- Literature sources for Chapter 05:

- Surpin, M. and Raikhel, N. (2004) Traffic jams affect plant development and signal transduction. *Nature Reviews/Molecular Cell Biology* 5, 100-109
- Zouhar, J., Hicks, G.R. and Raikhel, N.V. (2004) Sorting inhibitors (Sortins): Chemical compounds to study vacuolar sorting in *Arabidopsis*. *Proceedings of the National Academy of Sciences of the U.S.A.*, 101, 9497–9501
- Nevo-Dinur, K., Nussbaum-Shochat, A., Ben-Yehuda, S., and Amster-Choder, O. (2011). Translation-independent localization of mRNA in *E. coli*. *Science* 331, 1081-1084.
- Lecuyer, E., Yoshida, H., Parthasarathy, N., Alm, C., Babak, T., Cerovina, T., Hughes, T.R., Tomancak, P., and Krause, H.M. (2007). Global analysis of mRNA localization reveals a prominent role in organizing cellular architecture and function. *Cell* 131, 174-187.
- Schonberger, J., Hammes, U.Z., and Dresselhaus, T. (2012). In vivo visualization of RNA in plants cells using the lambdaN(22) system and a GATEWAY-compatible vector series for candidate RNAs. *The Plant journal : for cell and molecular biology* 71, 173-181.

Outline

- Methods of gene expression analysis
 - Qualitative analysis of gene expression
 - Preparation of transcriptional fusion of promoter of analysed gene with a reporter gene
 - Preparation of translational fusion of the coding region of the analysed gene with reporter gene
 - Use of the data available in public databases
 - Tissue- and cell-specific gene expression analysis
 - Quantitative analysis of gene expression
 - DNA and protein chips
 - Next generation transcriptional profiling
- Regulation of gene expression in the identification of gene function by gain-of-function approaches
 - T-DNA activation mutagenesis
 - Ectopic expression and regulated gene expression systems
- Chemical Genetics

Outline

- Methods of gene expression analysis
 - Qualitative analysis of gene expression
 - Preparation of transcriptional fusion of promoter of analysed gene with a reporter gene

Transcriptional Fusion

- Identification and cloning of the promoter region of the gene
- Preparation of recombinant DNA carrying the promoter and the reporter gene (uidA, GFP)

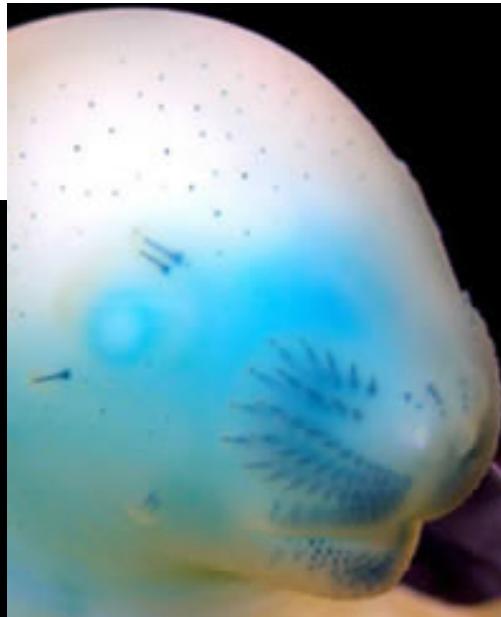

Transcriptional Fusion

- Identification and cloning of the **promoter region** of the gene
- Preparation of **recombinant DNA** carrying the promoter and the **reporter gene** (*uidA*, GFP)
- Preparation of **transgenic organisms** carrying this recombinant DNA and their **histological analysis**

GUS Reporter in Mouse Embryos

Outline

- Methods of gene expression analysis
 - Qualitative analysis of gene expression
 - Preparation of transcriptional fusion of promoter of analysed gene with a reporter gene
 - Preparation of translational fusion of the coding region of the analysed gene with reporter gene

