| NAME:                                                                                 |
|---------------------------------------------------------------------------------------|
| ORGANOLEPTIC EVALUATION:                                                              |
| BEHAVIOUR OF COMPOUND DURING HEATING AND BURNING: organic/inorganic/organic-inorganic |
| ELEMENTARY ANALYSIS:                                                                  |
| <b>SOLUBILITY</b> (0.05 g of compound in 5.0 ml of solvent):                          |
| pH of solution/suspension (with indicator paper):                                     |
| REACTION FROM FLOWCHARTS:                                                             |
| IDENTIFICATION REACTION:                                                              |
| RESULTS:                                                                              |
