# Literature

- - **Fred H. Wilt and Sarah Hake, Principles of Developmental Biology** (W.W. Norton & Company, New York, London, 2004)
  - **Scott F. Gilbert, Developmental Biology**, eighth edition (Sinauer Associates, Inc., Publishers Sunderland, Massachusetts, USA, 2006)
  - Dubová J., Hejátko J., Friml J. (2005) Reproduction of Plants, in Encyclopedia of Molecular Cell Biology and Molecular Medicine (ed, R. A. Meyers), pp. 249 – 295. Wiley-VCH, Weinheim, Germany
  - Selected original papers in scientific journals

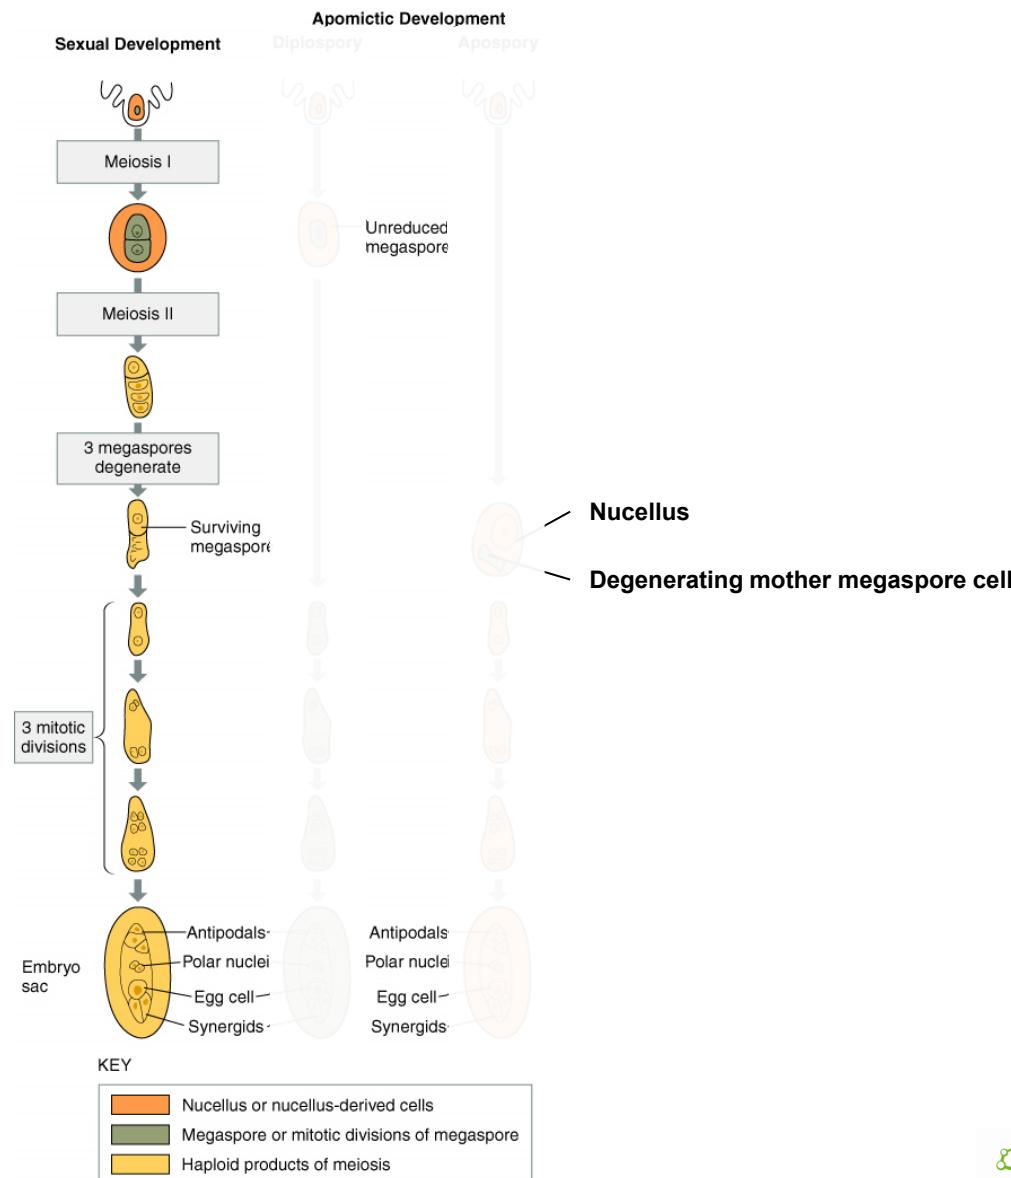

# Outline

- Sexual and asexual plant reproduction
- Plant life cycle
- Initiation of flowering
- Determination of floral organ identity
- Microgametogenesis
- Megagametogenesis
  - Female gametophyte patterning
- Pollen tube growth, guidance and fertilization
- Endosperm and seed formation