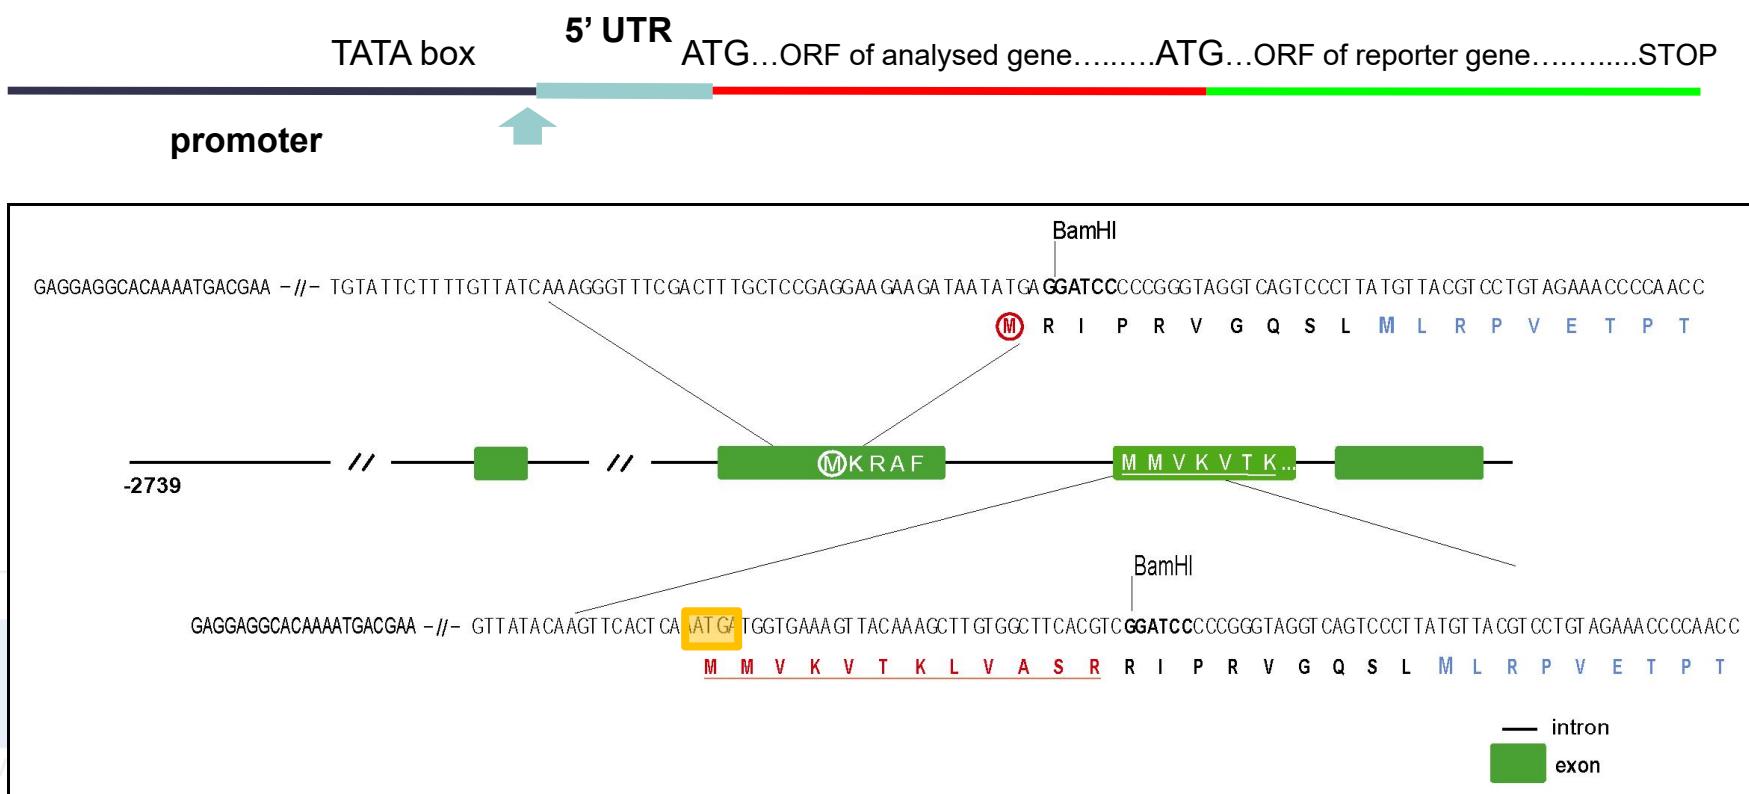

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

Tato prezentace je spolufinancována

Translational Fusion

- Identification and cloning of the promoter and coding region of the analyzed gene
- Preparation of a recombinant DNA carrying the promoter and the coding sequence of the studied gene in a fusion with the reporter gene (uidA, GFP)

