

- Dobry den,

posílám výsledky MALDI MS analýz spáchaných během letošních cvičení. V dendrogramech se k sobě kvůli absenci rodově specifických signálů neřadí pouze zástupci rodů Bacillus a Streptococcus.

Během přesunů lidí a vzorků došlo k politováníhodné události, kdy byl kmen 7444 extrahován a analyzován v úterý, poté omylem zařazen mezi neanalyzované a opětovně extrahován a analyzován ve čtvrtek, kdy se z něj proto nepodařilo získat kvalitní spektra (obětí omylu byla Mely, které se tímto dodatečně omlouvám).

Zdravi Ondrej Sedo

Streptococcus oralis CCM 7412^T

Streptococcus intermedius CCM 4044

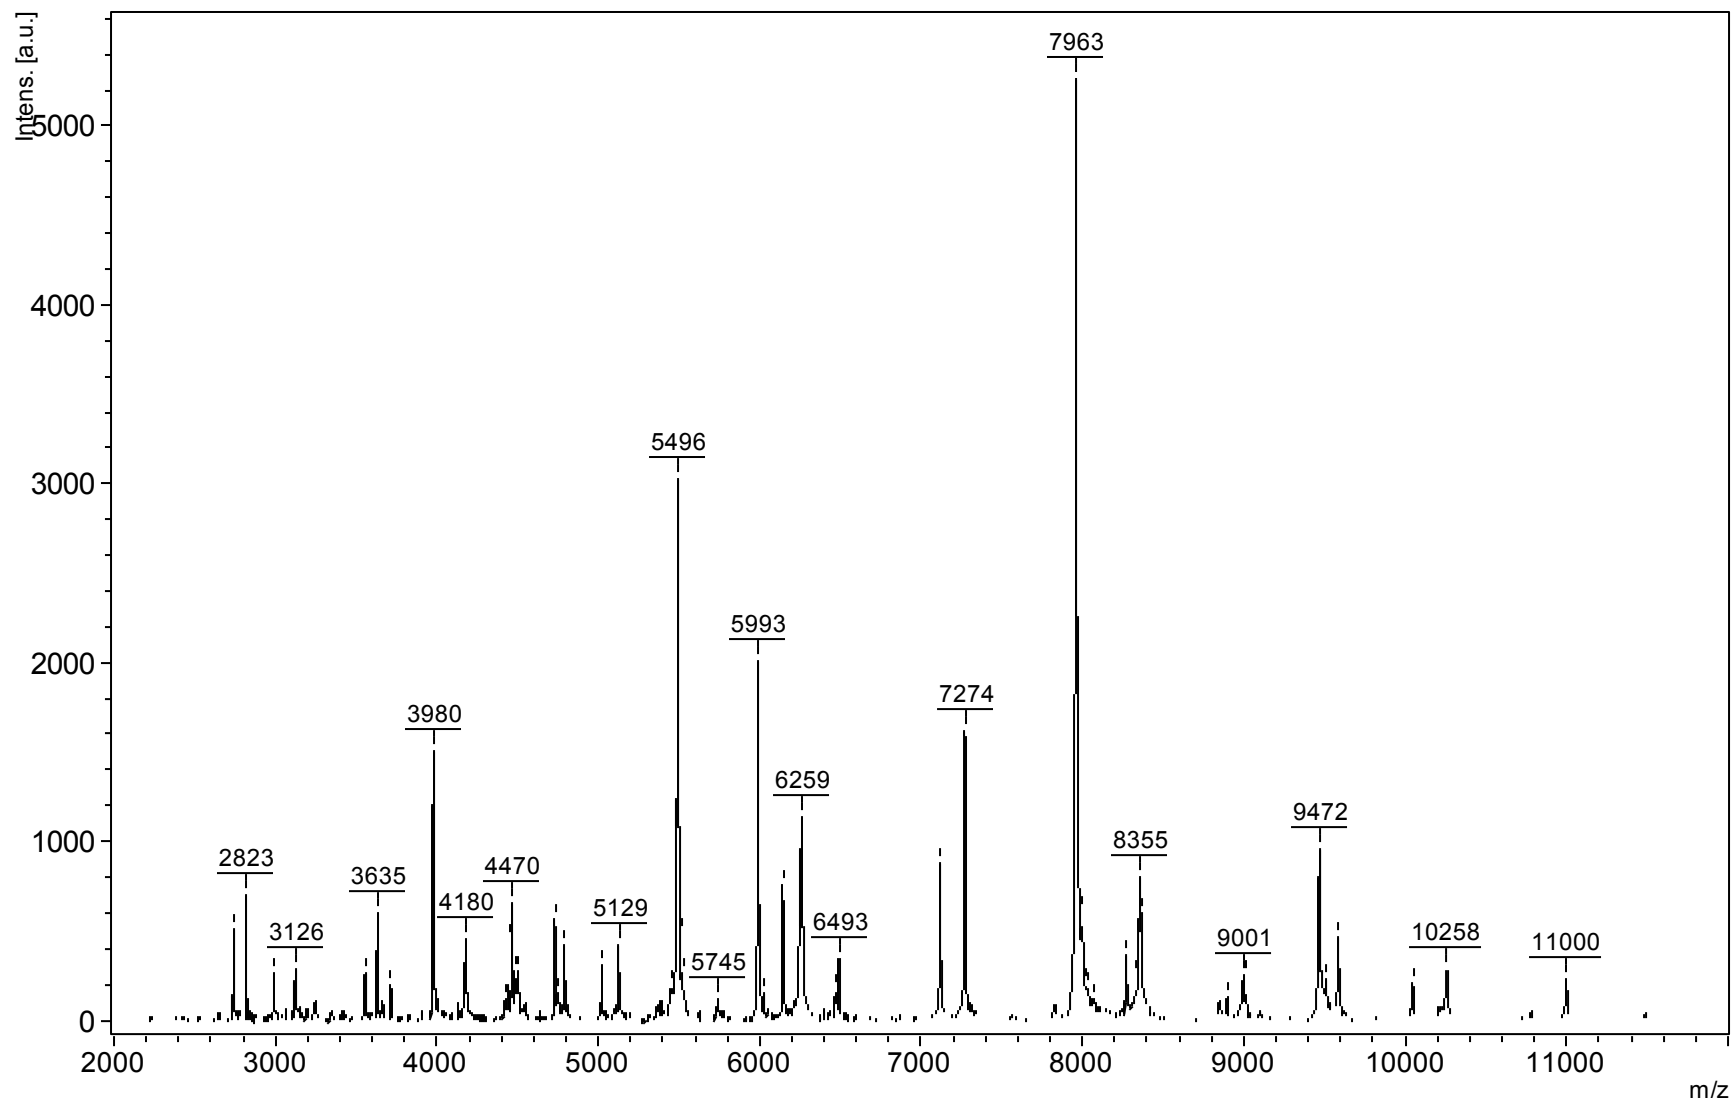

Streptococcus intermedius CCM 7444^T

Proteus mirabilis CCM 1944

Proteus mirabilis CCM 7188^T

Brevundimonas vesicularis 3398^T

Brevundimonas diminuta 2657^T

Brevundimonas diminuta 4623

Pseudomonas mediterranea CCM 7691^T

Pseudomonas koreensis CCM 7352^T

Staphylococcus epidermidis 4418

Staphylococcus aureus subsp. *aureus* 1484

Staphylococcus aureus subsp. *aureus* 2022

Bacillus megaterium CCM 2007^T

Bacillus circulans CCM 1611

Bacillus circulans CCM 2048^T

Serratia marcescens subsp. *marcescens* 303^T

Serratia marcescens subsp. *marcescens* 635

Corynebacterium glutamicum 2428^T

Dendrogram 2009

Dendrogram 2008 + 2009
