Protein gene prediction
Protein gene prediction
Protein gene prediction
tRNA gene prediction
rRNA gene prediction

Search for approximate repeats in complete DNA sequences
Identification of genomic islands

Compare a novel sequence with those contained in nucleotide and protein databases
Search for domains/motifs in the InterPro database

Compare a query sequence to the COG (Cluster of Orthologous Groups of proteins) database

Detection of enzymatic function in a fully sequenced genome, based on all sequences available in the ENZYME database

BLAST search on the Gene Ontology database

Prediction of bacterial protein subcellular localization

Prediction of transmembrane helices in protein sequences

Prediction of signal peptide cleavage sites in protein sequences

Multiple genome alignments in the presence of large-scale evolutionary events
Define the set of backbones and loops in closely related bacterial genomes

Comparative genome analysis and visualization tools for multiple genome alignments

Computation of gene order conservation (syntenies) between available bacterial genomes
Metabolic network reconstruction and comparative pathway analysis

Metabolic pathway reconstruction

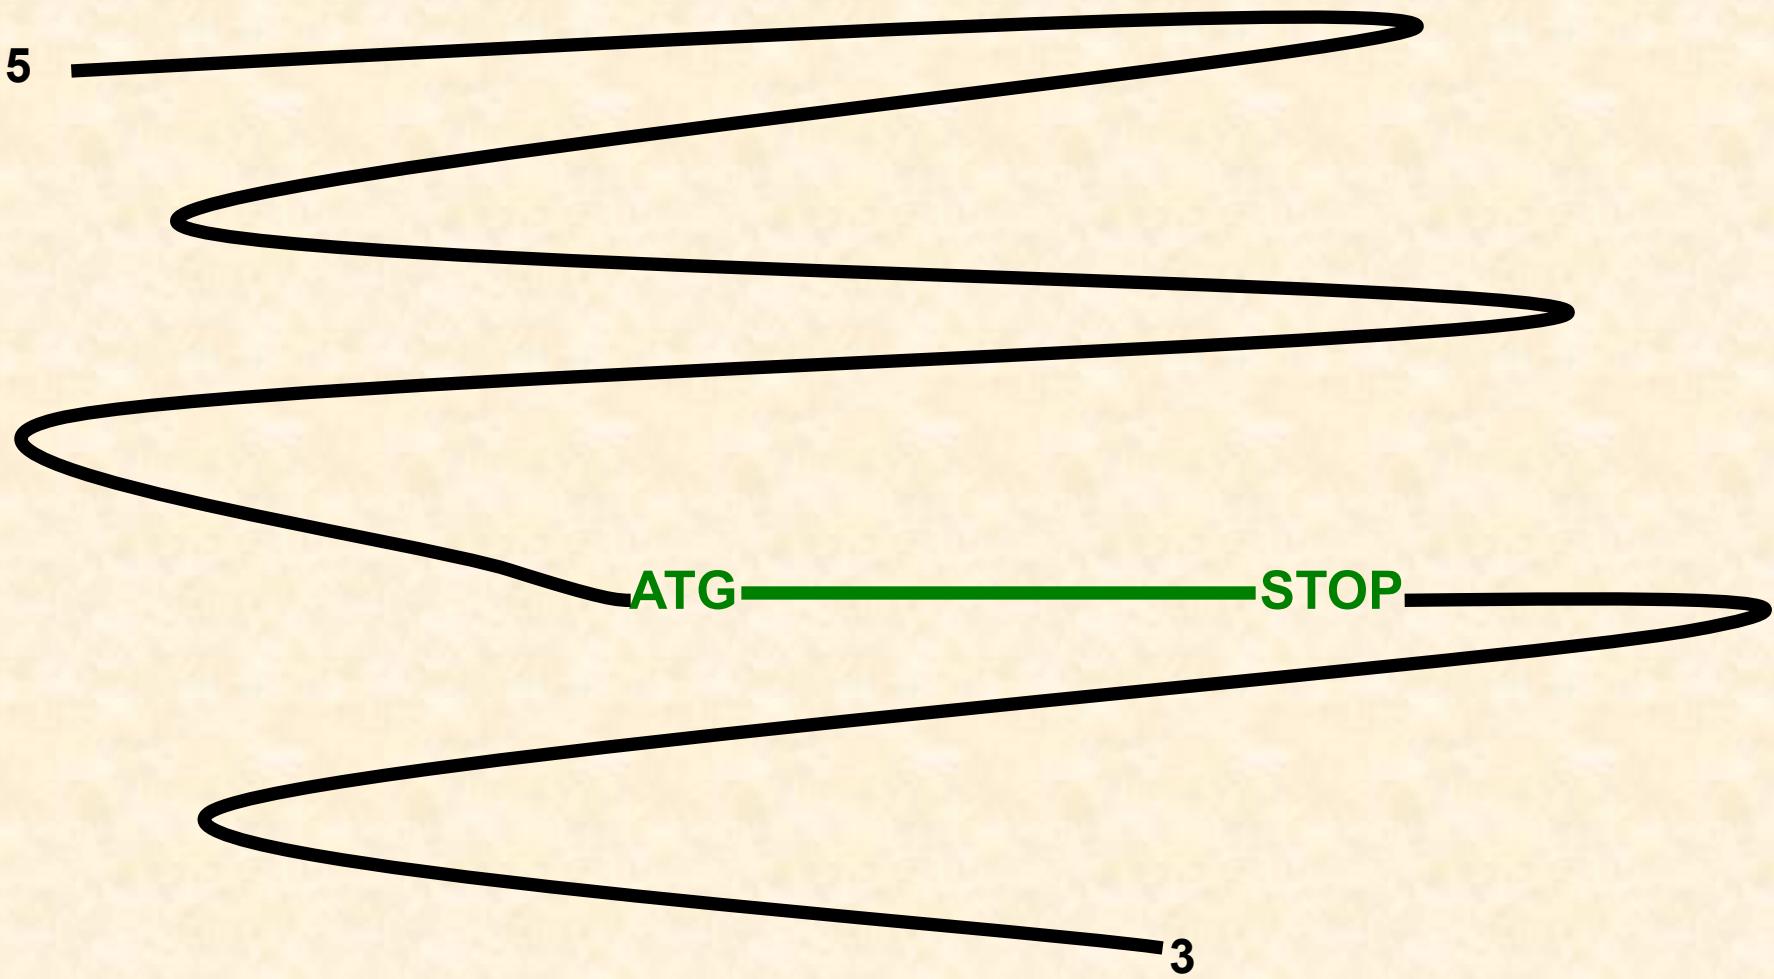

Comparative analysis and annotation tools using the subsystem approach

Search Tool for the Retrieval of Interacting Proteins

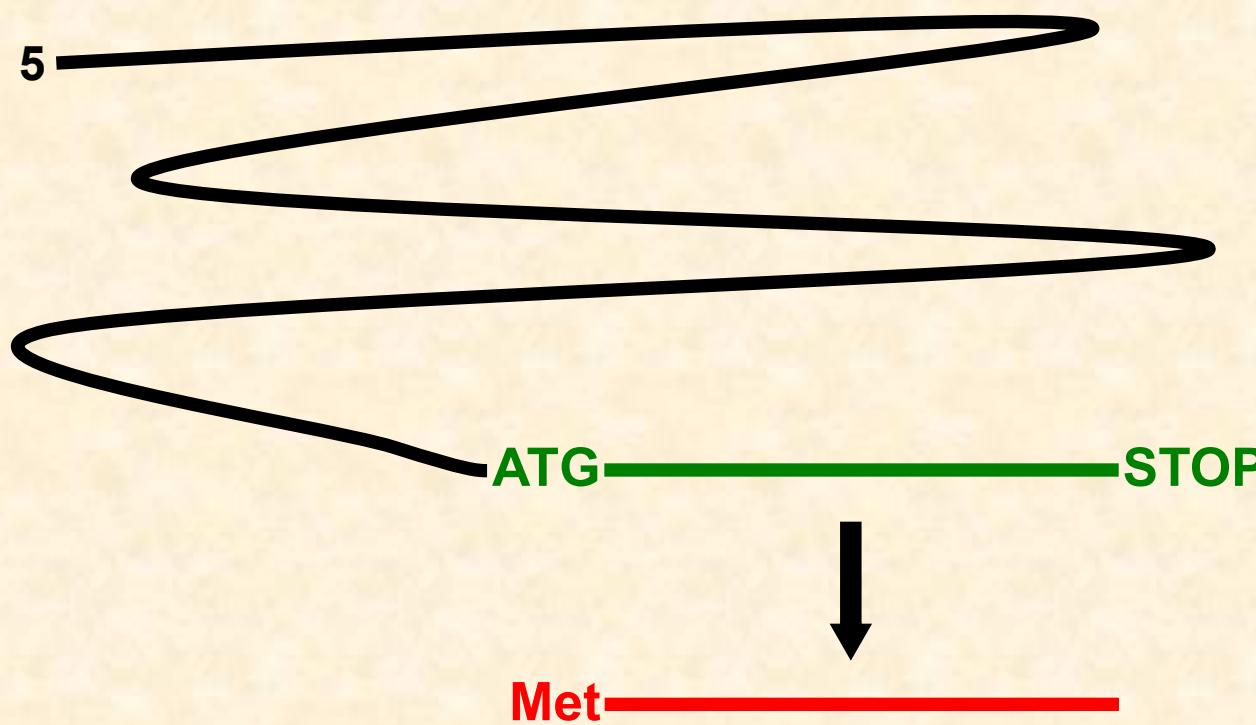

Reconstruction of phylogenetic relationships of complete microbial genomes

Automatically assign sequences to homologous gene families from the HOGENOM database

Predikce genů kódujících proteiny

- **Prokaryotické geny**

Nepřerušované úseky DNA mezi **startovním kodonem** (ATG, GTG, TTG, CTG) a **stop kodonem** (TAA, TGA, TAG).

- **Úsek kóduje protein, který je podobný již dříve popsánému proteinu (prohledávání DATABÁZÍ pomocí ALIGNMENTU).**

