

# *Blok 3*

# Funkce proteinů

C3211 Aplikovaná bioinformatika  
Přednášející: Josef Houser

# Funkce proteinů

- **Enzymy** – 6 hlavních tříd
- **Strukturní proteiny** – keratin, kolagen
- **Transportní proteiny** – albumin, hemoglobin
- **Obranné proteiny** – protilátky
- **Regulátory a receptory** – hormony, transkripční faktory, rhodopsin
- ...

# Klasifikace enzymů

Dle IUBMB: <http://www.chem.qmul.ac.uk/iubmb/enzyme/>

	Třída	Charakteristika	Počet Podtříd
1	Oxidoreduktasy	Katalyzují různé redoxní reakce – přenos vodíku, kyslíku, elektronů (obvykle s využitím koenzymů, např. NADH, NADPH, FADH <sub>2</sub> nebo hemu)	23
2	Transferasy	Katalyzují přenos skupin: amino-, methyl-, acyl-, glykosyl-, fosforyl-	10
3	Hydrolasy	Katalyzují hydrolytické štěpení vazeb mezi atomem uhlíku a jinými atomy (spotřebování molekuly H <sub>2</sub> O)	13
4	Lyasy	Katalyzují adiční reakci na dvojné vazbě nebo eliminační reakci mezi 2 atomy uhlíku za vzniku dvojné vazby	7
5	Isomerasy	Katalyzují racemizaci optických izomerů nebo vytvoření polohových izomerů	6
6	Ligasy	Katalyzují tvorbu vazeb mezi uhlíkem a jinými atomy spojenou se štěpením ATP	6

# Transportní proteiny

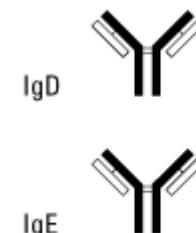

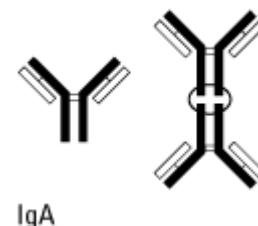

Dle TCDB (transporter classification database):

<http://www.chem.qmul.ac.uk/iubmb/mtp/>

	Třída
1	Póry a kanály
2	Přenašeče řízené elektrochemickým potenciálem
3	Přenašeče řízené chemickou reakcí
4	Skupinové přenašeče
5	Transmembránové elektronové přenašeče
6	Nepřiřazeno
7	Nepřiřazeno
8	Accessory factors involved in transport
9	Nedostatečně charakterizované transportní systémy

# Protilátky

	Subtypů (člověk)	Charakteristika
IgA	2	Monomer/dimer, přítomna ve slinách, slzách (15%)
IgD	1	Monomer, funkce neznámá (0,2%)
IgE	1	Monomer, obrana proti parazitům, význam pro alergické reakce (0,002%)
IgG	4	Monomer, hlavní lidská protilátka v sekundární imunitní odpovědi (75%)
IgM	1	Pentamer, hlavní protilátka v primární imunitní odpovědi (10%)

# Určení funkce proteinu

- **Experimentální**

- Izolace proteinu s konkrétní funkcí
- Stanovení funkce u konkrétního proteinu

- **Predikce – na základě podobnosti**

- Lokalizace
- Multiple sequence alignment (BLAST, Pfam)
- Struktura molekuly (ProFunc, Catalytic site atlas)
- Textové hledání v publikacích (STRING)

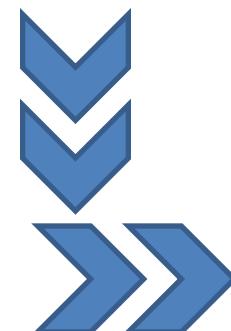

# Určení funkce proteinu

- Nezavrhuje jednoduchá řešení

*Jakou funkci má tento protein?*

Taq DNA polymerase

# Predikce funkce proteinu

Nutno znát **sekvenci**

- Databáze
- Sekvenace

Lépe znát **strukturu** (2D, 3D)

- Databáze
- Určení 2D struktury viz. předchozí blok
- Určení 3D struktury viz. následující blok

# Databáze strukturních a funkčních motivů

- Neanotované, nerevidované – „slepé“ přebírání dat
- Anotované, revidované – probíhá kontrola vkládaných dat
- Obsahují různé informace – sekvenční, strukturní, odkazy na experimentální data,...
- Slouží jako zdroj informací pro nadstavbové programy.