# Outline

- Sexual and asexual plant reproduction

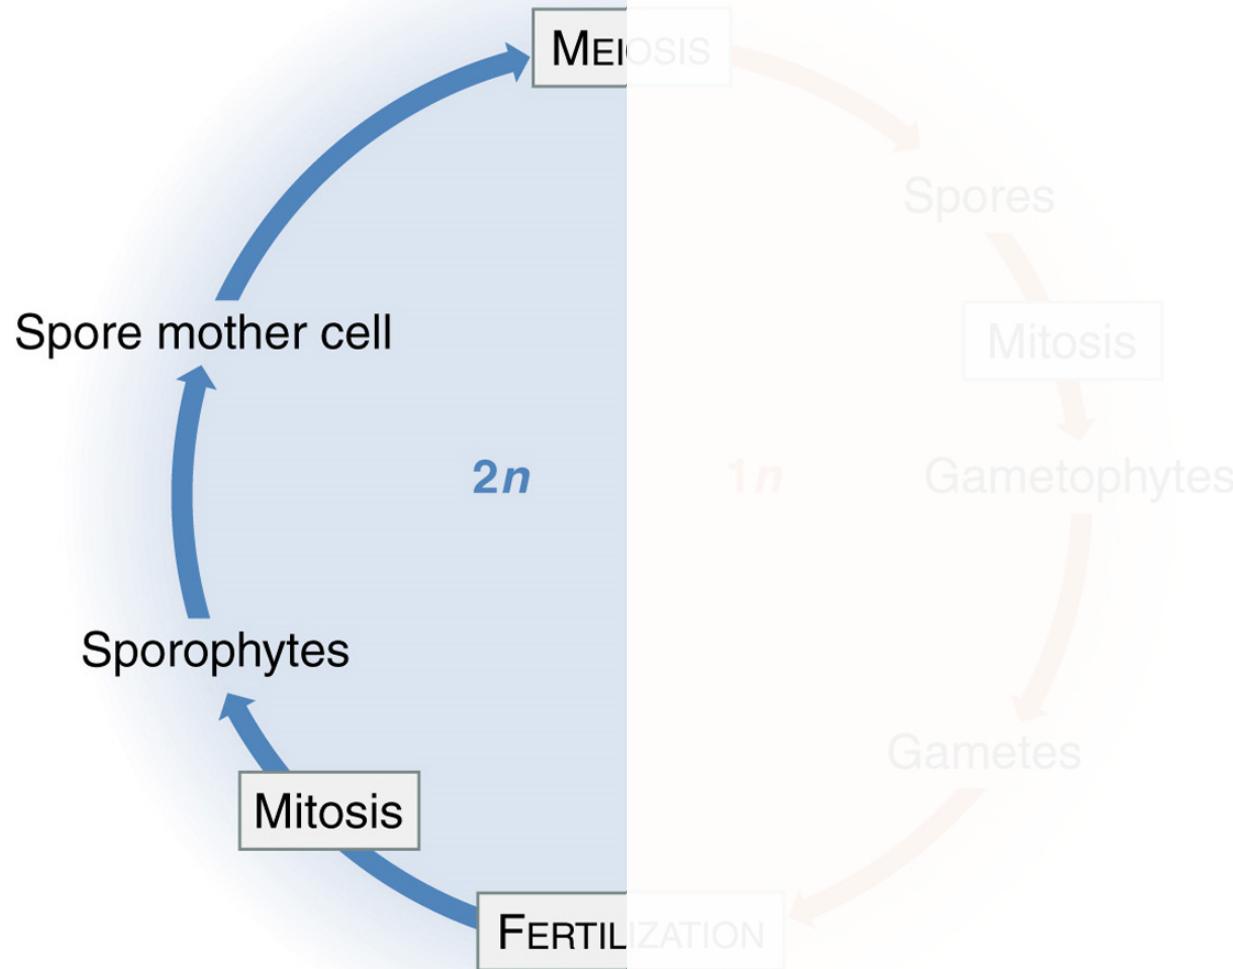

# Asexual Plant Reproduction

# Outline

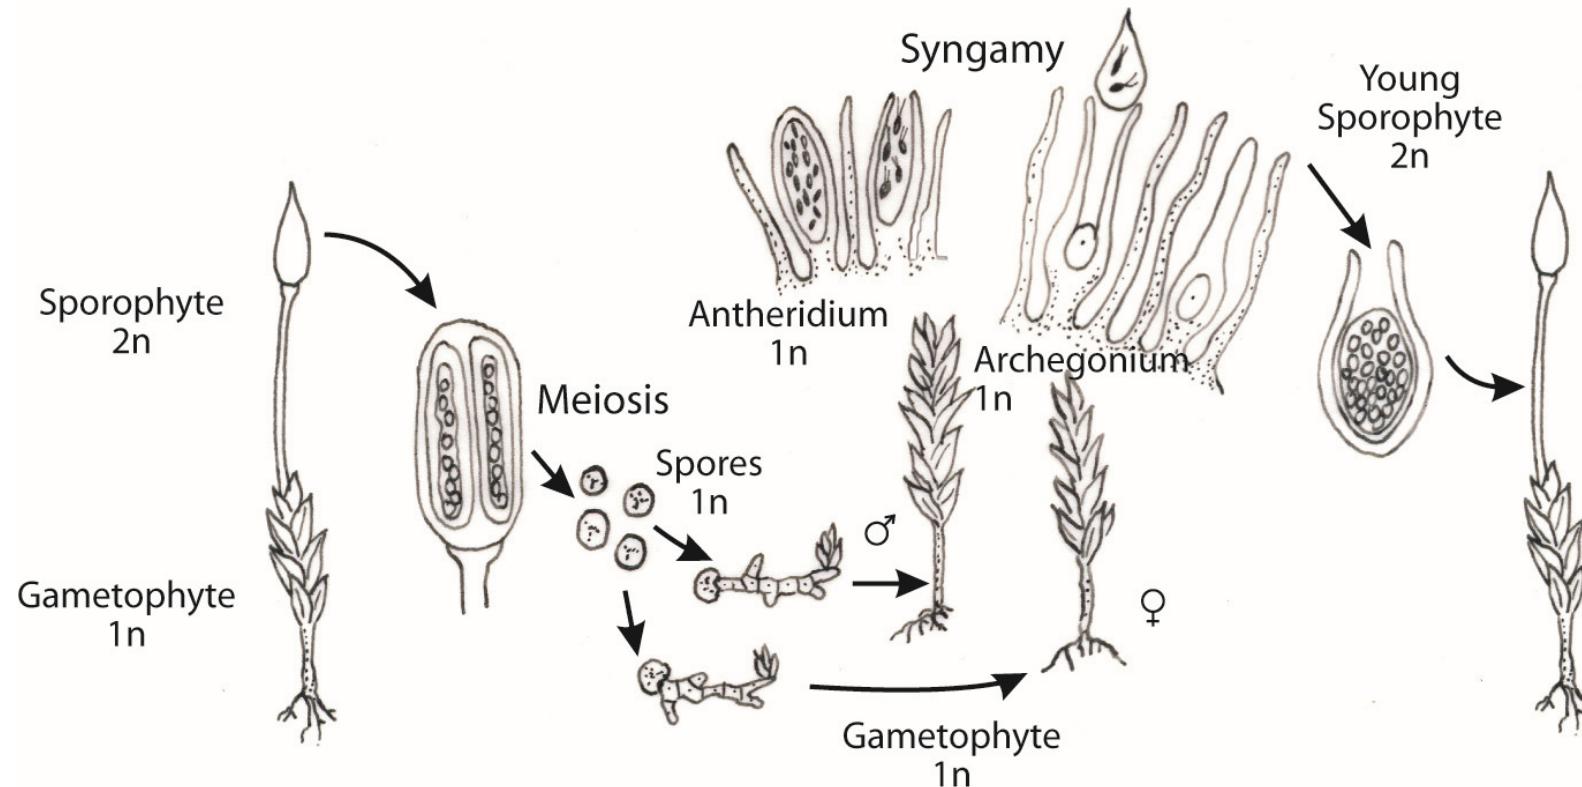

- Sexual and asexual plant reproduction
- Plant life cycle

