

Zdroje a jejich kategorie

Zastoupení druhů surovin ve světové ekonomice

- podle objemu - velikosti těžby
- podle hodnoty těžby

Zdroje v čase a prostoru

- změny struktury v čase a prostoru
- stav v ČR

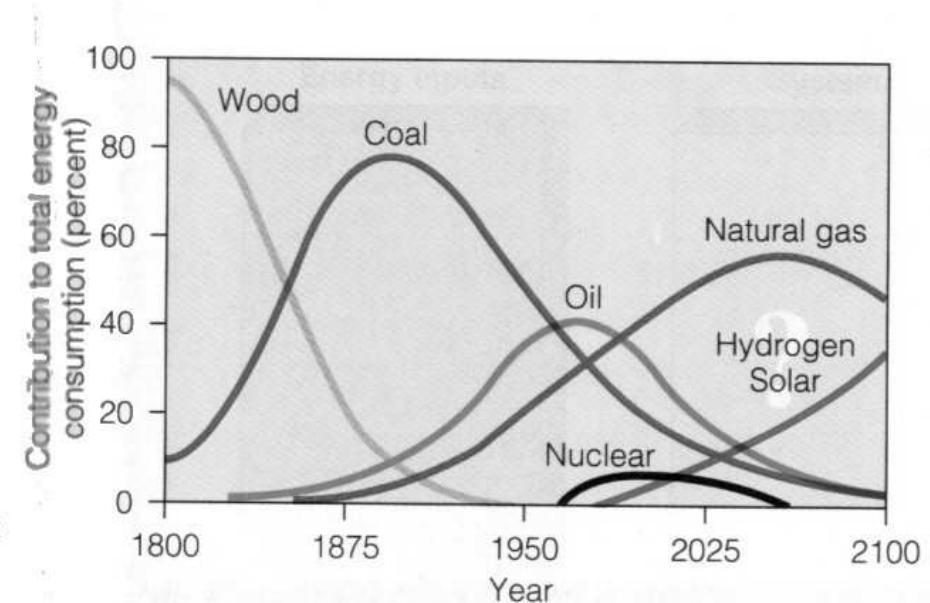

Figure 18-4 Shifts in the use of commercial energy resources in the United States since 1850, with projected changes to 2100. Shifts from wood to coal and then from coal to oil and natural gas have each taken about 50 years. Affordable oil is running out, and burning fossil fuels is the primary cause of air pollution and projected warming of the atmosphere. For these reasons, most analysts believe we must make a new shift in energy resources over the next 50 years. Some believe that this shift should involve improved energy efficiency and greatly increased use of solar energy and hydrogen. (Data from U.S. Department of Energy)

