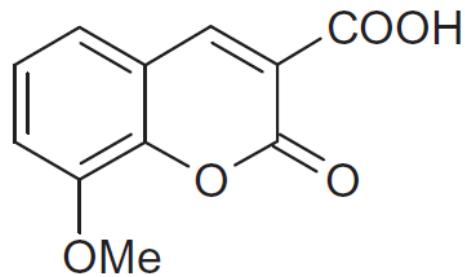

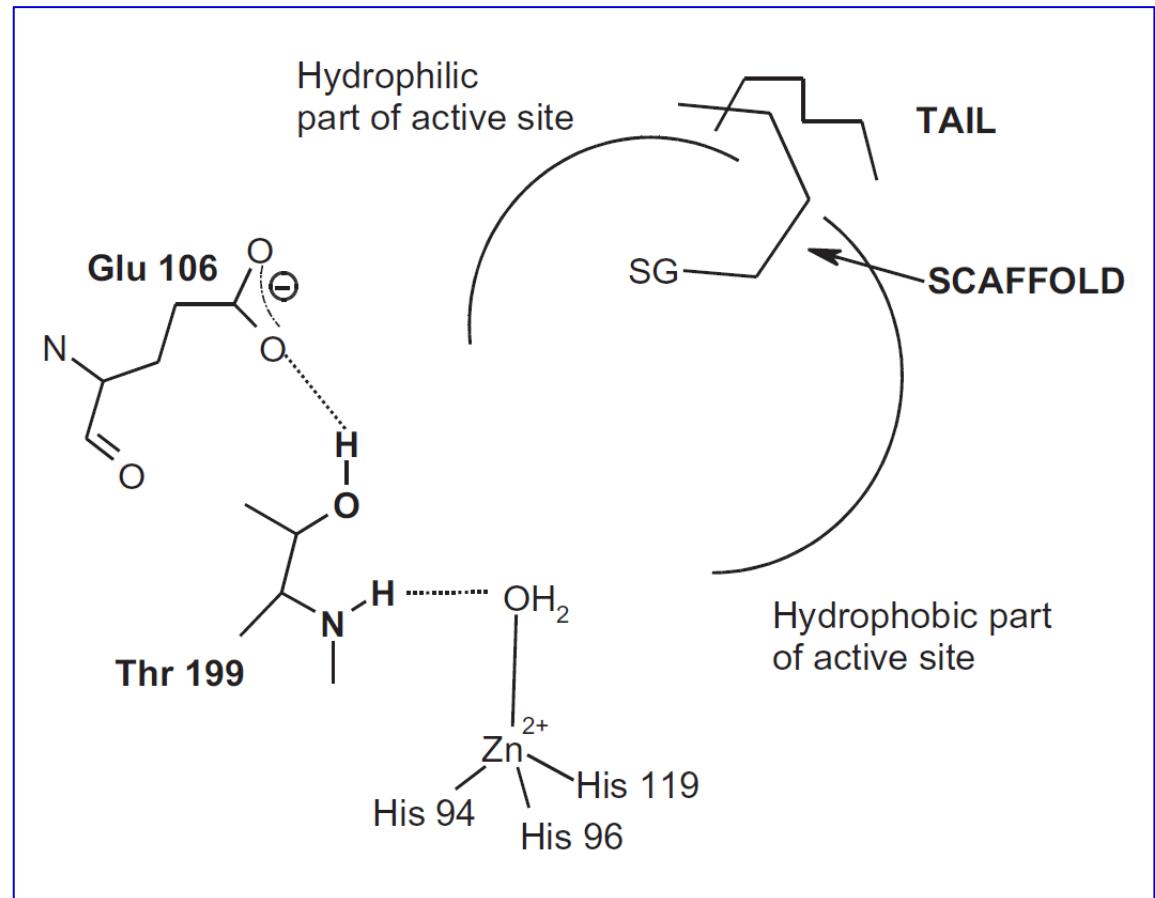

CA Inhibitors Mechanism of Action

CAIs anchoring to the zinc-coordinated water/hydroxide ion

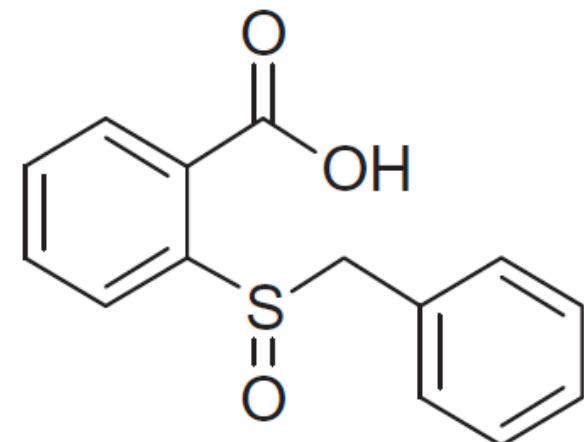

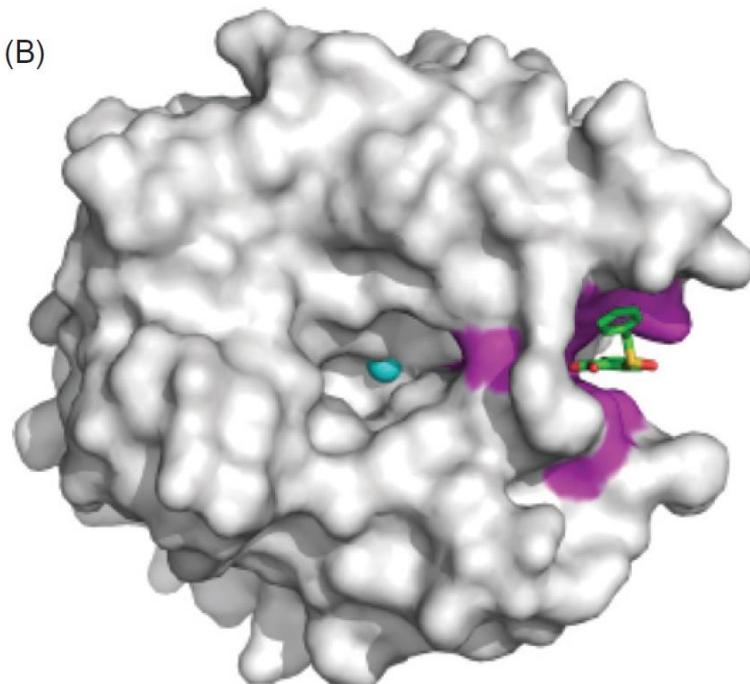

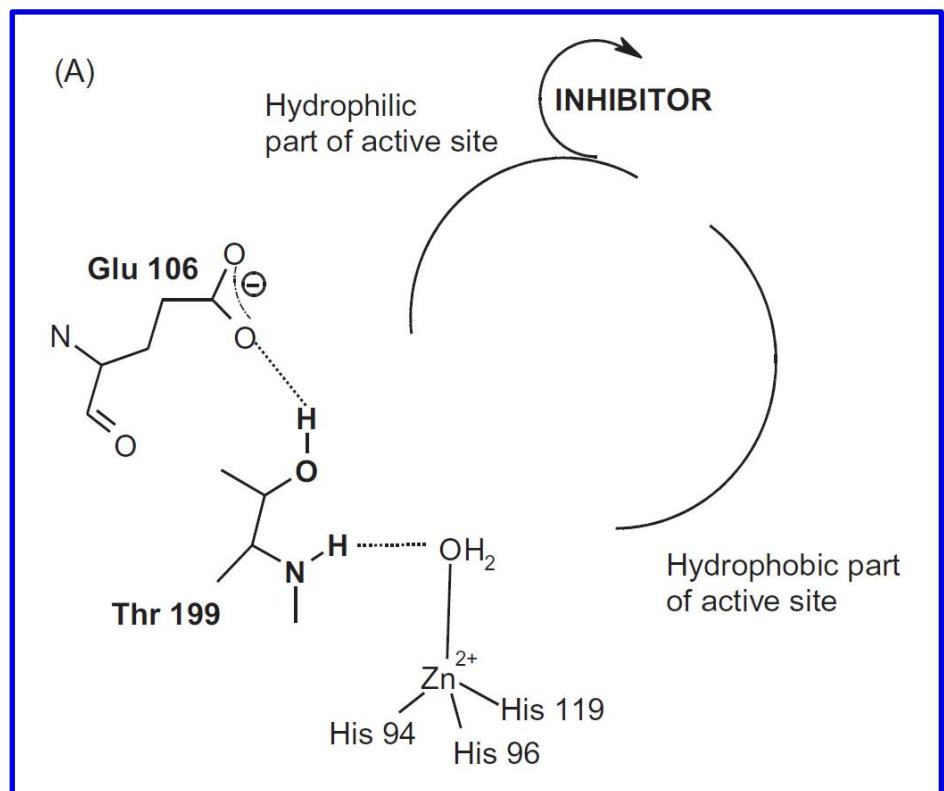

CA Inhibitors Mechanism of Action