# Plant Life Cycle

# Plant Life Cycle

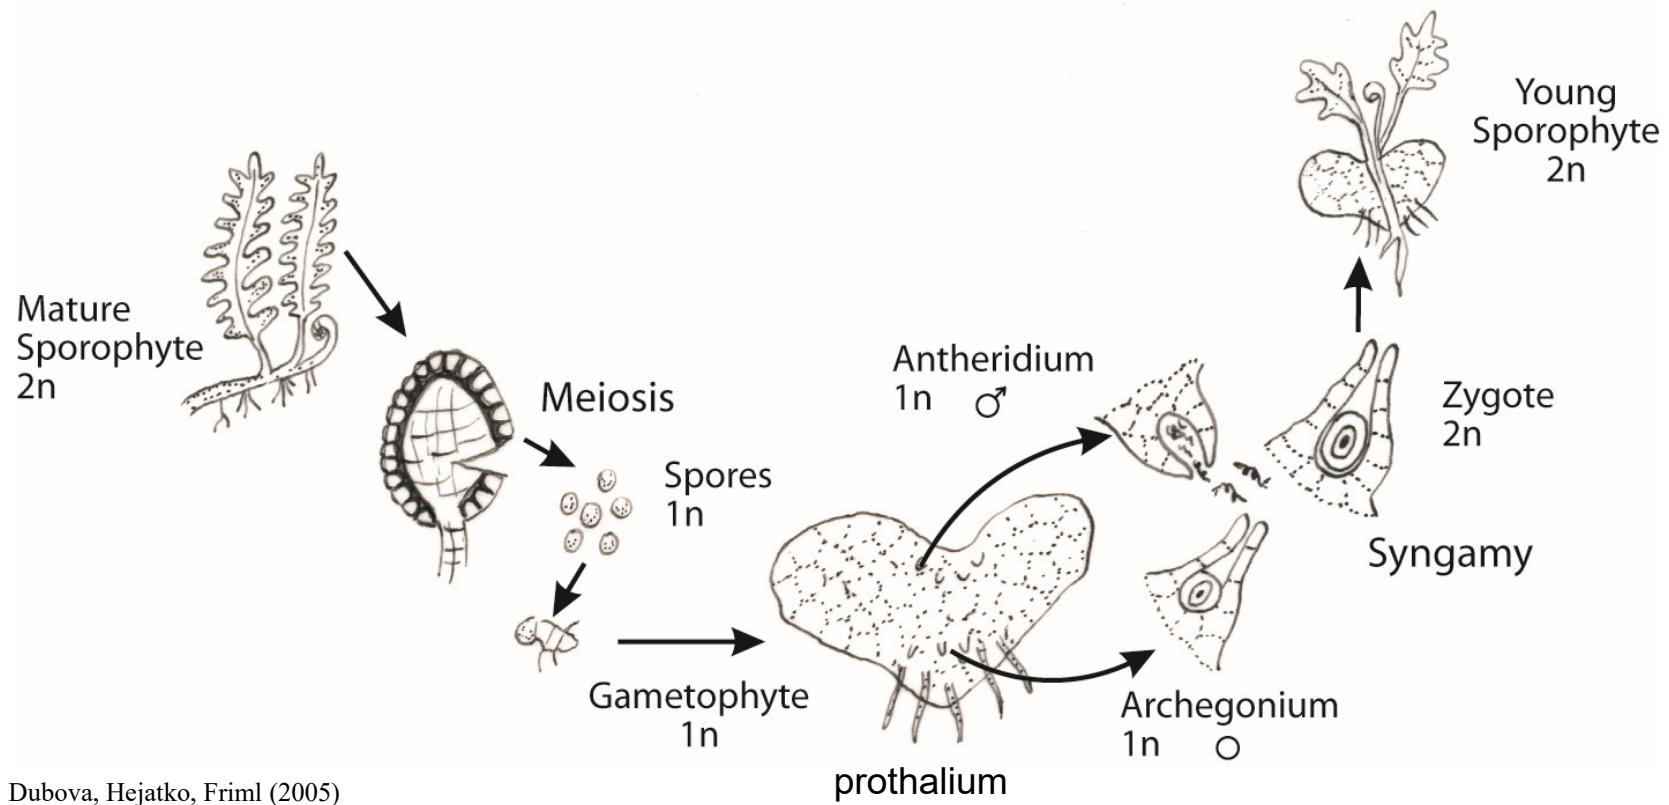

## Mosses

Dubová, Hejatko, Friml (2005)

# Plant Life Cycle

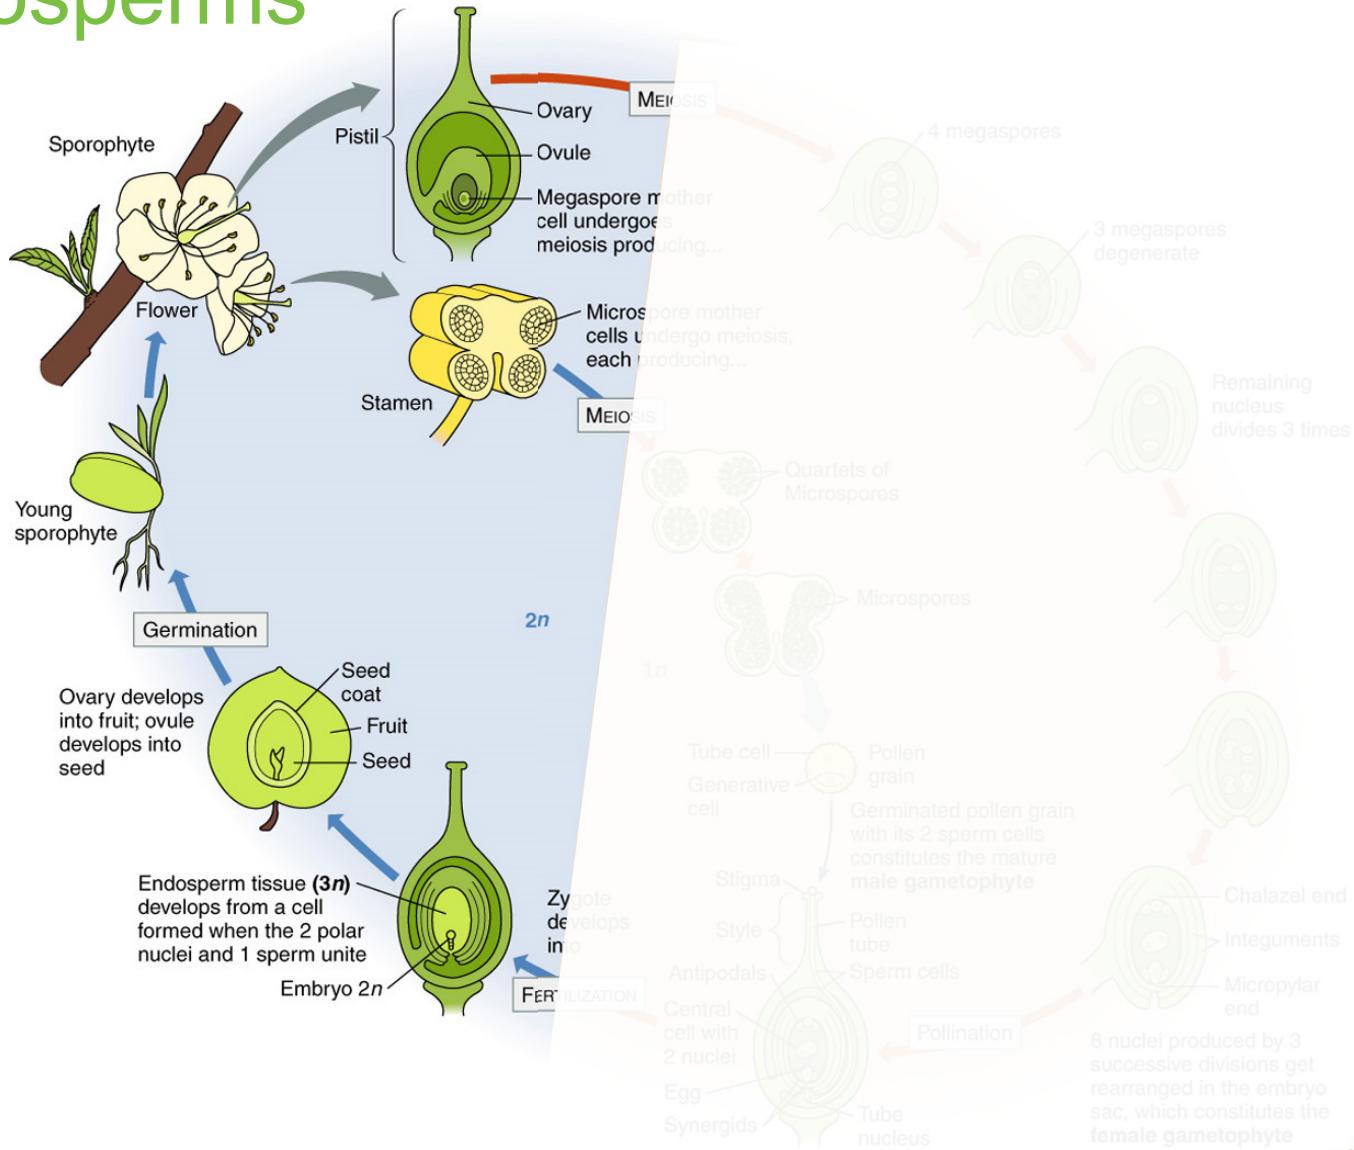

## Ferns

Dubová, Hejatko, Friml (2005)

