# Prehistória: Watson a Crick 1953

# **A STRUCTURE FOR DEOXYRIBOSE NUCLEIC ACID**

**J.D.Watson**

**F.H.C.Crick**

**Nature, April 25, 1953**

„It has not escaped our notice that  
the specific pairing we have  
postulated immediately suggests  
a possible copying mechanism for  
the genetic material“

# Genetika človeka v r. 1953

- hodnotenie rodokmeňov
- štúdium dvojčiat
- cca 50 monogénných ochorení
- 5 monogénných znakov (ABO, Rh...)
- 48 chromozómov
- 5 miliónov génov
- žiadna DNA (podľa učebníc)

# 60-te roky: cytogenetika človeka

- 1956: 46 chromozómov
- 1959: chromozómové aberácie a choroby
- 1960: nomenklatúra a metodika
- chromozómy a nádory
- chromozómy: „orgán“ lekárskej genetiky
- ľudských génov jeden milión, o DNA stále ani zmienka...

# **70-te roky: žeby DNA?**

- **polymorfizmy (sérové skupiny, izoenzýmy...)**
- **väzba a chrom. lokalizácia**
- **bunkové hybridy**
- **biochemická genetika**

**Ale už aj:**

- **prvé RFLP v ľudskej DNA (1978)**
- **DNA diagnostika chorôb (1979)**
- **100 000 génov**

# Human Genome Project: história

- 1986: Santa Fe - DoE Intl. Meeting
- James Watson: „vystúpiť na cestu od dvojitej závitnice k 3 miliardám schodov ľudského genómu“
- 1988: Kongres USA schválil 15 ročný projekt a dotáciu 3 mld USD
  
- 1990: začiatok projektu
- 2005: predpokladané ukončenie

Koordinácia:

1988: HUGO (Human Genome Organization)

HUGO Europe – Americas - Pacific

# HGP: rozsah

- $3\,200 \times 10^6$  bp (dĺžka Dunaja v mm !)
- dovtedy najdlhší sekvenovaný úsek: ľudská mtDNA (16 500 bp, 1981)
- vtedajšia rýchlosť: 100 bp / osoba / deň
- cena: 5 - 10 USD/bp

Oficiálny začiatok HGP: 1990

- 20 pracovísk zo 6 štátov
- 3 mld USD
- cca 15 rokov práce (t.j. do r. 2005)

# História sekvenovania DNA

bp/osoba/rok	rok	udalost'
1	1965	<i>Holley</i> sekv. alanyl tRNA <i>S. cerev.</i>
15	1970	<i>Wu</i> sekvenoval 12 bp lambda fága
150	1977	<i>Sanger</i> dideoxy, <i>Gilbert</i> chem. sekv.
1 500	1978	<i>Sanger</i> sekv. phi-x174 (5375 bp)
15 000	1980	<i>Messing</i> vyvinul M13 vektor
25 000	1986	<i>Hood</i> – čiastočne automat. sekv.
1,000 000	1995	<i>Venter</i> – autom. fluoresc. sekv.
150, 000 000	1999	Perkin-Elmer 96 kapilárny sekv.
? 000, 000 000	2004	každý kto má vybavenie

# HGP: ciele

- Triangulovať genóm pomocou DNA markerov
- Identifikovať a mapovať gény, určiť ich štruktúru a funkciu v zdraví aj v patológii
- Identifikovať dôležité mimogénové sekvencie
- Určiť úplnú sekvenciu genómu (3,2 Gb)
- Všetky dáta uložiť vo verejne prístupných databázach
- Sekvenovať genómy modelových organizmov (drozofila, myš, *C. elegans*, *A. thaliana* a i.)
- Skúmať etické, legálne a sociálne aspekty

# Metódy mapovania

## ***Genetické mapovanie***

- rodokmeňová analýza (rekombinácia)
- triangulácia pomocou markerov

## ***Fyzické mapovanie***

### **- nízke rozlíšenie:**

- hybridizácia somat. buniek
- in situ hybridizácia (FISH)

### **vysoké rozlíšenie:**

restrikčné mapovanie

STS mapovanie

EST mapovanie

sekvenovanie

# Triangulácia ľudského genómu

## Genetické markery: história

1900	krvné skupiny	cca 20
1960	sérové proteíny a izoenzýmy	$10^2$
1980	DNA RFLP	$10^3$
1985	minisatelity	$10^4$
1990	mikrosatelity	$10^5$
1995	SNP (single nt polymorphisms)	$10^6$