# Databáze strukturálních a funkčních motivů

Často navzájem provázané. Např.:

- **UniProtKB** – kombinovaná proteinová databáze, vč. biologických dat
- **Pfam** – odvozená z UniProtKB
- **KEGG** – složená databáze obsahující systémové, genomické a chemické informace
- **CDD** – proteinové domény a další data
- ...

## Kombinace několika databází

## Vyhledávání pomocí klíčových slov i pomocí sekvence

The screenshot shows the UniProt homepage interface. At the top, there is a navigation bar with tabs: Search, Blast, Align, Retrieve, and ID Mapping. Below the tabs, there is a search input field labeled "Search in" with "Protein Knowledgebase (UniProtKB)" selected, and a query input field. There are also "Search", "Advanced Search", and "Clear" buttons. The main content area has a "WELCOME" section with a mission statement about providing a comprehensive resource of protein sequence and functional information. It also features a "What we provide" section with tables for UniProtKB, UniRef, UniParc, and Supporting data. Below this is a "Getting started" section with a list of tools: Text search, Sequence similarity searches (BLAST), Sequence alignments, and Batch retrieval. To the right, there is a "NEWS" section with a link to "UniProt release 2013\_02 - Feb 6, 2013" and a "Statistics for UniProtKB" section. There is also a "SITE TOUR" section showing a screenshot of the UniProt interface and a "PROTEIN SPOTLIGHT" section.

**WELCOME**

The mission of UniProt is to provide the scientific community with a comprehensive, high-quality and freely accessible resource of protein sequence and functional information.

**What we provide**

UniProtKB	Protein knowledgebase, consists of two sections: <ul style="list-style-type: none"><li>★ Swiss-Prot, which is manually annotated and reviewed.</li><li>★ TrEMBL, which is automatically annotated and is not reviewed.</li></ul> Includes complete and reference proteome sets.
UniRef	Sequence clusters, used to speed up sequence similarity searches.
UniParc	Sequence archive, used to keep track of sequences and their identifiers.
Supporting data	Literature citations, taxonomy, keywords, subcellular locations, cross-referenced databases and more.

**Getting started**

- Text search
- Sequence similarity searches (BLAST)
- Sequence alignments
- Batch retrieval

**NEWS**

**UniProt release 2013\_02 - Feb 6, 2013**

The smoke's devils | Cross-references to mycoCLAP

# CDD (conserved domain database)

<http://www.ncbi.nlm.nih.gov/Structure/cdd/cdd.shtml>

- Doména – část proteinu s vlastní aktivitou nebo strukturní funkcí (více v bloku o 3D a 4D struktuře proteinů)
- Domény často obsahují sekvenční motiv, který můžeme nalézt u více proteinů s určitou funkcí – **konzervované domény**

# CDD zdroje

Abbreviation	Database Name	Description
<a href="#">SMART</a>	<b>Simple ModularArchitecture ResearchTool</b>	<a href="#">SMART</a> is a web tool for the identification and annotation of protein domains, and provides a platform for the comparative study of complex domain architectures in genes and proteins. SMART is maintained by Chris Ponting, Peer Bork and colleagues, mainly at the EMBL Heidelberg. CDD contains a large fraction of the SMART collection.
<a href="#">Pfam</a>	<b>Protein families</b>	<a href="#">Pfam</a> is a large collection of multiple sequence alignments and hidden Markov models covering many common protein domains and families. Pfam is maintained by Alex Bateman and colleagues, mainly at the Wellcome Trust Sanger Institute. CDD contains a large fraction of the Pfam collection.
<a href="#">COGs</a>	<b>Clusters of OrthologousGroups of proteins</b>	<a href="#">COGs</a> is an NCBI-curated protein classification resource. Sequence alignments corresponding to COGs are created automatically from constituent sequences and have not been validated manually when imported into CDD.
<a href="#">TIGRFAM</a>	<b>The Institute forGenomic Research's database of proteinfamilies</b>	<a href="#">TIGRFAM</a> , a research project of the J. Craig Venter Institute, is a collection of manually curated protein families from The Institute for Genomic Research and consists of hidden Markov models (HMMs), multiple sequence alignments, Gene Ontology (GO) terminology, cross-references to related models in TIGRFAM and other databases, and pointers to literature.
<a href="#">PRK</a>	<b>PRotein K(c)lusters</b>	<a href="#">Protein Clusters</a> is an NCBI collection of related protein sequences (clusters) consisting of <a href="#">Reference Sequence</a> proteins encoded by complete prokaryotic and chloroplast plasmids and genomes. It includes both curated and non-curated (automatically generated) clusters.