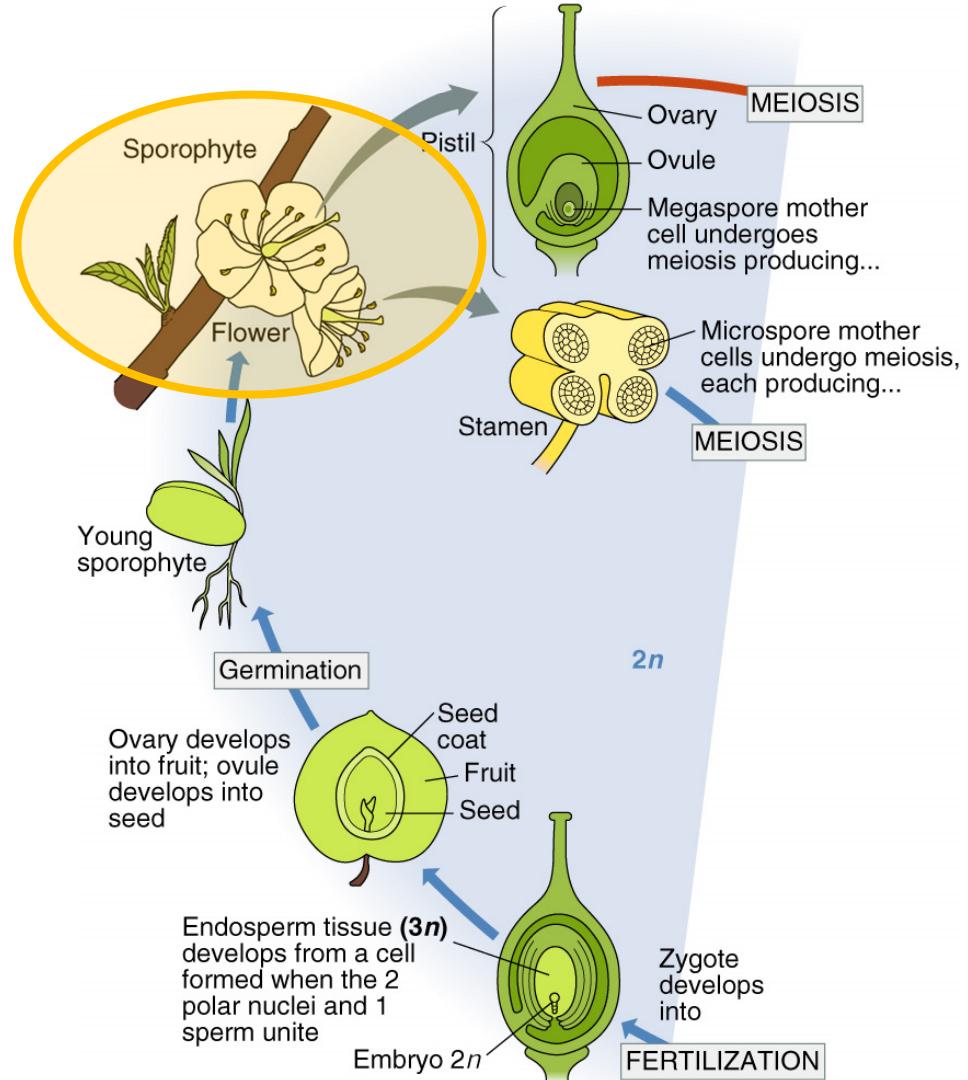

# Plant Life Cycle

## Angiosperms

# Plant Life Cycle

## Angiosperms

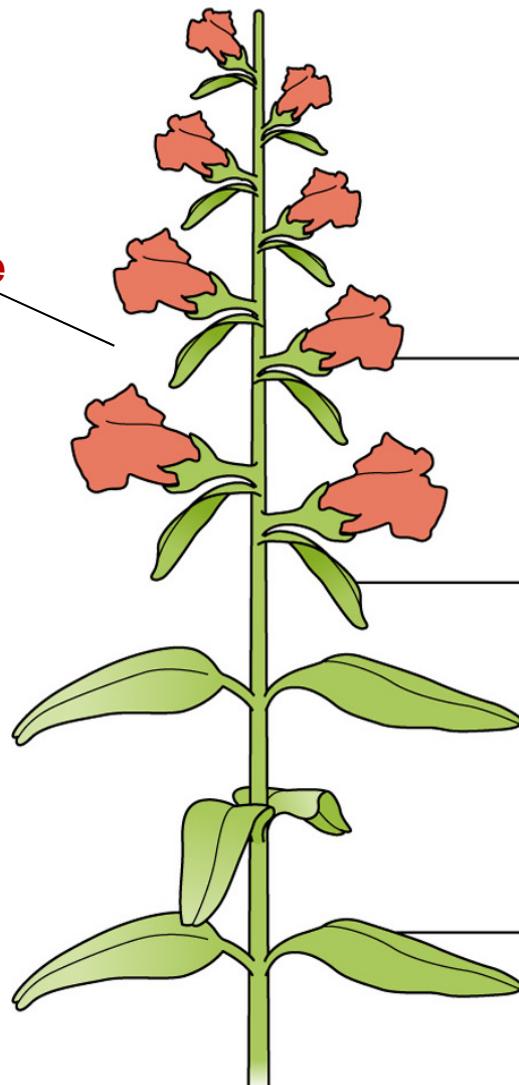

# Outline

- Sexual and asexual plant reproduction
- Plant life cycle
- Initiation of flowering