CA inhibition by occlusion of the active site entrance

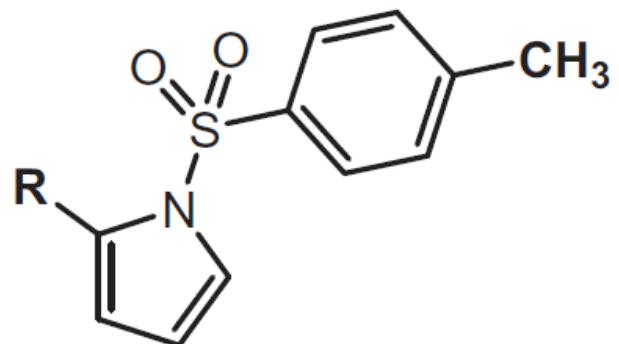

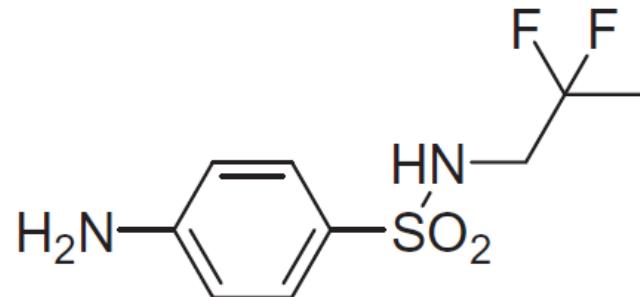

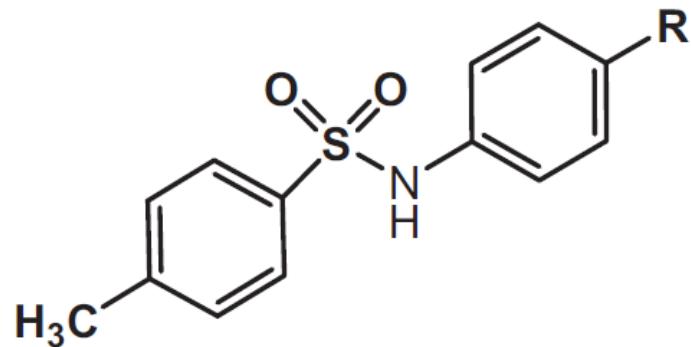

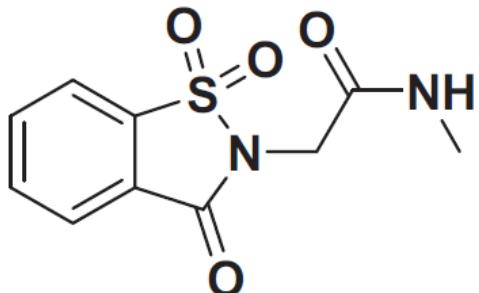

CA Inhibitors Mechanism of Action

Out of the active site binding as a CA inhibition mechanism