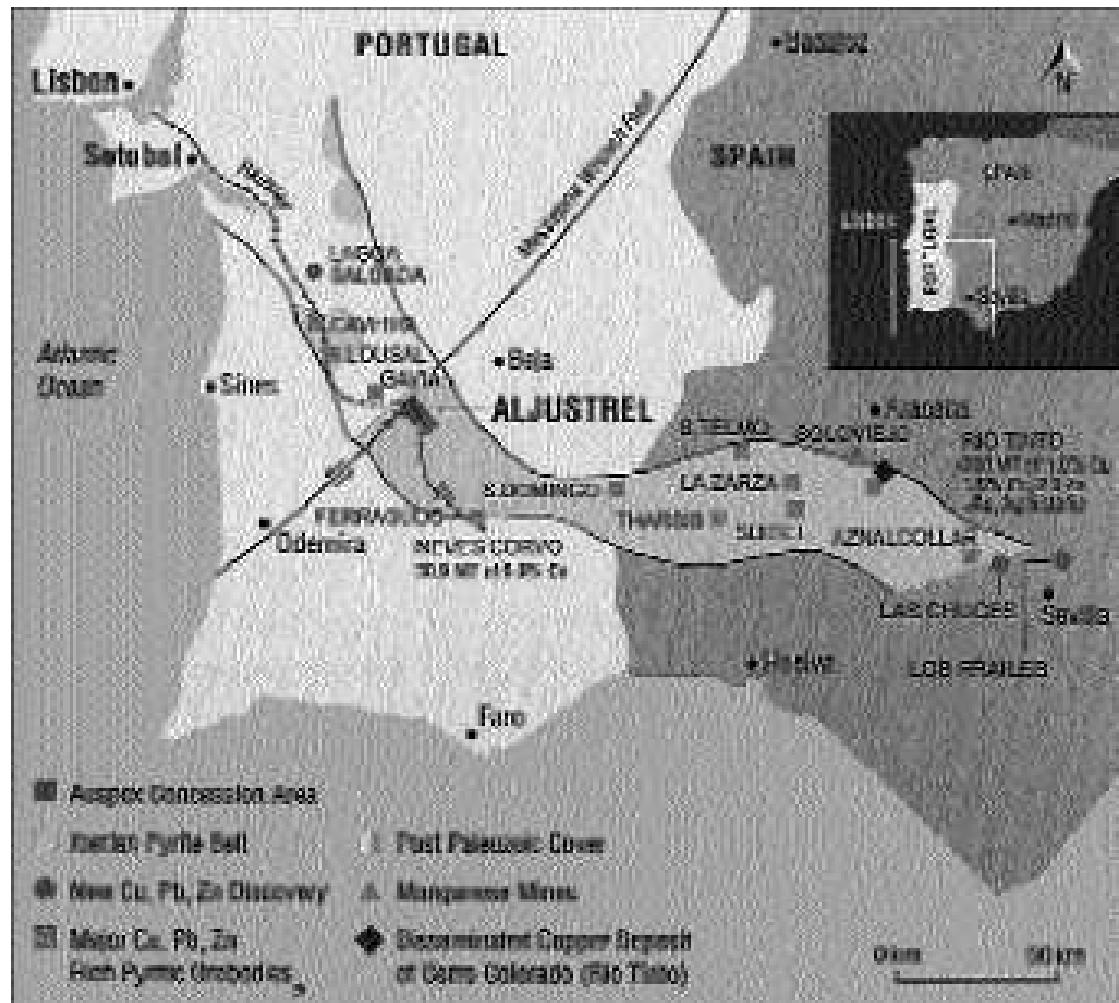

Základní kategorie zdrojů nerostných surovin ve světě

- podle lokalizace – odlišné ekonomické, technické a právní faktory
- na Zemi: na povrchu, v litosféře, v hydrosféře
- netradiční zdroje
- extraterestrické

Zdroje v litosféře

Průzkum a těžba dna oceánů

Těžba na pobřeží a šelfech

- proč právě třeba v ekologicky citlivém prostředí
- plážová ložiska – rozsypy
- uhlovodíky
- mořská voda