## **Snímek 12**

---

**d11**

dekanat1; 3.2.2002

# Triangulácia genómu: genetické mapy

1987	RFLP	402	nad 10 cM
1992	STR	813	cca 5 cM
1996	STR	5262	1,6 cM
1997	integrovaná	6800	0,7 cM

podrobnejšia triangulácia nie je potrebná  
(v súčasnosti cca  $2 \times 10^6$  mapovaných SNP)

# International Human Genome Sequencing Consortium

## Hierarchická metóda (clone-by-clone):

- Triangulácia genómu pomocou STR markerov

- 100 až 200 kb dlhé BAC klony, mapovanie týchto klonov do STR mapy

- Zostrojiť kontigy

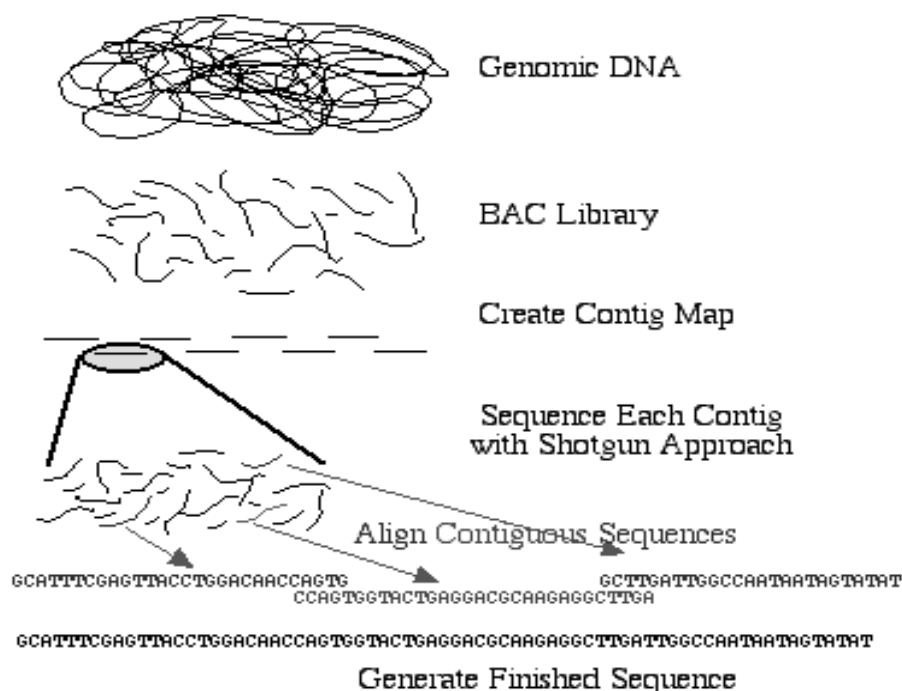

- Štiepiť BACy na náhodné („shotgun“) fragmenty

- Sekvenovať fragmenty

- Zoradiť do sekvencie

# HGP: hierarchická stratégia sekvenovania („clone-by-clone“)

## Hierarchical Shotgun Sequencing Method

- triangulovať genóm pomocou STR
- zostrojiť BAC-knižnice
- mapovať klony do STR mapy
- utvoriť BAC kontigy
- štiepiť BAC-y náhodne na sekvenovateľné fragmenty
- sekvenovať fragmenty
- zoradiť do konečnej sekvencie klonu
- zoradiť sekvencie klonov do definitívnej sekvencie
- anotovať sekvenciu