# Flowering

Uzavřené  
květenství  
(monotelické)  
**Determinate  
inflorescence**

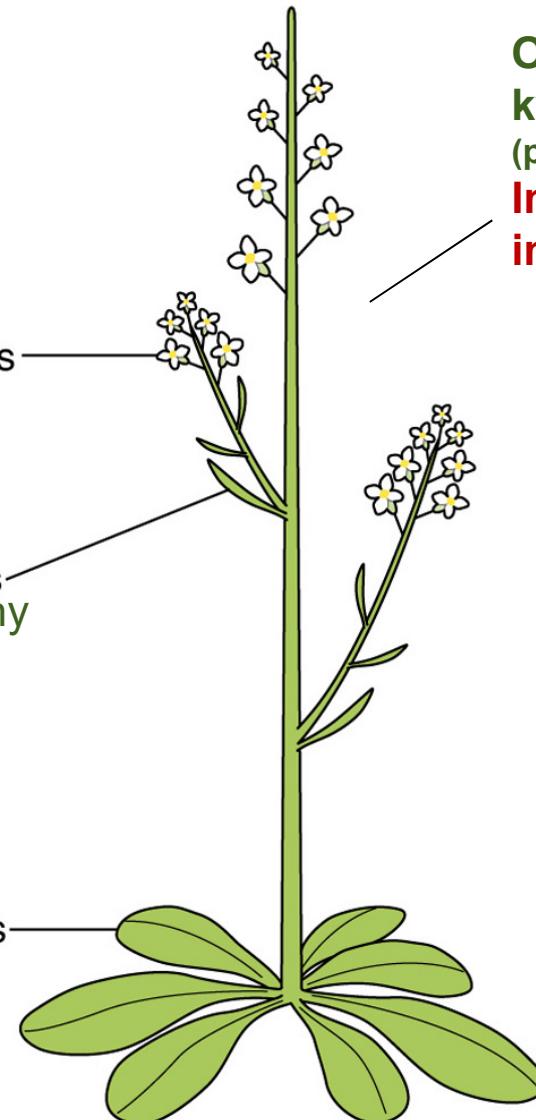

*Antirrhinum*

Flowers

Bracts  
Listeny

Leaves  
Listy

Otevřené  
květenství  
(polytelické)  
**Indeterminate  
inflorescence**

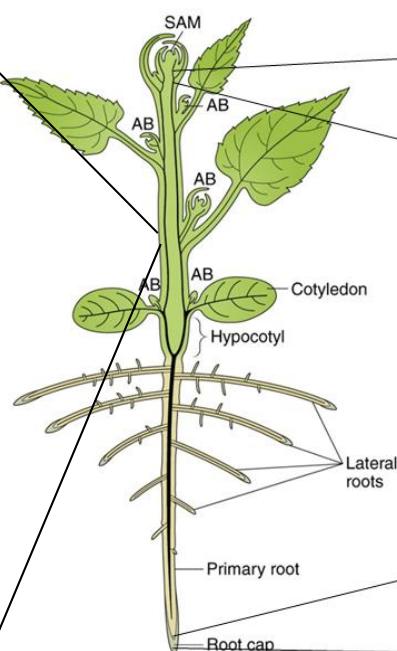

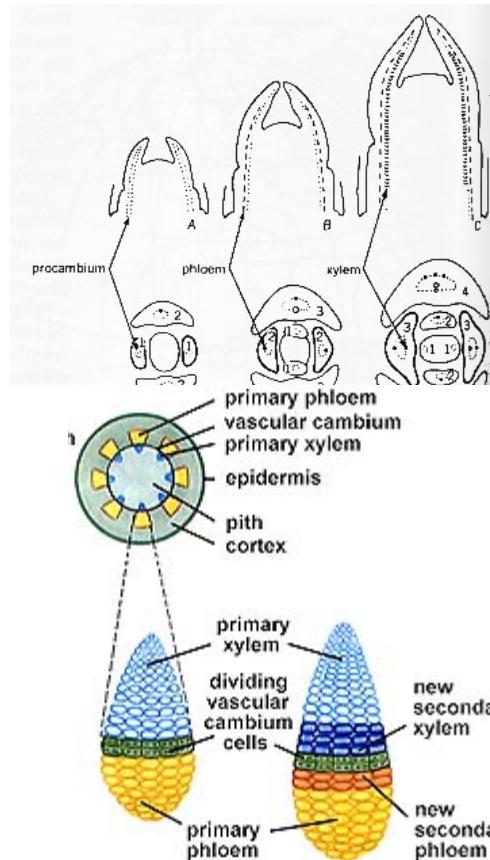

*Arabidopsis*

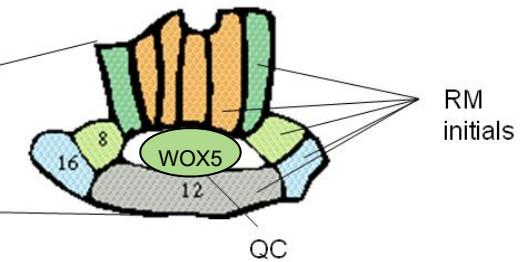

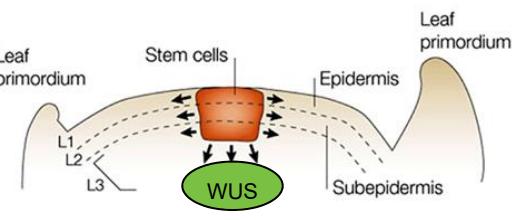

# Meristem Types

Plant Grow thanks to Meristems