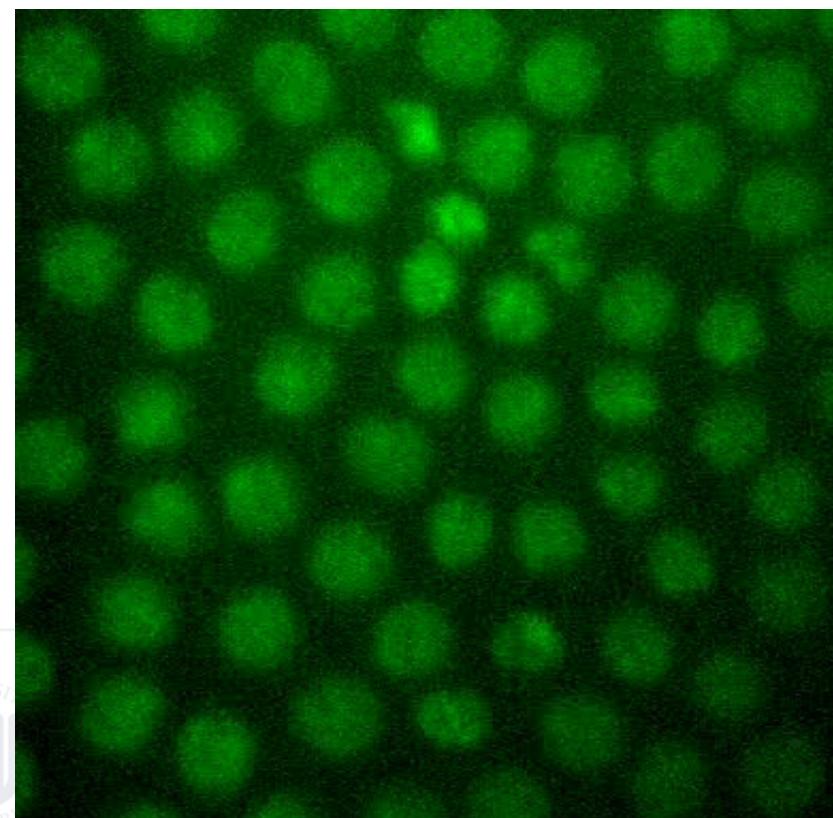

Translational Fusion

- Preparation of transgenic organisms carrying the recombinant DNA and their histological analysis
- Compared to transcriptional fusion, translation fusion allows analysis of intercellular localization of gene product (protein) or its dynamics