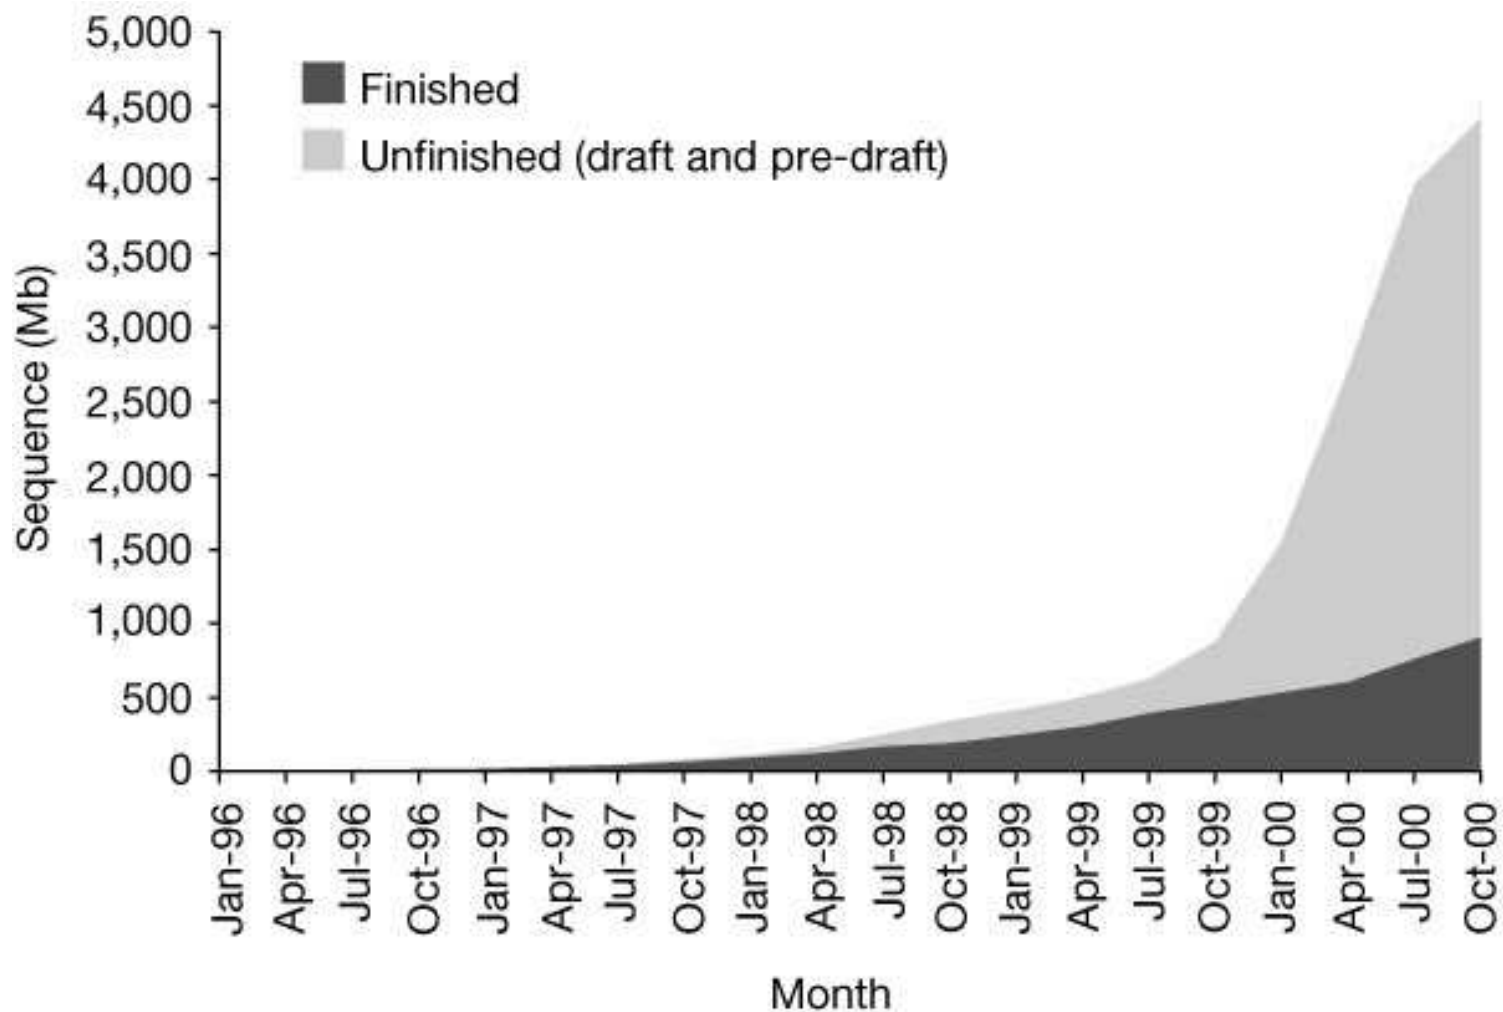

# HGP: Francis Collins a Eric Lander

# Nárast údajov o sekvencii 1996-2001

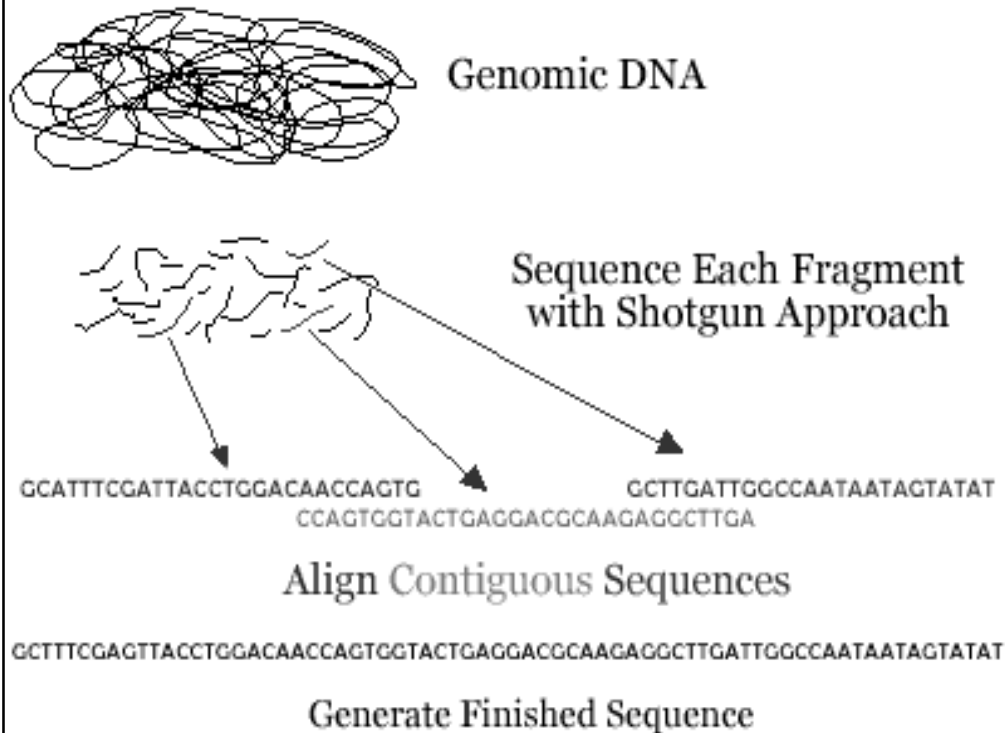

# Craig J. Venter a Celera Genomics

# Stratégia sekvenovania: Celera Genomics

## Whole Genome Shotgun Sequencing Method

- Celogenómová shotgun stratégia sekvenovania
- Skombinovanie s dátami HGP
- Utvorenie knižníc s definovanými dĺžkami (2,10,50 kb)

15 February 2001

# Initial sequencing and analysis of the human genome

**International Human Genome Sequencing Consortium\***

*\* A partial list of authors appears on the opposite page. Affiliations are listed at the end of the paper.*

---

The human genome holds an extraordinary trove of information about human development, physiology, medicine and evolution. Here we report the results of an international collaboration to produce and make freely available a draft sequence of the human genome. We also present an initial analysis of the data, describing some of the insights that can be gleaned from the sequence.

# Finishing the euchromatic sequence of the human genome

INTERNATIONAL HUMAN GENOME SEQUENCING CONSORTIUM

[http://vega.sanger.ac.uk/Homo\\_sapiens/](http://vega.sanger.ac.uk/Homo_sapiens/)  