Uhlovodíky na šelfech

- ropa, zemní plyn
- hydráty metanu

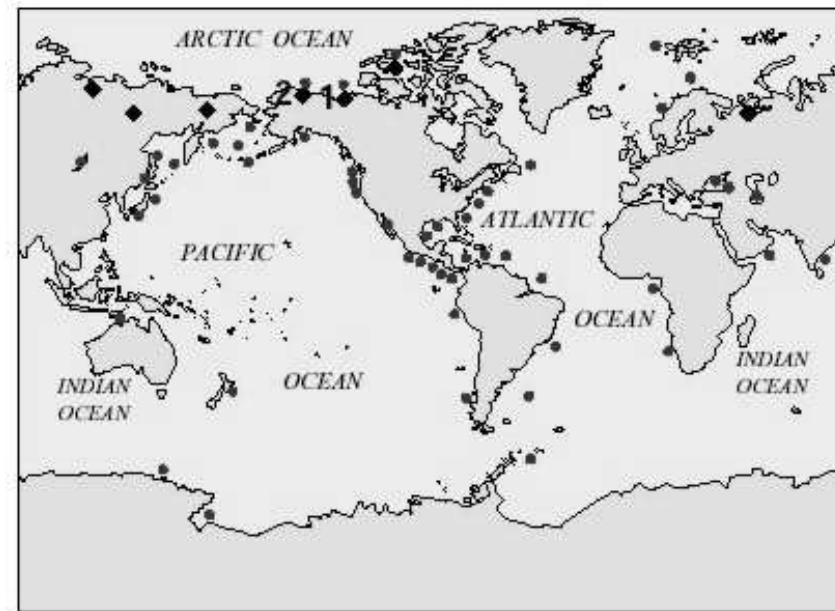

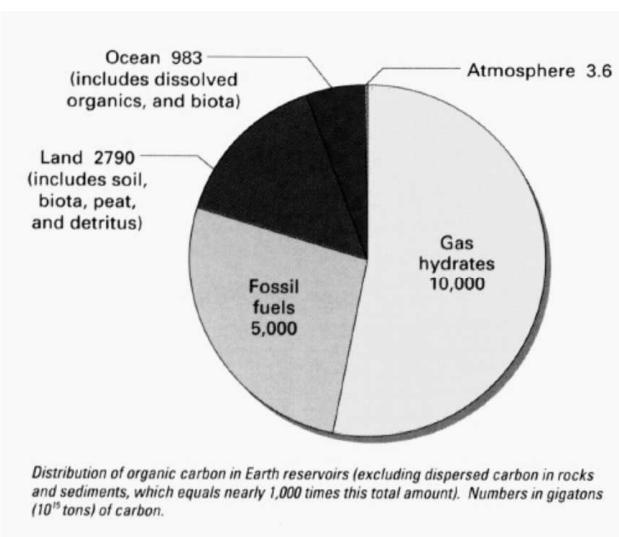

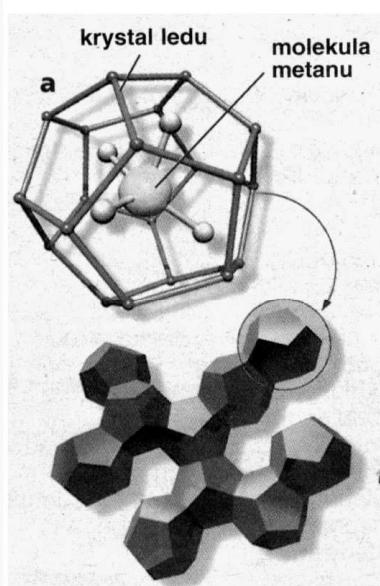

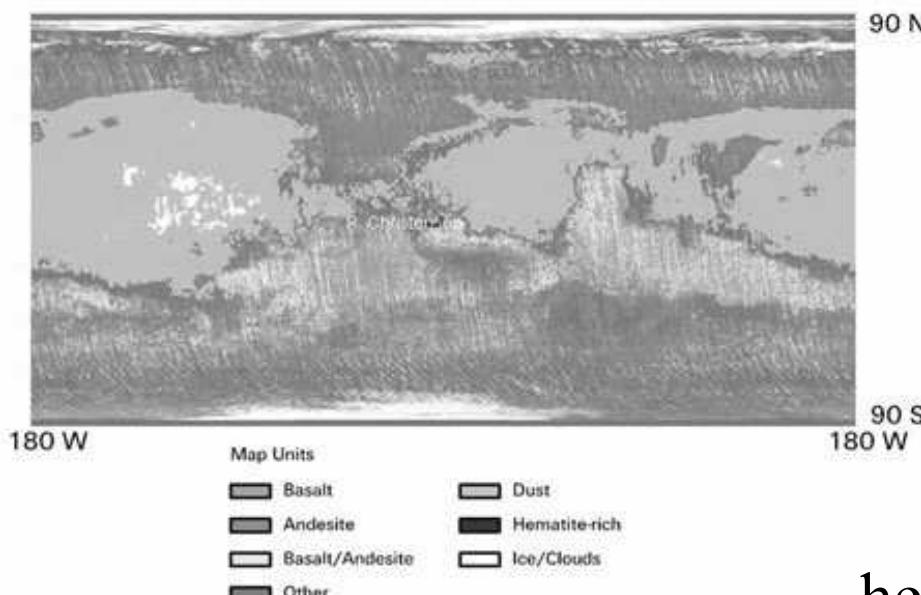

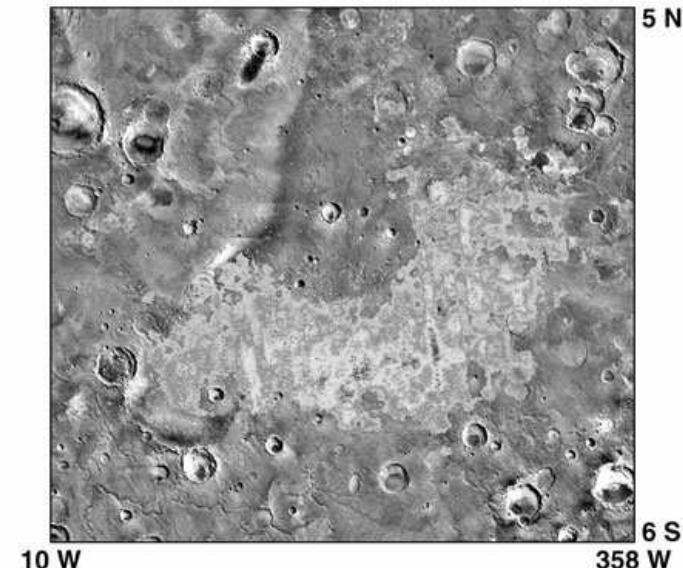

Figure 1. Known and inferred natural gas hydrate occurrences in marine (red circles) and permafrost (black diamonds) environments. Modified from K. A. Kvenvolden, U.S. Geological Survey (written commun., 1999). The USGS is studying hydrates at sites 1 (Mackenzie Delta, Canada) and 2 (North Slope, Alaska).