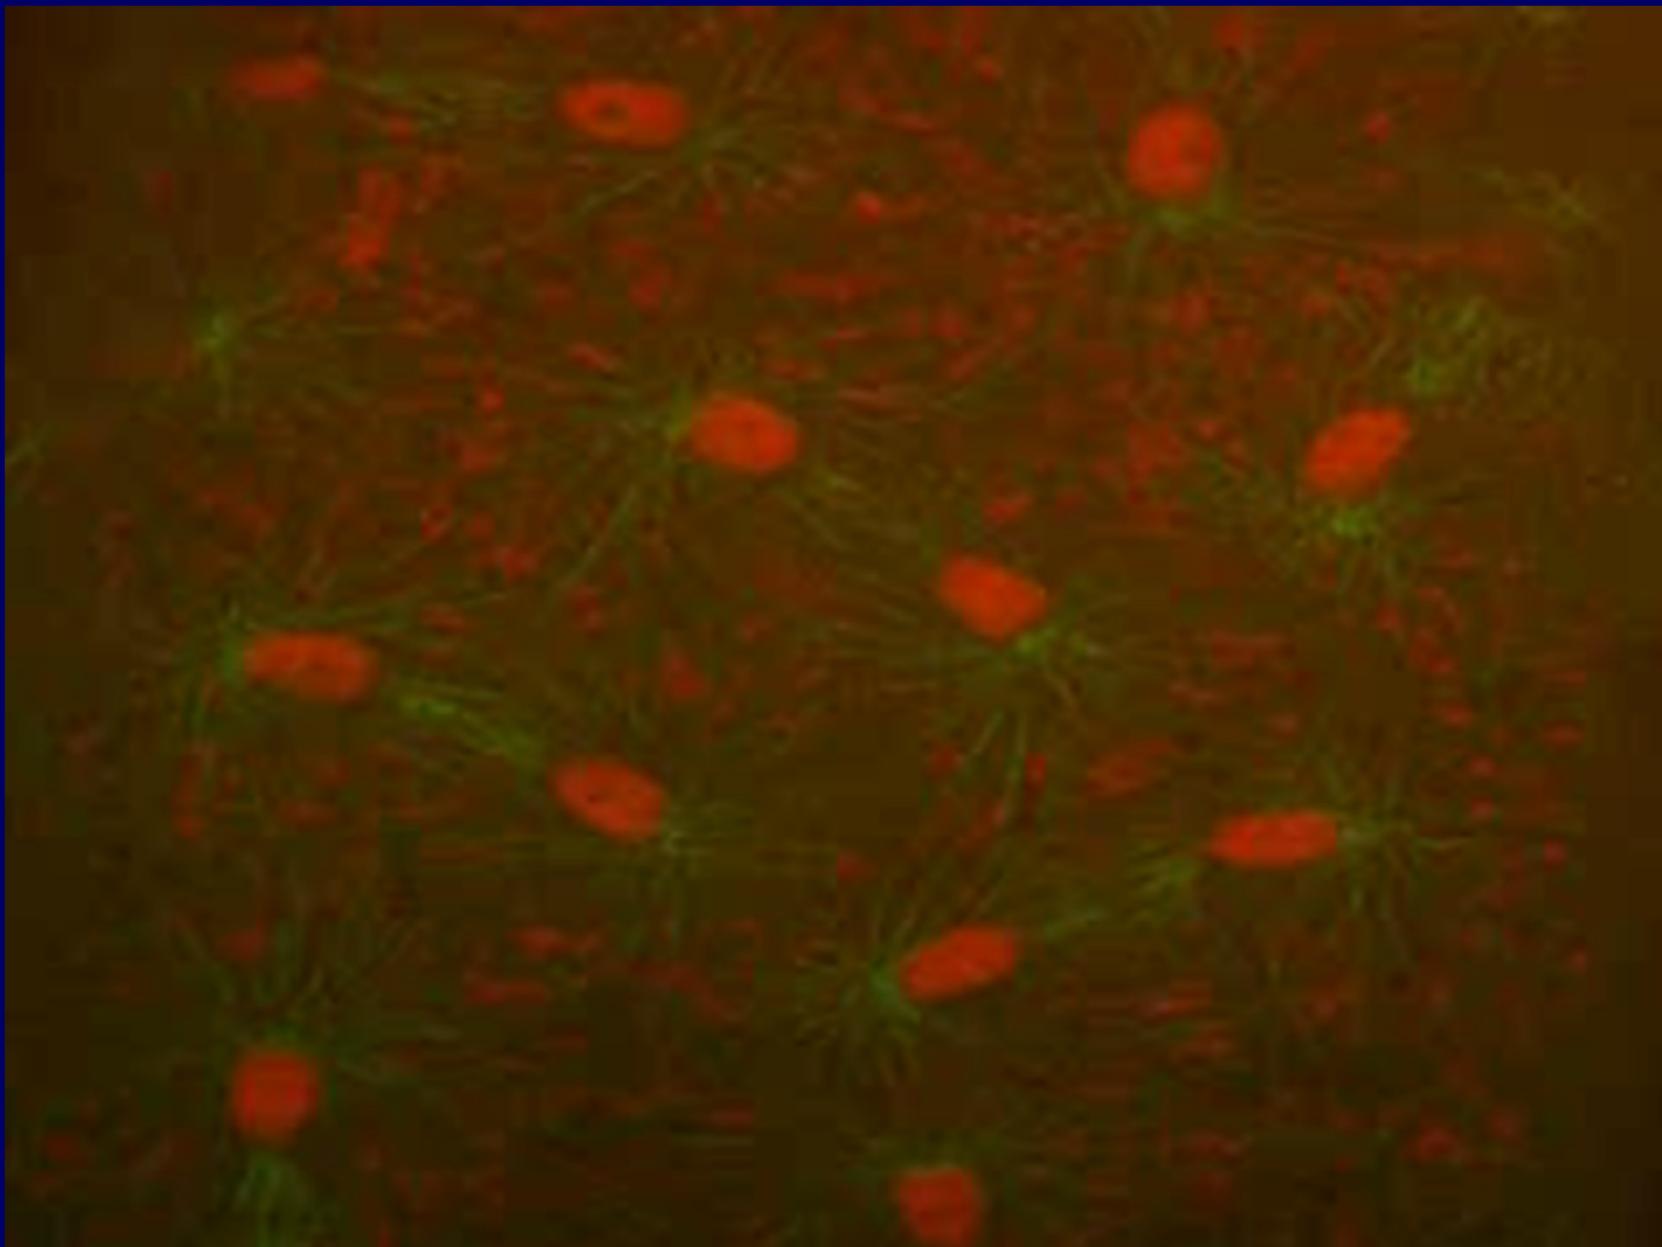

PIN1-GFP in *Arabidopsis*

Histone 2A-GFP in *Drosophila* embryo by PAM

Translational Fusion

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

Tato prezentace je spolufinancována
Evropským sociálním fondem
a státním rozpočtem České republiky

Outline

- Methods of gene expression analysis
 - Qualitative analysis of gene expression
 - Preparation of transcriptional fusion of promoter of analysed gene with a reporter gene
 - Preparation of translational fusion of the coding region of the analysed gene with reporter gene
 - Use of the data available in public databases
 - Tissue- and cell-specific gene expression analysis
 - Quantitative analysis of gene expression
 - DNA and protein chips

DNA Chips

- Method, which provides quick comparison of a large number of genes/proteins between the test sample and control
- Oligo DNA chips are used the most

- There are commercialy available kits for the whole genome
 - company Operon (Qiagen), 29.110 of 70-mer oligonucleotides representing 26.173 genes coding proteins, 28.964 transcripts and 87 microRNA genes of *Arabidopsis thaliana*
 - Possibility of use for the preparation of photolithography chips – facilitation of oligonucleotide synthesis e.g. for the whole human genome (about 3,1 x 10⁹ bp) jit is possible to prepare 25-mers in only 100 steps, by this technique
- Chips not only for the analysis of gene expression, but also for e.g. Genotyping (SNPs, sequencing with chips, ...)

