

# **Safety rules in laboratory**

# **Good laboratory practice**

Biology practical classes 2024

# Safety rules in laboratory I

- Entry into the laboratory is only allowed to persons working there.
- Eating, drinking and smoking is not allowed.
- It is forbidden to pipette with your mouth.
- Adhere to principles of personal hygiene (no rubbing your eyes, nose, scratching in the hair, chewing on nails). Keep the lab clean and in order.

# Safety rules in laboratory II

- Always use lab coat, slippers and wear gloves.
- During classes you will be working with many types of chemicals, it could be dangerous to pregnant women and mothers during 9 months after birth, so female students are obliged to report a possible pregnancy.
- You should clean and disinfect your hands when splashed with any chemical material and before leaving the labs.

# Safety rules in laboratory III

- It is not allowed to open windows.
- Never put your personal belongings on worktables.
- Before and after practice disinfect your worktable.
- Any injury must be reported and treated.
- Do not take any lab tools from the lab.

# Health protection

- Work safety and hygiene must be respected. Upon completion of work, hands should be thoroughly washed with soap and disinfected.
- If any chemical or biological material gets into your mouth, the mouth must be thoroughly rinsed and gargled with an antiseptic agent.
- If the chemical or biological material gets into the eye, the eye should immediately be rinsed with water and then with an appropriate antiseptic.
- Contaminated skin or object (work desk, clothing) should be wiped immediately with disinfectant solution.