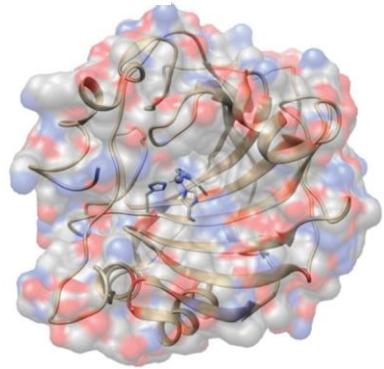

CA Mechanism of Action

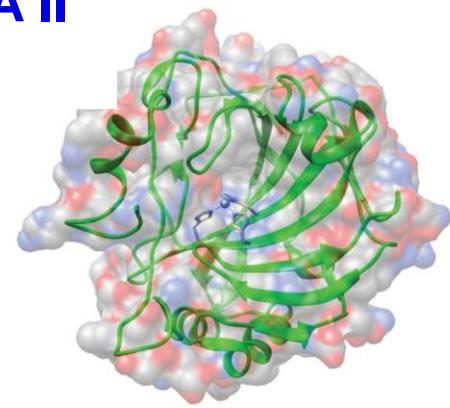

Compounds acting as CAIs with an unknown mechanism of action

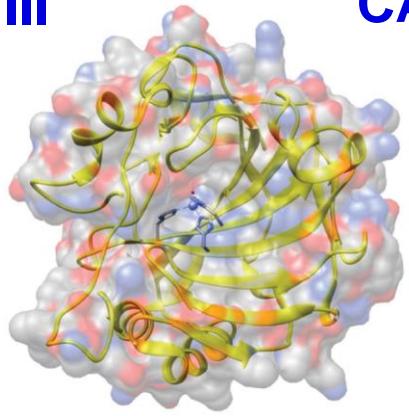

CA I

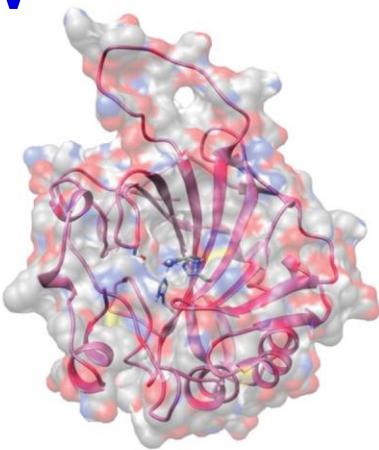

CA II

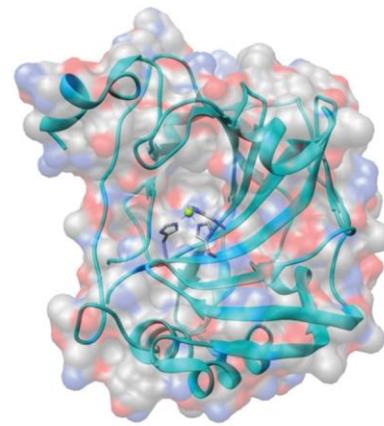

CA III