Affymetrix ATH1 *Arabidopsis* genome array

Critical Specifications	
Number of arrays	One
Number of sequence represented	>24,000 gene sequences
Feature size	18 µm
Oligonucleotide probe length	25-mer
Probe pairs/sequence	11
Control sequences	<i>E. coli</i> genes <i>bioB</i> , <i>bioC</i> , <i>bioD</i> . <i>B. subtilis</i> gene <i>lysA</i> . Phage P1 <i>cre</i> gene. <i>Arabidopsis</i> maintenance genes GAPDH, Ubiquitin, and Actin
Detection sensitivity	1:100,000*

*As measured by detection in comparative analysis between a complex target containing spiked control transcriptions and a complex target with no spikes.

DNA Chips

- For the **correct interpretation** of the results, good knowledge of **advanced statistical methods** is required
- It is necessary to include a **sufficient number of controls** and **repeats**
- Control of accuracy of the measurement (repeated measurements on several chips with the same sample, comparing the same samples analysed on different chips with each other)
- Control of reproducibility of measurements (repeated measurements with different samples isolated under the same conditions on the same chip – comparing with each other)
- Identification of reliable measurement threshold
- Finally comparing the experiment with the control or comparing different conditions with each other -> the result

The screenshot shows the TAIR website interface. At the top, there's a search bar with 'Gene' and a 'Search' button. Below the header, there are tabs for 'Home', 'About TAIR', 'Sitemap', 'Contact', 'Help', 'Order', and 'Login'. The main content area has a title 'Experiment: Aluminum Stress'. Below it, there are tabs for 'Experiment Summary', 'Samples', 'Slides & Datasets', 'Array Design', and 'View All'. The 'Samples' tab is currently selected. A red oval highlights this tab and the first two rows of the table below. The table has columns for 'Slide (name : description)', 'External ID', 'Replicate (id : name)', 'Replicate type', 'Reverse replicate', 'Sample', 'Experimental variables', 'Label', and 'Get Data'. The first row corresponds to 'HoekengaS7 [*]: Aluminum Stress 1 [strong spatial bias]' with External ID 'AFGC: 7304', Replicate '63: Aluminum Stress', Type 'technical', Reverse replicate '63', Sample '7304_Cy3.7305_Cy5', Variables 'no treatment (pool of 3, 8, and 24 hours)', Label 'Cy3', and a 'Download' button. The second row corresponds to 'HoekengaS7 [*]: Aluminum Stress 2 [strong spatial bias]' with External ID 'AFGC: 7305', Replicate '64: Aluminum Stress', Type 'technical', Reverse replicate '63', Sample '7304_Cy5.7305_Cy3', Variables 'Aluminum (50 5M AlCl3, pool of 3, 8, and 24 hours)', Label 'Cy5', and a 'Download' button.

Slide (name : description)	External ID	Replicate (id : name)	Replicate type	Reverse replicate	Sample	Experimental variables	Label	Get Data
HoekengaS7 [*]: Aluminum Stress 1 [strong spatial bias]	AFGC: 7304	63: Aluminum Stress	technical		7304_Cy3.7305_Cy5	no treatment (pool of 3, 8, and 24 hours)	Cy3	<button>Download</button>
HoekengaS7 [*]: Aluminum Stress 2 [strong spatial bias]	AFGC: 7305	64: Aluminum Stress	technical	63	7304_Cy5.7305_Cy3	Aluminum (50 5M AlCl3, pool of 3, 8, and 24 hours)	Cy5	<button>Download</button>

- Currently there's been a great number of results of various experiments in publicly accessible databases

Protein Chips

- Protein chips

- Chips with **high density** containing 10^4 proteins
- Analysis of **protein-protein interactions**, kinase substrates and **interactions with small molecules**
- Possibility of using **antibodies** – more **stable** than proteins

