

Monitory

využívají dvou vlastností lidského oka

a) setrvačnost oka

b) mechanismus barevného vidění

The Retina

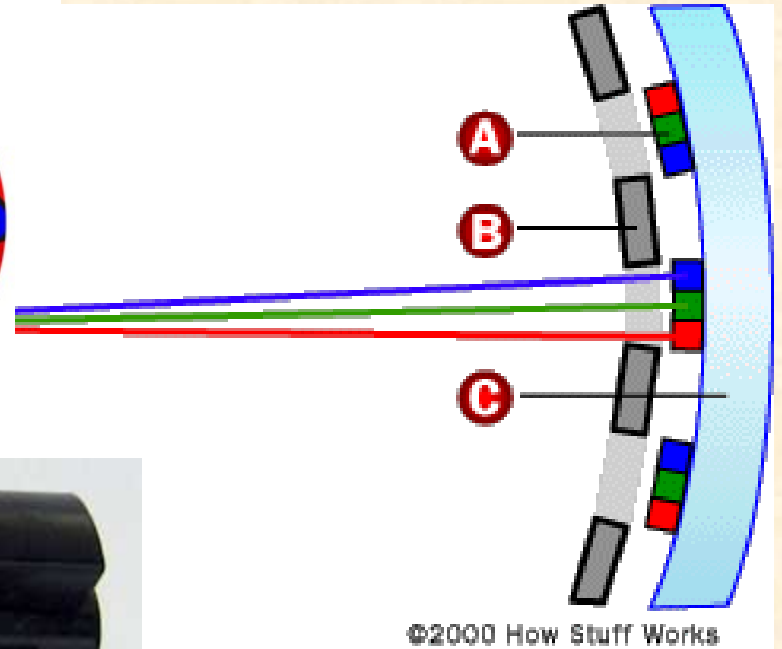

barevný monitor

CRT – cathode ray tube

LCD – liquid crystal display

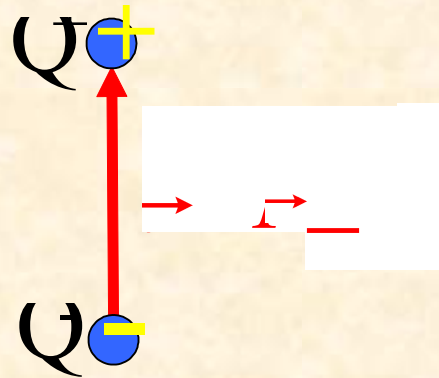

tekuté krystaly

dlouhé molekuly, které se
mohou různě uspořádat

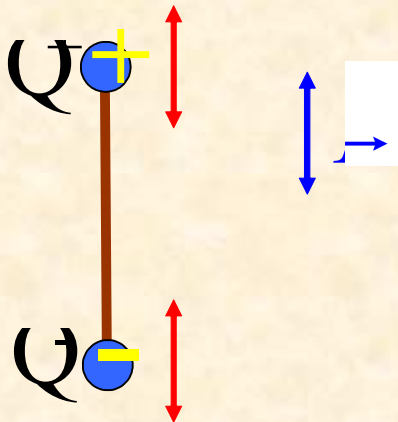

Polarizace absorpcí – polarizační filtry

elektrický dipól

dipól v elektrickém poli - absorpce

Relationship Between Long-Chain Molecule Orientation and the Orientation of the Polarization Axis

When molecules in the filter are aligned vertically, the polarization axis is horizontal.

When molecules in the filter are aligned horizontally, the polarization axis is vertical.

Struktura LCD buňky

pasivní display

adresování pixelu

aktivní display

TFT - Thin Film Transistor

na průchod

na odraz

na odraz i
na průchod

Plazmové monitory

plazma – ionizovaný plyn

ionizace nárazem v elektrickém poli

elektrický výboj

emise elektromagnetického záření

elektrický výboj v inertním plynu (Ar, Ne, Xe)

A schematic matrix electrode configuration in an AC PDP

Velkoplošné LED displeje