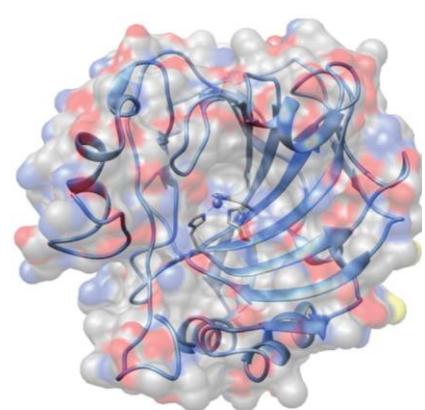

CA IV

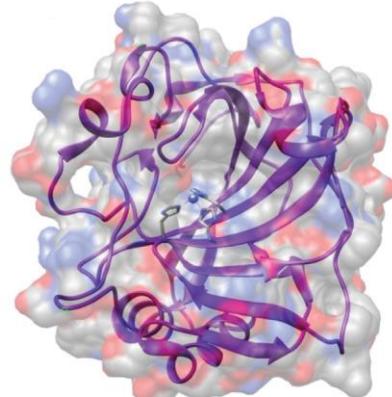

CA VI

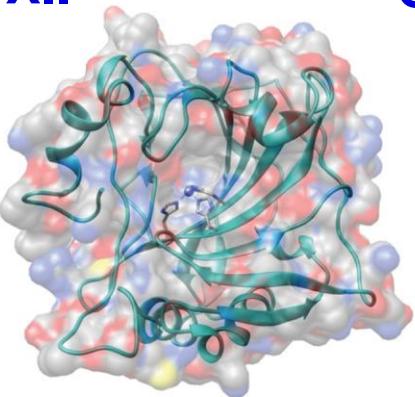

CA VII

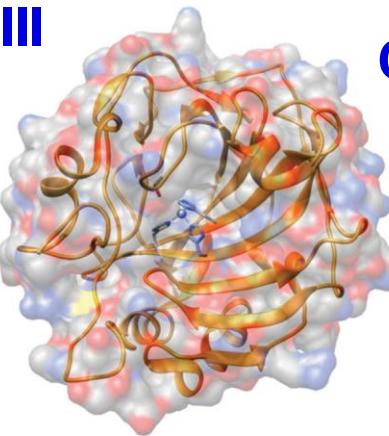

CA IX

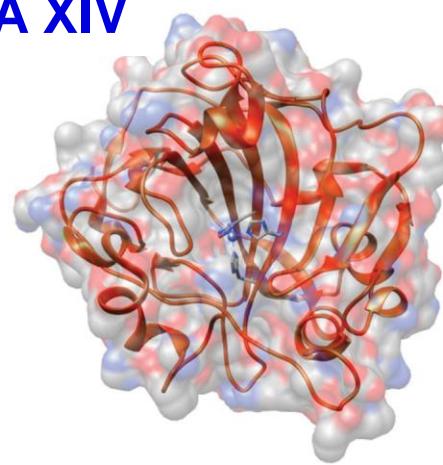

CA XII

CA XIII

CA XIV

How to discover new selective inhibitors ?

How to discover new selective inhibitors ?