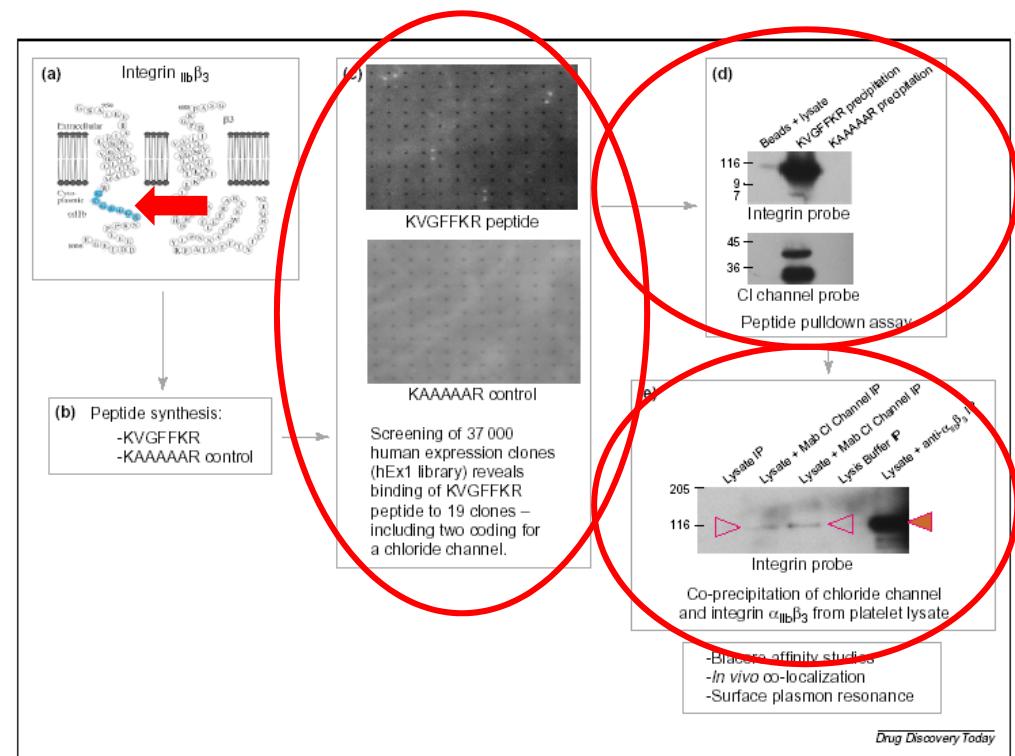

INVESTICE DO ROZVOJE Vzdělávání

Tato prezentace je spolufinancována
Evropským sociálním fondem

Protein Chips

- Identification of proteins interacting with integrin $\alpha_{IIb}\beta_3$ cytoplasmic domain of platelets

- Expression of cytoplasmic part as a fusion peptide biotin-KVGFFKR
- Analysis of binding to the protein chip containing 37.000 clones of *E. coli* expressing human recombinant proteins
- Confirmation of interaction by pull-down analysis of peptides and by coprecipitation of whole proteins as well (e.g. chloride channel Icln)
- Other use: e.g. in the identification of kinase substrates, when substrates are bound to the chip and exposed to kinases in the presence of radiolabeled ATP (786 purified proteins of which 21 were identified as CK2 α kinase substrates; Kramer et al., 2004)

