Introduction to 2D NMR & Homonuclear correlation - COSY

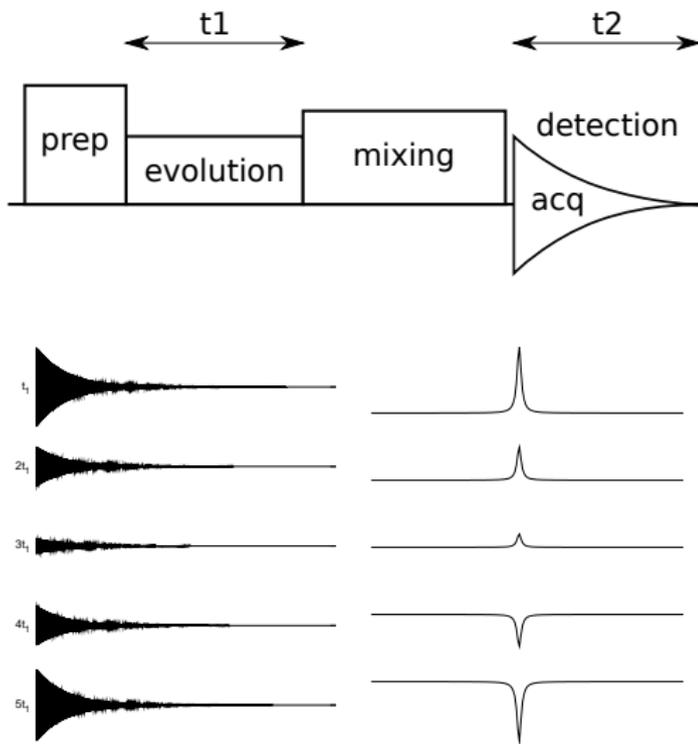

Ondřej Jurček
ondrej.jurcek@ceitec.muni.cz

March 27, 2017

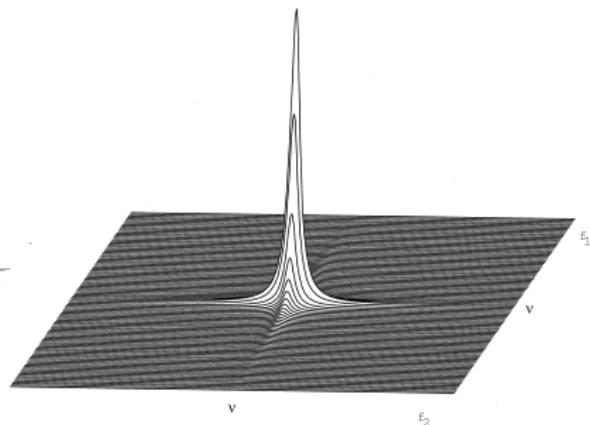

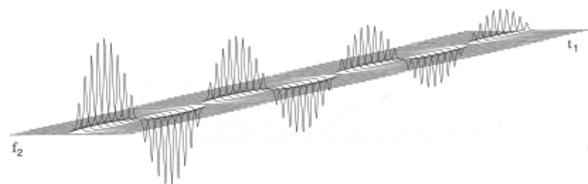

2D NMR

Second dimension f_1

- ▶ preparation period \implies coherence
- ▶ evolution period $t_1 \xrightarrow{\text{FT}} f_1$
 - ▶ increments
 - ▶ evolution of coherence
- ▶ mixing period
 - ▶ transfer of encoded magnetisation
 - ▶ measurable signal
- ▶ detection of signal $t_2 \xrightarrow{\text{FT}} f_2$

2D NMR

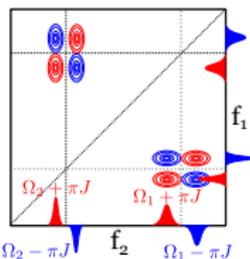

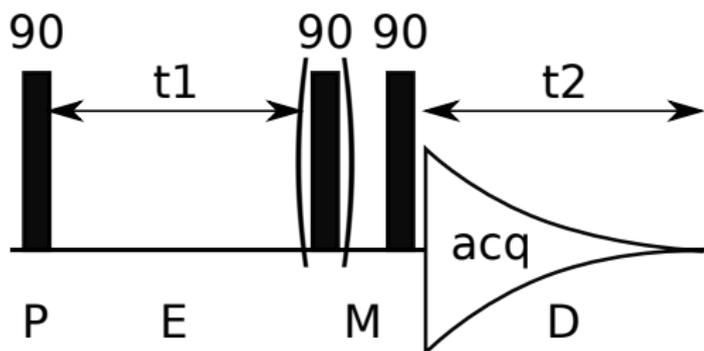

2D spektrum

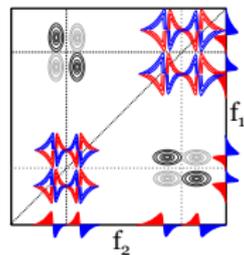

- ▶ FT in t_1 - modulated 1D spectra
- ▶ FT in t_2 - 2D spectrum

COSY

- ▶ easiest 2D experiment
- ▶ **correlates H nuclei based on $^{2/3}J$ coupling**
- ▶ through 2, 3, (4) bonds
- ▶ antiphase off-diagonal crosspeak between coupled atoms
- ▶ DQF-COSY - modification of basic sequence, diagonal crosspeaks in absorption phase