Knowledge of the
structure

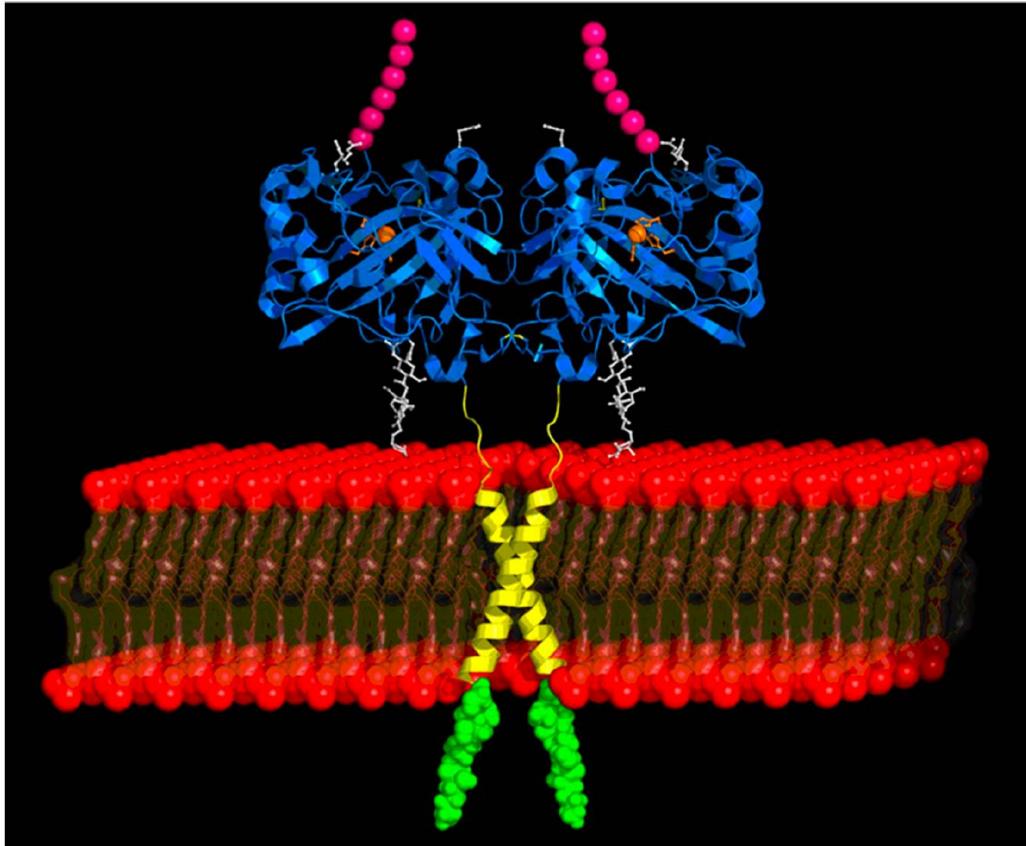

Screening of
anions

Screening of
drugs

Combination of
approaches

Steal other
people's work

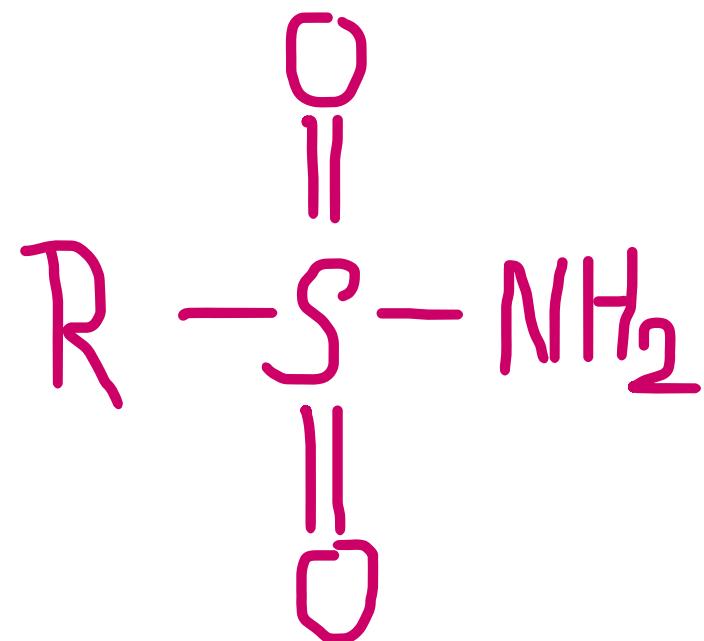

Knowledge of the structure

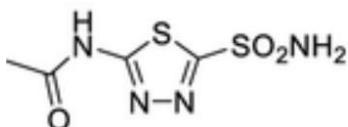

- X-ray crystal structure of CA IX
- NMR
- other

Screening of anions

	K _I [mM]					
	hCA I ^a	hCA II ^a	hCA III ^a	hCA VII ^f	hCA IX ^g	hCA XII ^h
F ⁻	>300	>300	78.5	1.24	48	0.56
Cl ⁻	6	200	0.98	1.84	33	73

How to treat cancer – Inhibition of hCA IX ?

Which isoenzyme is involved in the cancer?