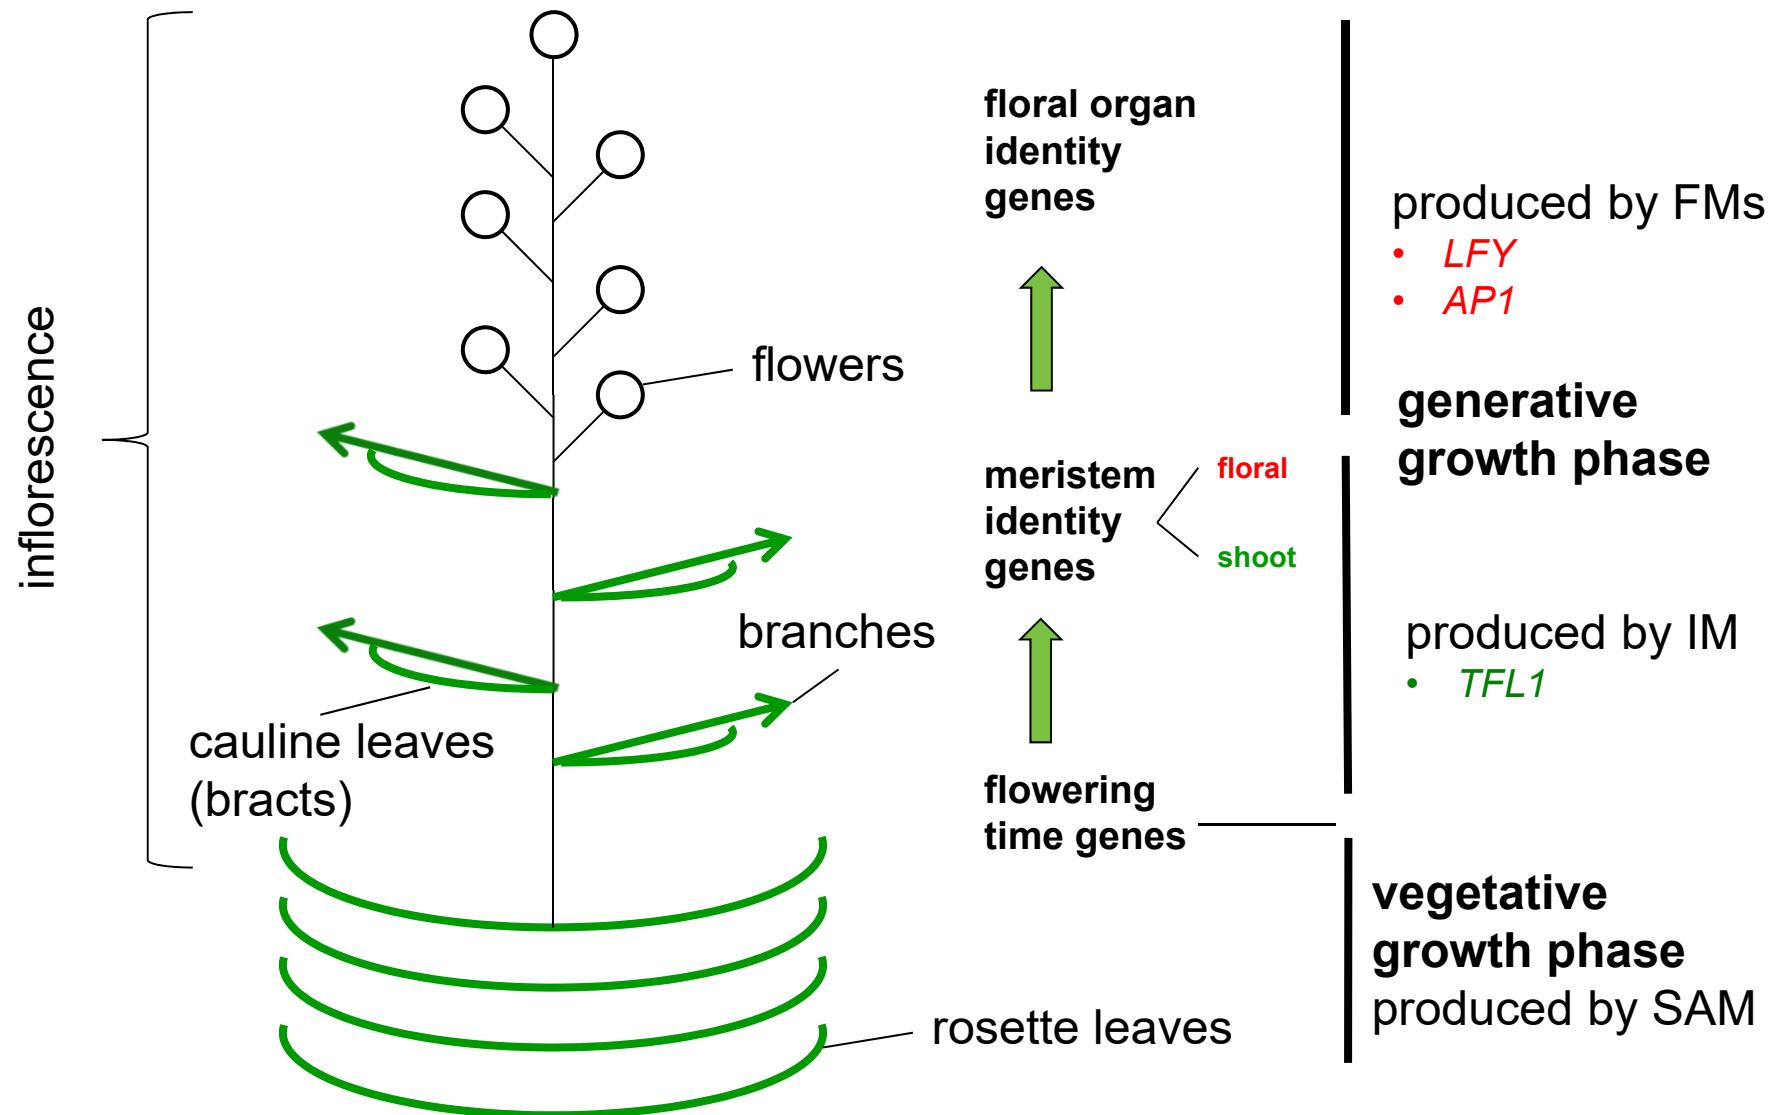

Lateral meristems

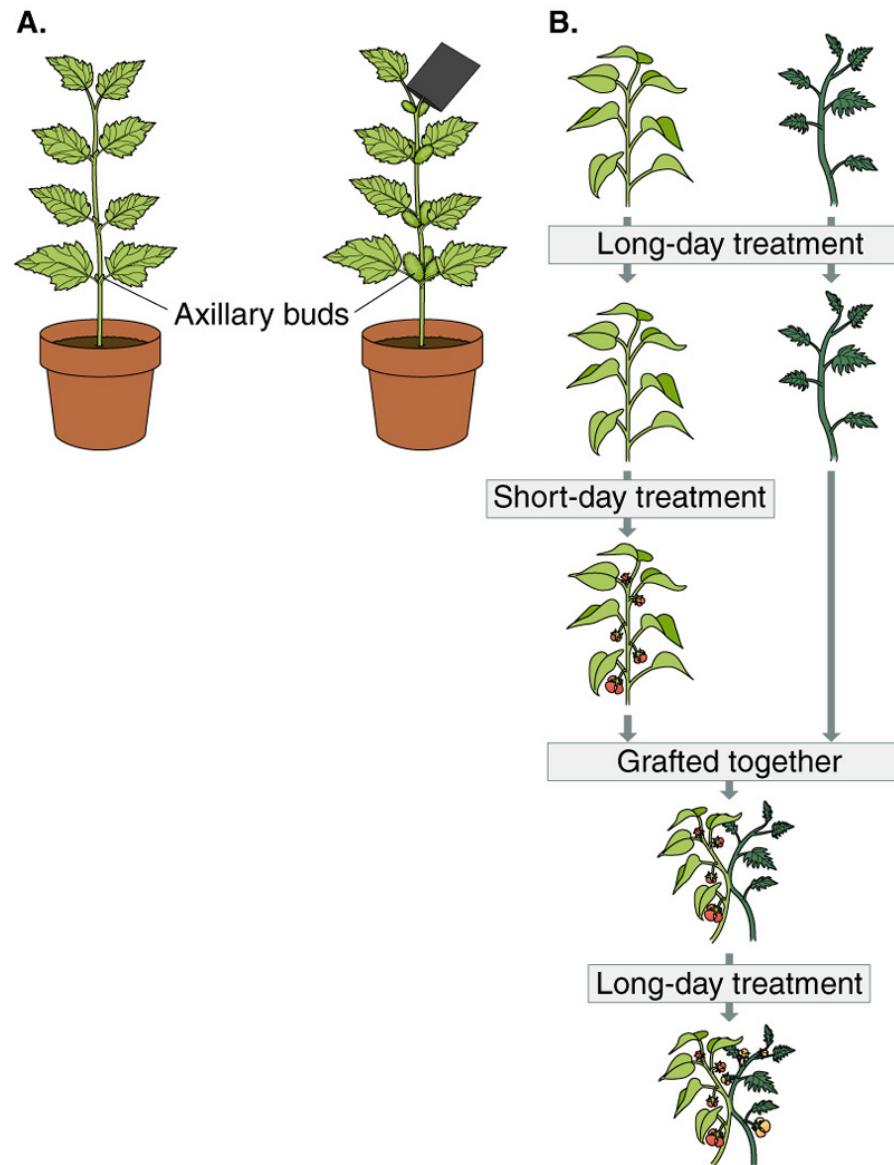

Apical meristems

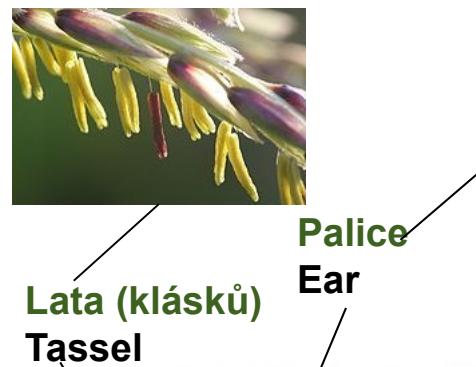

# Changes in Meristem Identity

# Initiation of Flowering

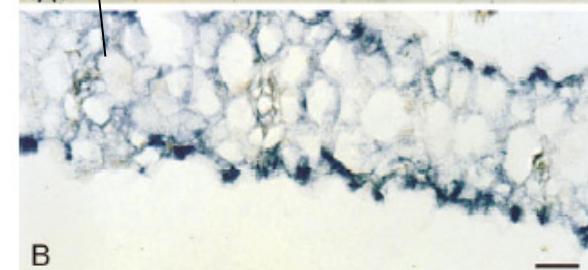

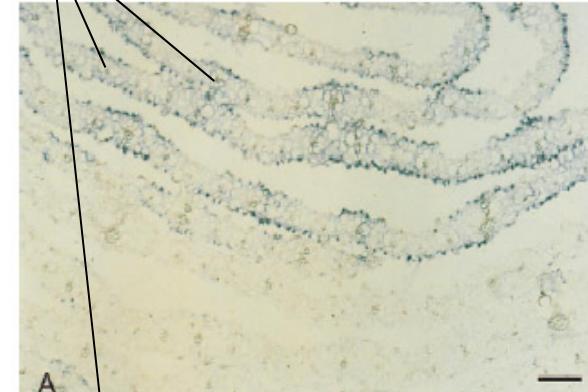

# Initiation of Flowering

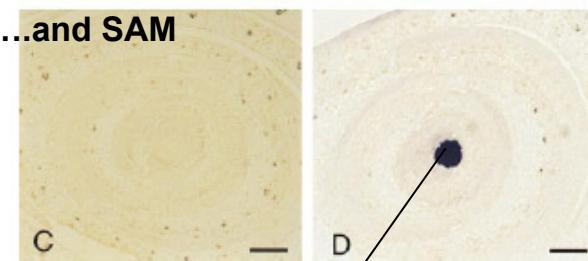

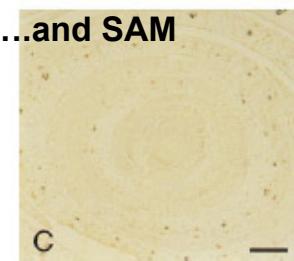

*In situ* hybridization with *INDETERMINATE (ID1)* mRNA...