# Úloha

# PROPSEARCH – Když selže alignment

<http://abcis.cbs.cnrs.fr/propsearch/>

- Neprovádí alignment
- Porovnává složení (zastoupení) aminokyselin, molekulovou hmotnost, izoelektrický bod, atd.  
  > celkem 144 parametrů
- Snaha zařadit protein do funkční rodiny
- **Další studium sekvence nutné !**

# Úloha

➤ Následující sekvenci hypotetického proteinu analyzujte pomocí serveru **Propsearch**.

Sekvence:

## Brief introduction to PROPSearch ...

Please cite: Uwe Hobohm and Chris Sander: "A sequence property approach to searching protein databases", J.Mol.Biol. 251 (1995) 390-399

For a successful application, please have a look in: Uwe Hobohm and Chris Sander: "Does the HIV Nef protein mimic the MHC?", FEBS-letters 333(1993)211-213.

### Query sequence

Paste your sequence into the text area. The sequence may contain **ONLY amino acid residue characters (one letter code)** and carriage returns but no blanks AND NO position numbers (All characters apart from amino acid letters might now be truncated by PropSearch).

**SMART** <http://smart.embl-heidelberg.de/>

Analýza zastoupení proteinových domén

Prohledávání dle sekvencí, domén, taxonů

**STRING** <http://string-db.org>

Funkční vazby různých proteinů

Na základě výskytu v genomu, zapojení do  
metabolických drah, textového hledání,...

# Úloha

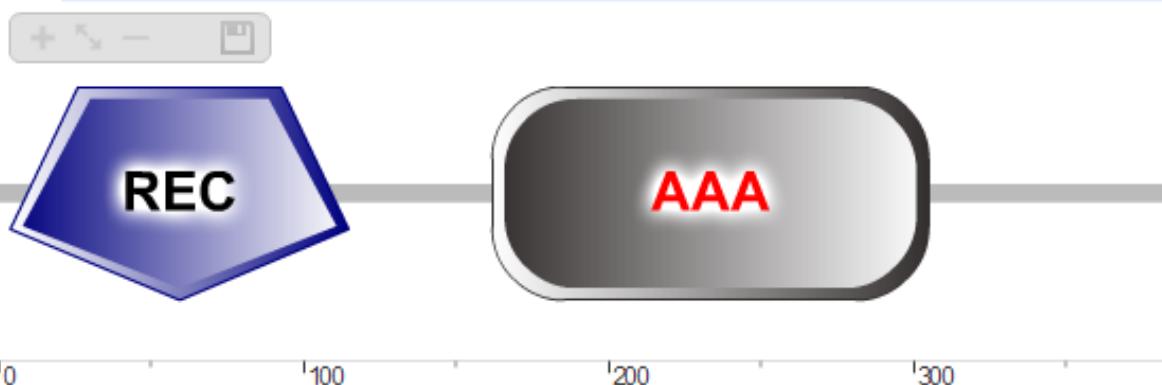

➤ Pomocí serveru **SMART** analyzujte domény v následující sekvenci a následně pomocí serveru **STRING** prozkoumejte pravděpodobné zapojení v metabolismu.

