**Abstract:** Six tests for the detection of West Nile virus (WNV) antibodies in the serum of experimentally infected chickens were compared. The tests included the hemagglutination-inhibition test (HIT), immunoglobulin M (IgM)-capture enzyme-linked immunosorbent assay (ELISA) with WNV-infected mouse brain antigen, immunoglobulin G (IgG) indirect ELISA with tickborne encephalitis viral antigen, the microtitre virus neutralization test, the standard plaque reduction neutralization test (PRNT), and the microtitre PRNT (micro-PRNT). Thirty adult chickens, intravenously and intramuscularly inoculated with 101 plaque-forming units (PFU) of WNV strain Egypt 101, were bled and given a booster of 10(7) PFU at 7, 15, and 21 d postinoculation; the final blood collection was on day 28. Although the micro-PRNT is capable of detecting the highest antibody titres during both early and late infection, because of the technical complexity and time requirements of this test a combination of IgM and IgG ELISAs is recommended for serologic screening. Serum samples that give positive results in the ELISAs can then be tested by the micro-PRNT to determine the specificity of antibodies to WNV.

**KeyWords Plus:** INFLUENZA-VIRUS; NEUTRALIZATION; IGM

- Bio Mail

The screenshot shows a Mozilla Firefox browser window displaying the BioMail Login page. The browser's address bar shows the URL <http://www.biomail.org/>. The page title is "BioMail Login".

The main content area of the page includes:

- A navigation bar with links for [Login](#), [Language](#), [FAQ](#), and [About](#).
- A message: "New references from MEDLINE to your email account".
- A note: "If you are not registered yet, or want to open a new account, click on the 'Open new account' button." Below this is a button labeled "Open a new account".
- A note: "If you want to change your existing account, enter your username and password to access your BioMail configuration data." Below this are input fields for "Username:" and "Password:", a "Login" button, and a link "I forgot my password".

The right sidebar contains:

- The website logo and URL [www.biomail.org](http://www.biomail.org).
- A "Free" logo featuring a penguin.
- A list of language options: Home page, Quick Help, English, Chinese, French, German, Japanese, Italian, Russian, Spanish, Turkish, Ukrainian, Download, and Users.
- A section titled "Help to free scientific information".
- A section titled "This site is hosted by" with the logo of the State University of New York at Stony Brook University Hospital and Medical Center.
- Small text at the bottom: "SUNY at Stony Brook disclaimer" and "New developments of BioMail are supported by grant #1507134007763-01 from the National Library of Medicine".

The Windows taskbar at the bottom shows the Start button and several open applications, including "Doručená pošta - ...", "International Jour...", "BioMail Login - Mo...", "D:\vyuka\vedeck...", "H:\vedecká preze...", "Angličtina - Lingea...", and "5 Microsoft Pow...". The system clock shows 12:17.

# Separátní výtisky

- Výtisky článků poskytované autorům zdarma
- Reprint, i když ve skutečnosti se zpravidla jedná o offprint = současně tištěná část časopisu
- Žádost o separát – běžná forma vědecké komunikace
- Tištěná žádanka

- E-mail
- Dnes je separát často nahrazován pdf souborem zasílaným elektronicky
- V případě kladně reagujícího autora se jedná o rychlý zdroj informací

<b>Abstract</b>	Glass slides are widely used in high-throughput analysis and are available commercially with surfaces activated, etched, and channeled. Thin glass microscope slides are shown here to be suitable sample supports for matrix-assisted laser desorption/ionization (MALDI) mass spectrometry. As a demonstration, lectins immobilized on glass slides with activated surfaces are used to concentrate and purify agglutinated Bacillus spores. It is expected that such slides will provide a rapid, inexpensive way to evaluate and implement new strategies involving MALDI MS readout