....in leaves

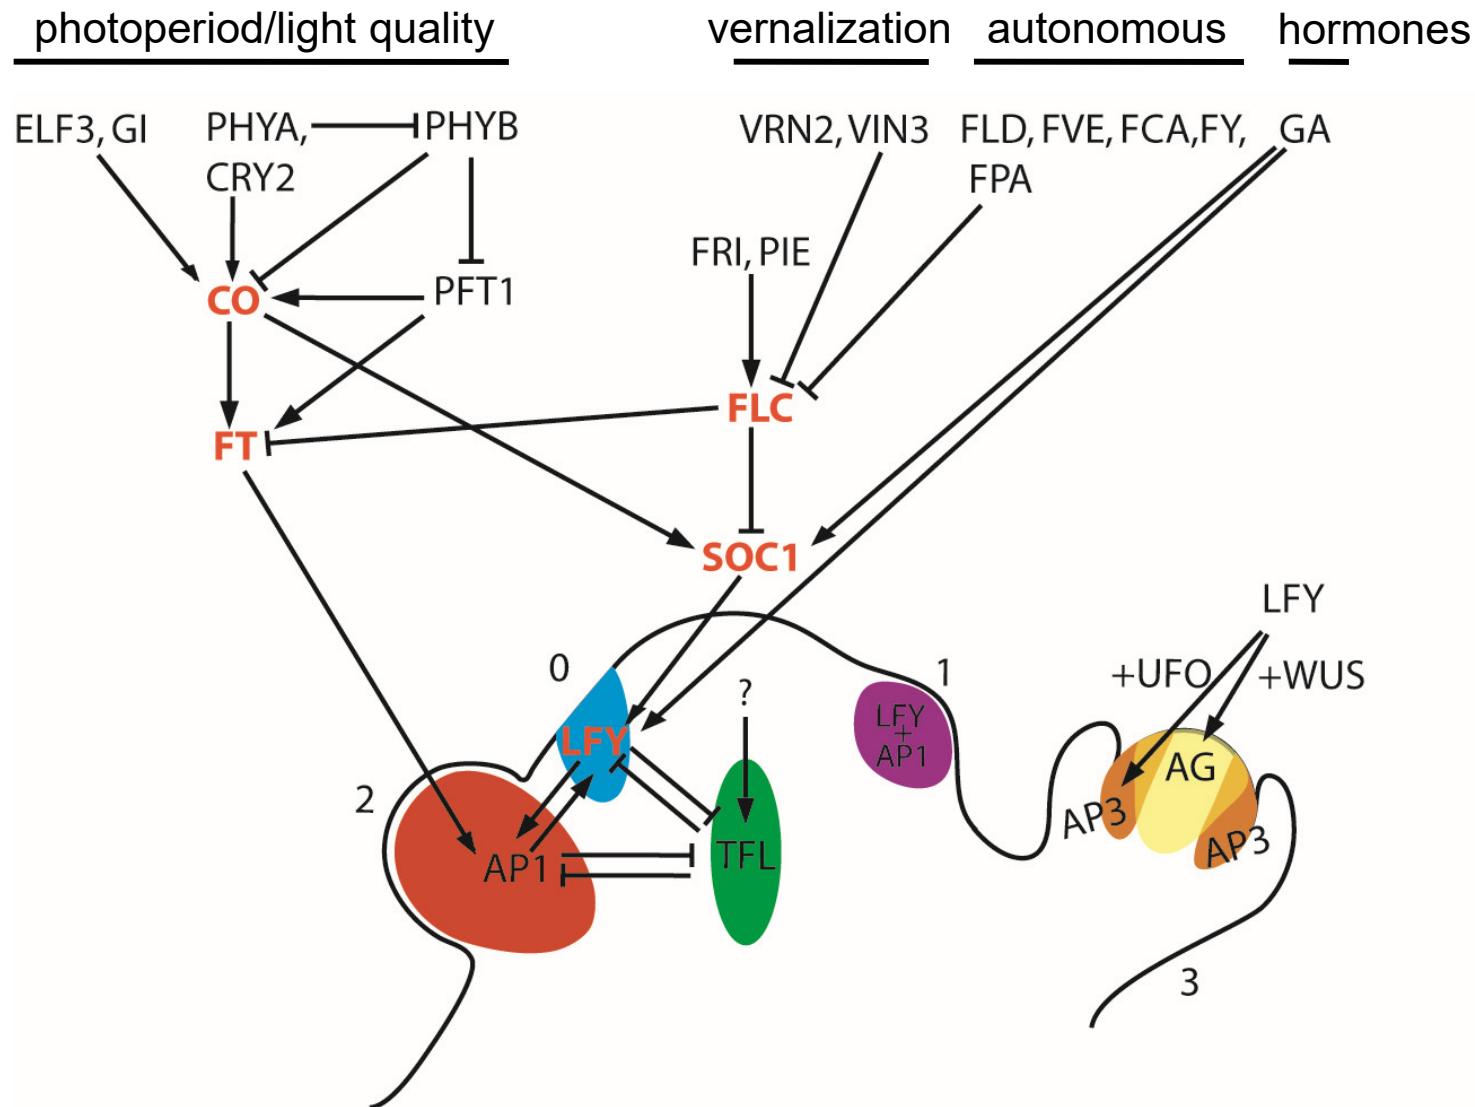

....and SAM

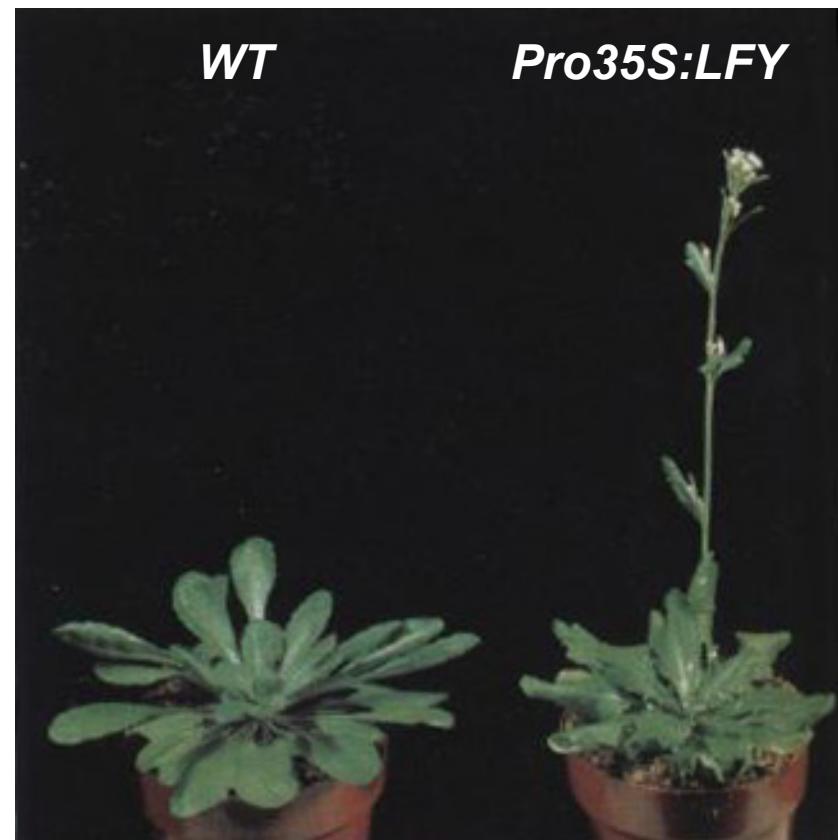

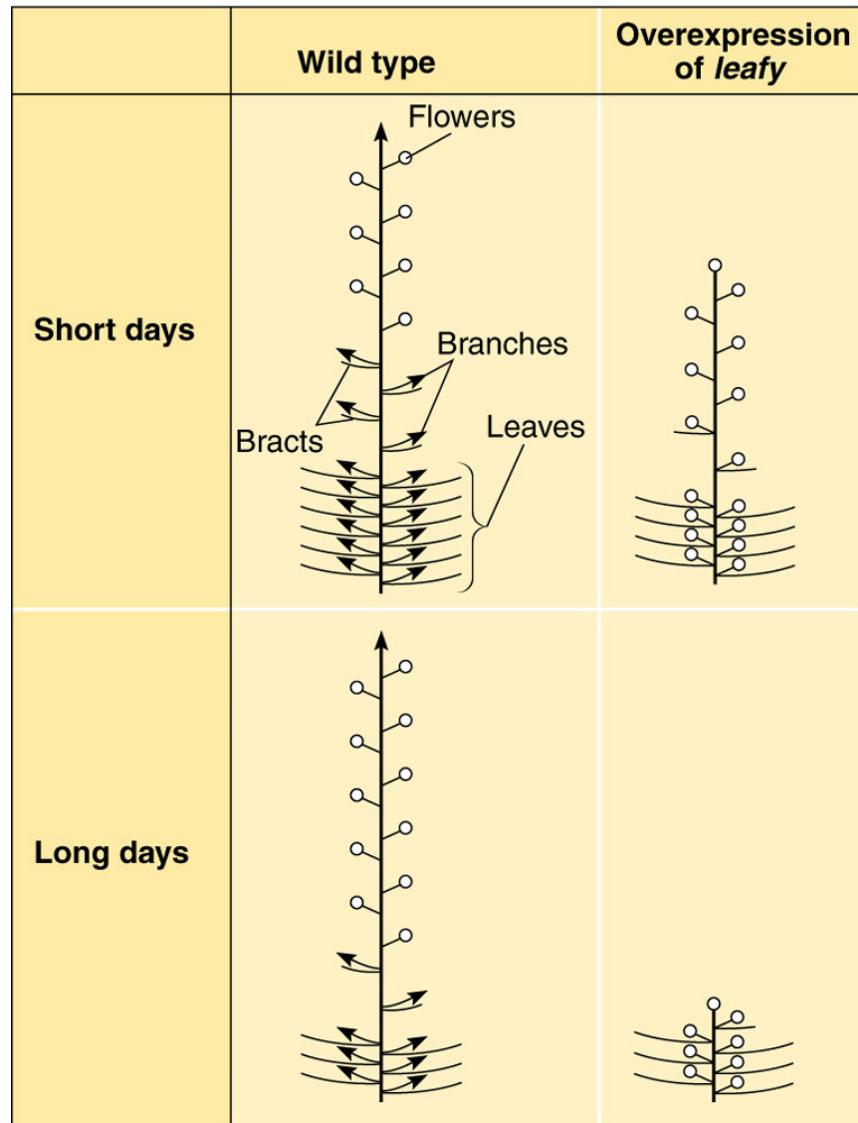

*KN1*

# Key Concepts

- In plants, **gametophytic** and **sporophytic portion** (“generation”) of the life cycle could be distinguished
- **Initiation of flowering** integrates **multiple inputs** (light quality/photoperiod, vernalization, autonomous and hormonal signals)
- **Several developmental switches** resulting into **acquisition of floral meristem** and **floral organ identity** take place during onset of flowering. These **switches** are under control of **specific genes** that mutually interact
- In angiosperms, the gametophyte is reduced to **three-celled pollen tube** (male gametophyte) and mostly **seven-celled female gametophyte** (embryo sac). **Auxin gradient** determines **acquisition of cell identity** during embryo sac development
- Pollen tube growth is complex process associated with large amount of cell material deposition. **Pollen tube guidance is mediated by specific molecules** allowing **synergid-cell mediated chemotaxis**.
- **Expression of maternal** and **paternal genes** is **tightly regulated** during seed development.

# Discussion