Hypoxia → HIF-1 → aggressive tumor

hCA IX – How it helps the tumor

Catalytic hydration of CO₂

Maintaining pHe and pH_i

Up-regulation of metabolism

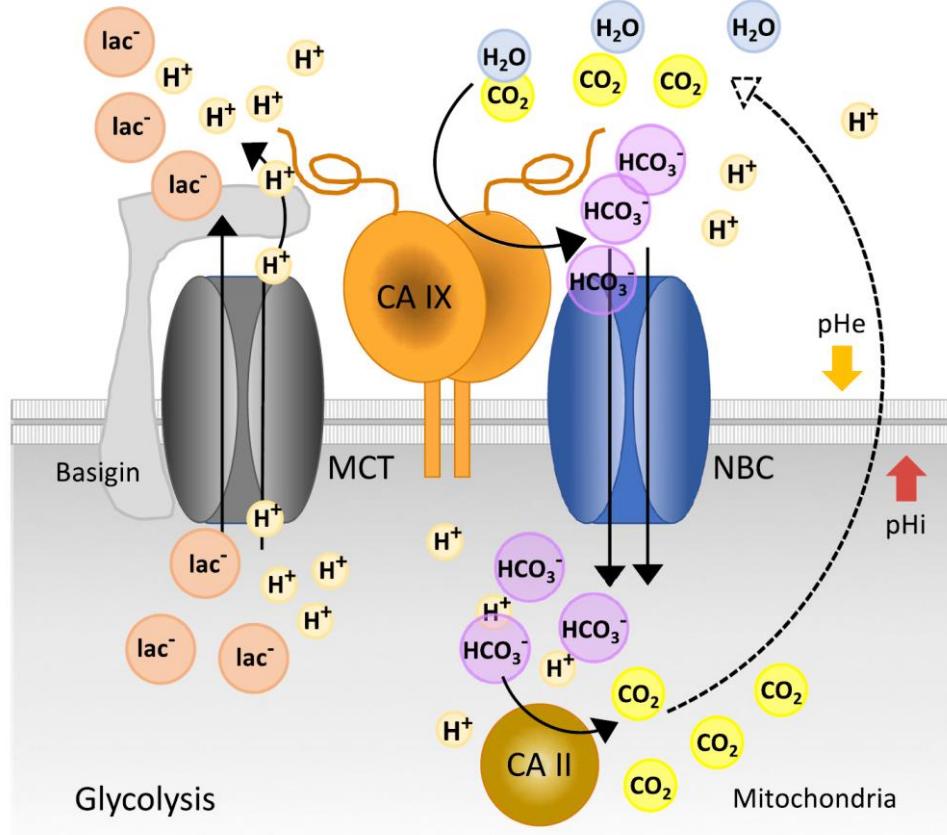

Increased adhesion ability

Migration
Invasion
Metastasis

Interaction with signal cascades

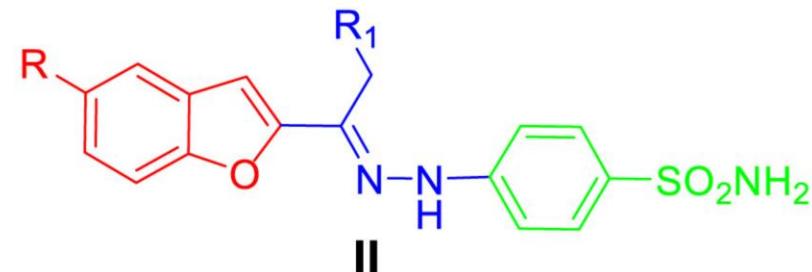

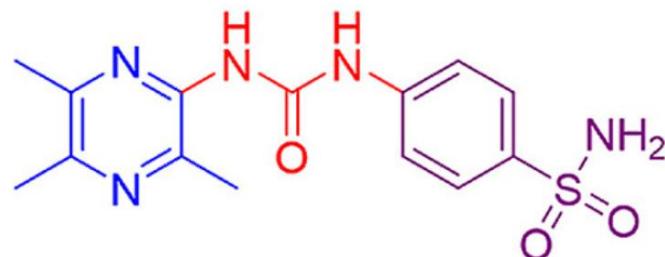

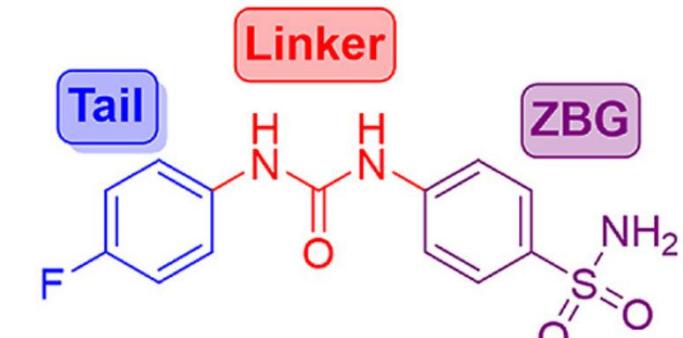

Support of angiogenesis

What the hCA IX inhibitors do?