Domains within *Chlamydia trachomatis* 434/Bu protein **B0B841\_CHLT2 (B0B841)**

Two component system response regulator

Information	Architecture	Interactions	Orthology
Length	386 aa		
Source database	UniProt		
Identifiers	B0B841_CHLT2, B0B841		

The SMART diagram above represents a summary of the results shown below. Domains with scores less significant than established cutoffs are not shown in the same piece of sequence; the priority for display is given by SMART > PFAM > PROSPERO repeats > Signal peptide > Transmembrane > Coiled coil > Unstructured. Domains shown in the above diagram are marked as 'overlap' in the right side table below.

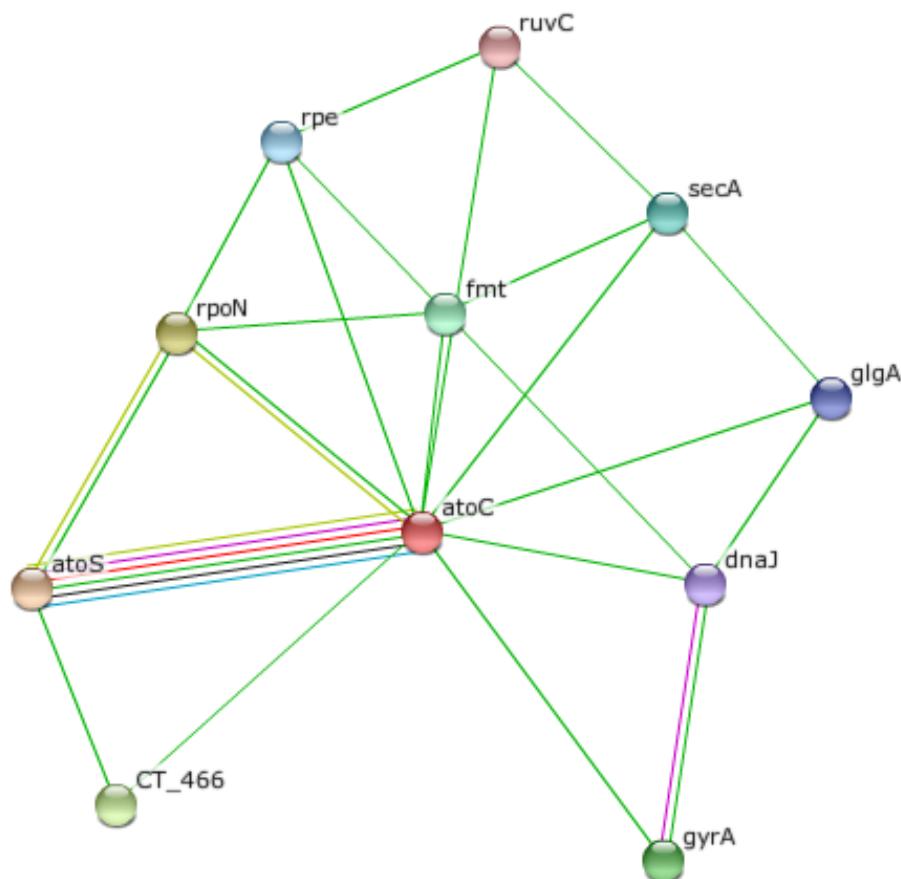

## Confidently predicted domains, repeats, motifs and features:

## Features NO

Name	Start ▲	End	E-value	▼
REC	4	115	4.25e-32	▲
AAA	162	305	6.98e-7	▼

Name	Start ▲	End	▼
low complexity	6	1	1

Click on a row to highlight the feature in the diagram

This is the **evidence view**. Different line colors represent the types of evidence for the association.

# Porovnání predikce a experimentu

- **Predikce:**
  - + Rychlá (sekundy-hodiny), levná/dostupná (Freeware)
  - + Spolehlivá pro známé (!) proteiny a pro proteiny s vysokou homologií
  - Pouze kvalitativní
  - Málo spolehlivá pro neznámé proteiny
  - Nepoužitelná pro unikátní případy
- **Experiment:**
  - + Teoreticky použitelný pro libovolný protein
  - Finančně (i miliony Kč) a časově náročný (minuty-hodiny + příprava vzorku = týdny až roky)

# Rady do života

- ★ O daném proteinu získej maximum informací ★
- ★ Kombinuj různé predikční programy a přístupy ★
- ★ Kriticky kontroluj SW výstupy ★