$$1/2[\cos(\Omega t_1 + \pi J t_1) - \cos(\Omega t_1 - \pi J t_1)]$$

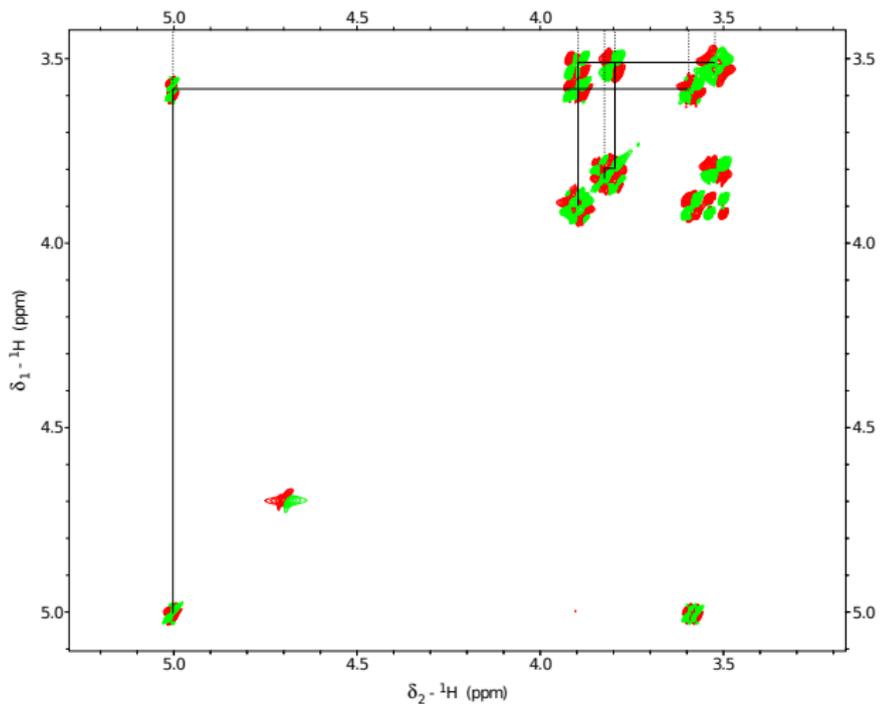

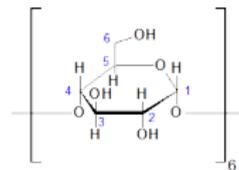

$$1/2[\sin(\Omega t_1 + \pi J t_1) + \sin(\Omega t_1 - \pi J t_1)]$$

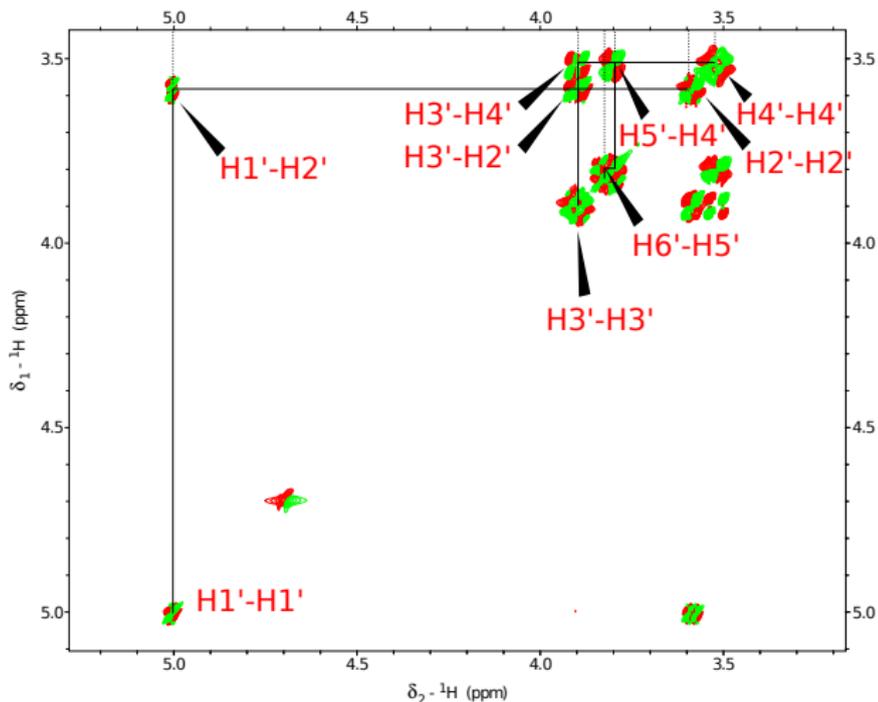

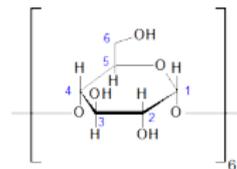

Hints for beginners

- ▶ Determination of **individual spin systems** - sharing **off-diagonal crosspeaks**
- ▶ Isolated protons - only diagonal crosspeak
- ▶ Already known rules: symmetry, diastereotopicity, most shielded/deshielded atoms etc.
