

## HOMEWORK 12

This should be a combination of some exposition and actual exercises:

Let  $Y$  be a path connected CW-complex. Then  $\pi_n(Y) = 0$  iff any morphism  $f : S^n \rightarrow Y$  can be extended to  $F : D^{n+1} \rightarrow Y$ .

$$\begin{array}{ccc}
 S^n & \xrightarrow{f} & Y \\
 \downarrow & \nearrow F & \\
 D^{n+1} & & 
 \end{array}$$

This is a rather easy observation. The direction  $\Leftarrow$  says that any map from a sphere can be extended to a map  $F$ . Then  $F$  describes a nullhomotopy of  $f$ .

The direction  $\Rightarrow$  says that any map  $f : S^n \rightarrow Y$  is nullhomotopic. This means that there exists a nullhomotopy  $H : S^n \times I \rightarrow Y$ , where  $H|_{S^n \times \{1\}} = f$  for some  $y \in Y$ .

We can imagine that we glue  $D^{n+1}$  to the top of the cylinder  $S^n \times I$  and we have a map  $H \cup \{y\} : S^n \times I \cup D^{n+1} \times \{1\}$ . Thus by lifting extension property  $H \cup \{y\}$  can be lifted to a map  $G : D^{n+1} \times I \rightarrow Y$ . We define  $F = G|_{D^{n+1} \times \{1\}}$ .

**Exercise 1.** Prove the following theorem: Let  $X, A$  be a pair of CW-complexes and let  $Y$  be a path-connected space. Then  $f : A \rightarrow Y$  can be extended to a map  $F : X \rightarrow Y$  if  $\pi_n(Y) = 0$  for all  $n$  such that  $X \setminus A$  has cells in dimension  $n$ . (Hint: use the preceding exercise and extend  $f$  to skeletons  $X^i$ ).

**Exercise 2.** By presenting a counterexample, disprove the following: Let  $X, A$  be a pair of CW-complexes and let  $Y$  be a path-connected space. Then  $f : A \rightarrow Y$  can be extended to a map  $F : X \rightarrow Y$  if  $\pi_n(Y) = 0$  for all  $n$  such that  $X \setminus A$  has cells in dimension  $n$ . (Hint: Assume  $(X, A) = (D^{n+1}, S^n)$ )

Let us have the following diagram:

$$\begin{array}{ccc}
 & & F \\
 & \nearrow f' & \downarrow i \\
 S^n & \xrightarrow{f} & E \\
 \downarrow & \nearrow h & \downarrow p \\
 D^{n+1} & \xrightarrow{g} & B
 \end{array}$$

where  $p : E \rightarrow B$  is a fibration of path-connected spaces with fibre  $F$  such that  $\pi_n F = 0$ . We will prove, that there exists a diagonal  $h$  that will make everything commute. First, we notice that as  $pf : S^n \rightarrow B$  can be extended to  $g : D^{n+1} \rightarrow B$  it must be nullhomotopic and the nullhomotopy is provided by  $g$ . Let  $b_0 \in B$  be the point in the center of the disc  $g(D^{n+1})$ . Then we have a homotopy  $\hat{g} : S^n \times I \rightarrow B$ , which is  $pf$  on one end and  $b_0$  on the other end.

*Date:* May 13, 2013.

By the lifting property of fibration, we then get a lift  $\hat{h}$  in the diagram

$$\begin{array}{ccc} S^n & \xrightarrow{f} & E \\ \downarrow & \nearrow \hat{h} & \downarrow p \\ S^n \times I & \xrightarrow{\hat{g}} & B \end{array}$$

We can see that  $\hat{h}$  is the homotopy between  $f$  and some  $f'$ , where  $pf' = b_0$  and  $f'$  is therefore a mapping into the fibre  $F$  (or its image  $i(F)$ ). But as  $\pi_n(F) = 0$ , we can see that  $f'$  is nullhomotopic. Let  $h'$  be the nullhomotopy of  $f'$ . We will interpret this as a map  $h' : D^{n+1} \rightarrow i(F)$ . Now we can glue the disc  $h'$  to top of the cylinder  $S^n \times I$ . Thus we have a map  $h = \hat{h} \cup \tilde{h} : D^{n+1} (\sim D^{n+1} \cup S^n \times I) \rightarrow E$ . This map is the lift we were originally looking for.

**Exercise 3.** Prove the theorem: Let  $(X, A)$  be a CW-pair and  $p : E \rightarrow B$  a fibration of path connected spaces such that  $\pi_n(F) = 0$  whenever there is a cell of dimension  $n + 1$  in  $X \setminus A$ . Then there exists a lift in the following diagram:

$$\begin{array}{ccc} A & \xrightarrow{f} & E \\ \downarrow & \nearrow h & \downarrow p \\ X & \xrightarrow{g} & B \end{array}$$

**Exercise 4.** Let  $(X, A)$  be a CW-pair and  $p : E \rightarrow B$  a fibration of path connected spaces which is also a weak equivalence. Prove, that there exists a lift in the following diagram:

$$\begin{array}{ccc} A & \xrightarrow{f} & E \\ \downarrow & \nearrow h & \downarrow p \\ X & \xrightarrow{g} & B \end{array}$$