Překlad DNA sekvence

- **ExPASy**

<http://www.expasy.org/tools/dna.html>

- **ORF Finder (NCBI)**

<http://www.ncbi.nlm.nih.gov/gorf/gorf.html>

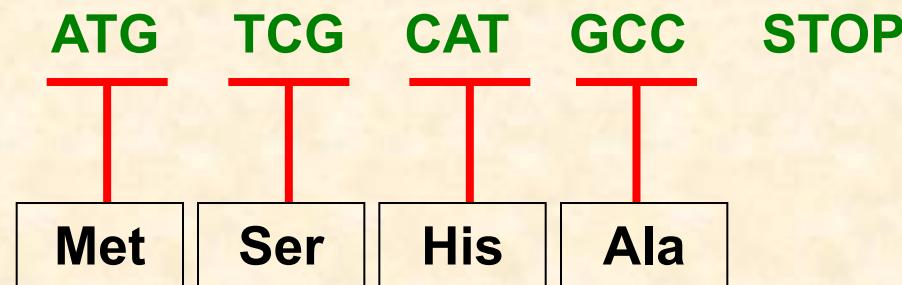

Překlad DNA sekvence

The table shows the 64 codons and the amino acid for each. The direction of the mRNA is 5' to 3'.

		2nd base			
		U	C	A	G
1st base	U	UUU (Phe/F) Phenylalanine UUC (Phe/F) Phenylalanine	UCU (Ser/S) Serine UCC (Ser/S) Serine	UAU (Tyr/Y) Tyrosine UAC (Tyr/Y) Tyrosine	UGU (Cys/C) Cysteine UGC (Cys/C) Cysteine
	C	UUA (Leu/L) Leucine UUG (Leu/L) Leucine	UCA (Ser/S) Serine UCG (Ser/S) Serine	UAA Ochre (Stop) UAG Amber (Stop)	UGA Opal (Stop) UGG (Trp/W) Tryptophan

Opravdu ORF kóduje protein?

- ORF kóduje protein, který je podobný již dříve popsanému proteinu (prohledávání DATABÁZÍ pomocí ALIGNMENTU) = **nejspolehlivější ověření.**
- **Nástroje pro překlad DNA jsou propojeny s prohledáváním databází.**
