

SPACE FOOD – KEY

Rehydratable food package – food packages helping restore moisture or fluid

Shelf life – until when you can eat something

Food packaging disposal – can be either by materials (paper and paperboards, glass, metals, plastics, rubber and leather, textiles, wood, food scraps) or by major product categories: *containers and packaging* (mainly waste from food packaging, such as soft drink cans, milk cartons, and cardboard boxes); *nondurable goods* (newspapers, magazines, books, office paper, tissues, and paper plates and cups); *durable goods* (household appliances, furniture and furnishings, carpets and rugs, rubber tires, batteries, and electronics)

Video

1. Conducting research on an adequate food system on Mars missions
2. There are a lot of things to determine after the food system is in place: vehicle, galley, etc.
3. It is far away, it takes long to get there and back
4. Vegetarian cookbook, their own recipes
5. No cheese (no fresh milk on Mars), vegetables from a greenhouse