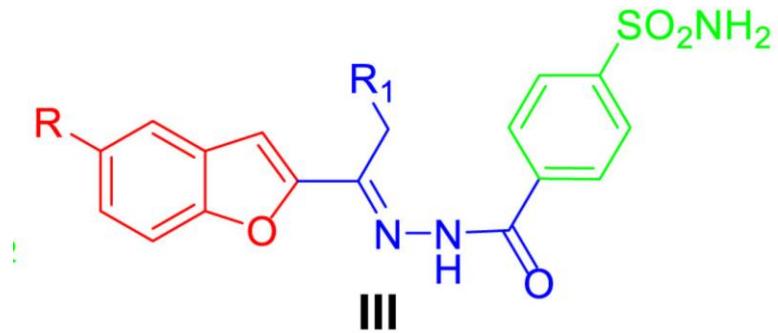

- No cytotoxicity (cytostatic effect)
- Inhibit all of the previously mentioned processes
- Prevents the formation and spread of metastasis
- Multiply increases sensitivity to existing treatments

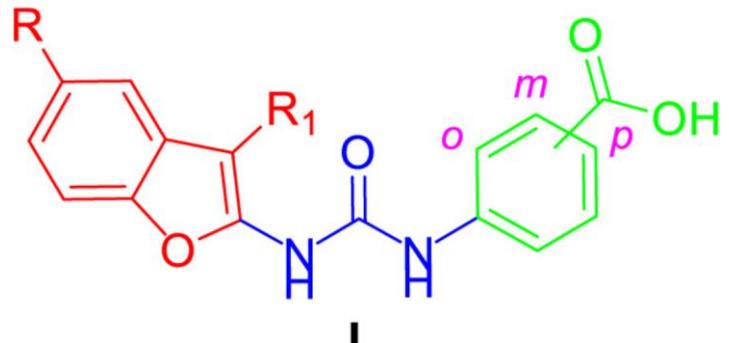

Inhibitors of CA IX

hCA IX: K_I s range 10.0 - 76.6 nM

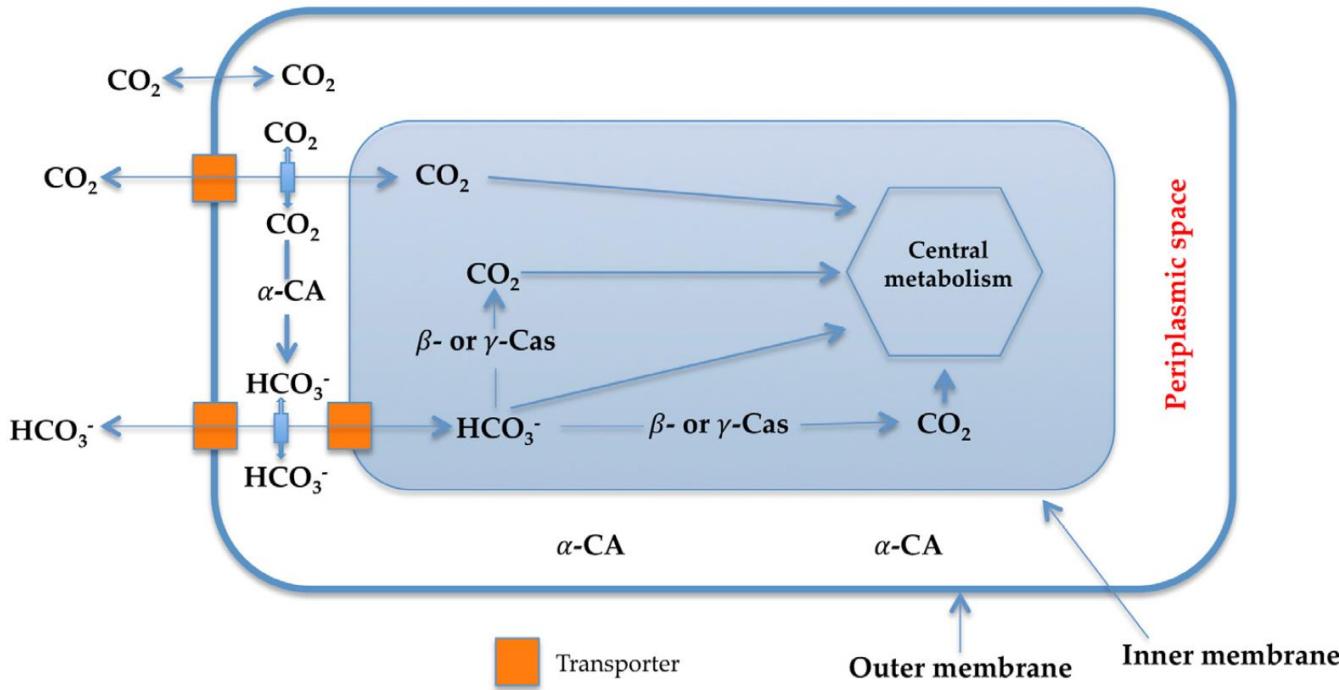

hCA IX: K_I s range 27.7 - 97.5 nM

hCA IX: K_I s range 0.56 - 5.1 μ M

What about bacterial CAs ?