[www.ensembl.org](http://www.ensembl.org)

# Dokončená sekvencia (2004): základné údaje

- pokrýva 2,85 Gb; celý genóm má 3,08 Gb
- pokrýva > 99% euchromat. genómu
- sekvenačné chyby zriedkavejšie ako 1 : 100 000, priemerné pokrytie 11-násobné
- len <350 medzier (väčšinou heterochrom. úseky a vysoko repetitívne sekvencie)
- 20 000 – 25 000 proteíny kódujúcich génov (22 287)
- priemerne 9 génov na Mb; veľká variabilita
- 232 000 exónov; v priemere 10,4 exónu na gén; exóny tvoria len 1,2% dĺžky sekvencie
- identifikovaných cca 20 000 pseudogénov, asi ich je viac ako génov
- segmentové duplikácie tvoria 5,3% euchromatickej sekvencie („evolutionary gene nurseries“)
- ale pozor: anotácia sekvencie stále ešte nie je dokončená!

# Obsah GC párov v ľudskom genóme: 20 Mb okná

# Zastúpenie rozličných typov rozptýlených repetícií

Classes of interspersed repeat in the human genome

			Length	Copy number	Fraction of genome
LINEs	Autonomous		6–8 kb	850,000	21%
	Non-autonomous		100–300 bp		
Retrovirus-like elements	Autonomous		6–11 kb	450,000	8%
	Non-autonomous		1.5–3 kb		
DNA transposon fossils	Autonomous		2–3 kb	300,000	3%
	Non-autonomous		80–3,000 bp