Bacterial CA

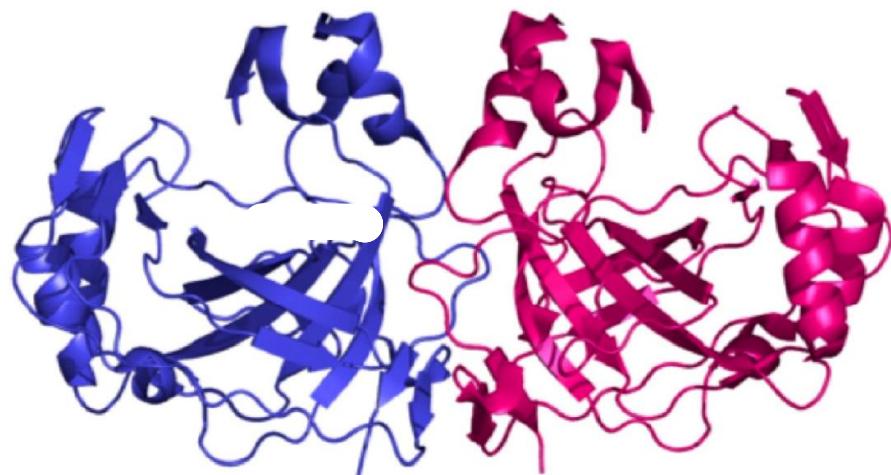

Inhibition of CA:

- disruption of essentials metabolic pathways
- growth retardation
- growth defects
- vulnerable to host defense mechanism

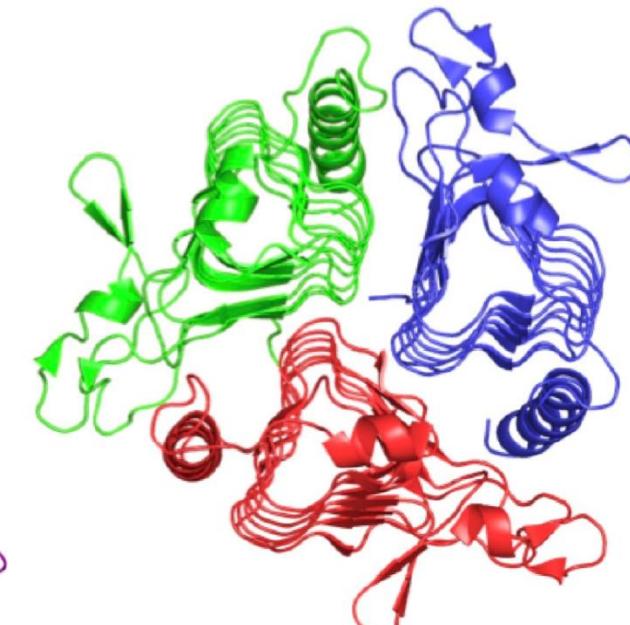

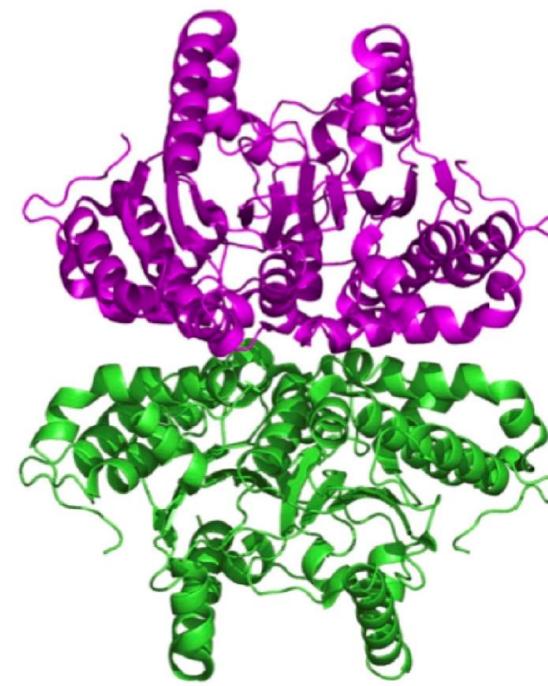

Bacterial CA

γ -CA

α -CA

β -CA

Does it have potential?

- Wide range of diseases
- Effective treatment
- Great potential
- But.....