Lueking et al., 2005

 - T-DNA activation mutagenesis

Gain-of-Function Approaches

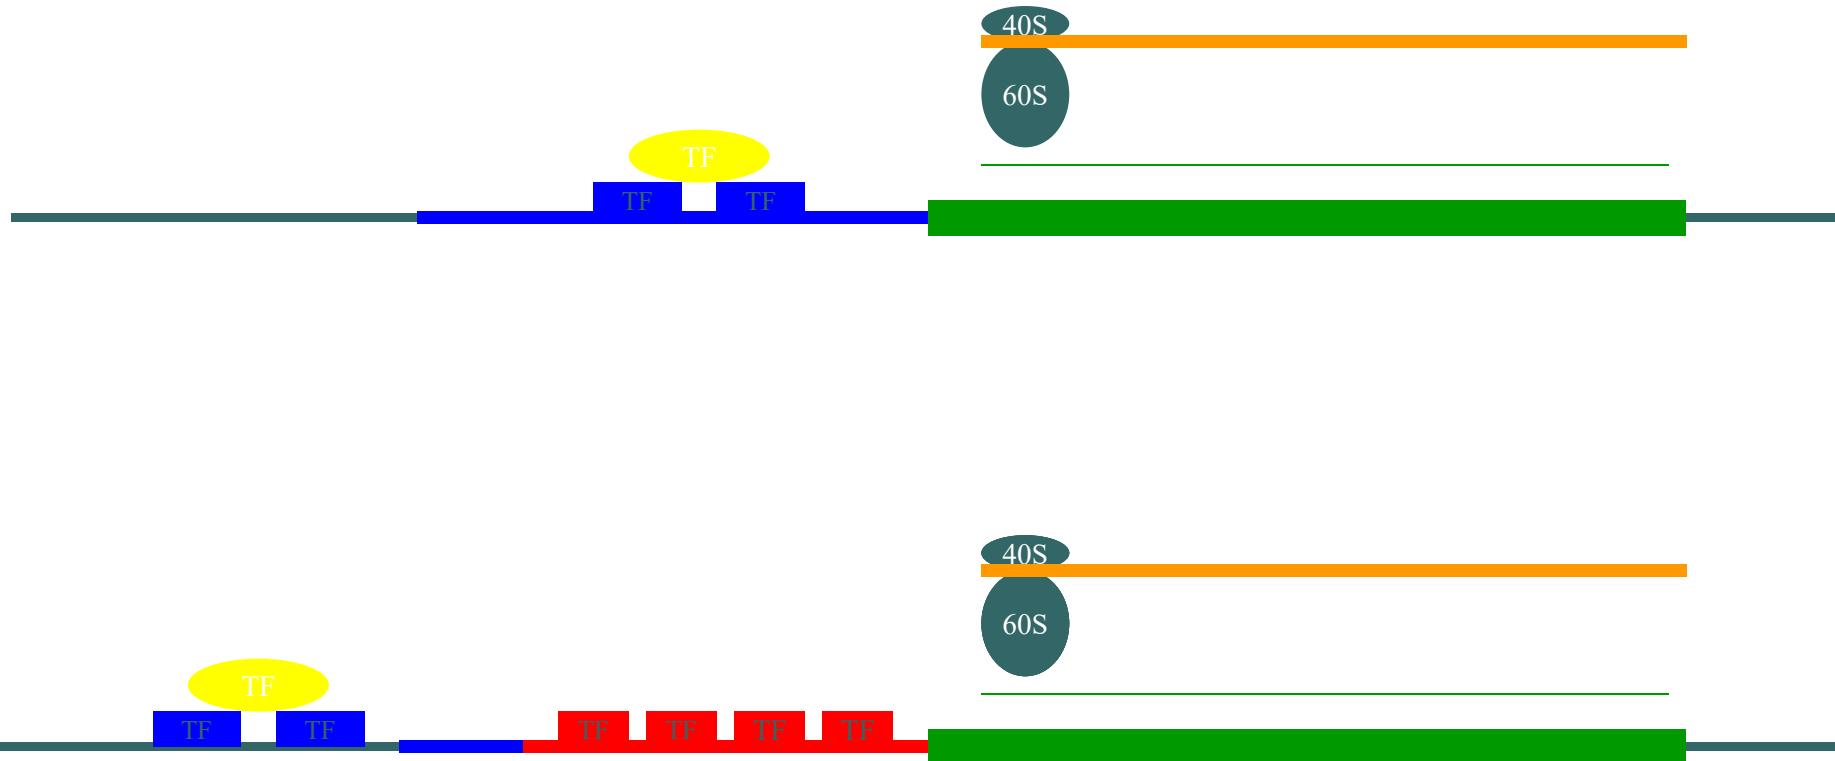

- Methods for identification of gene function using gain-of-function approaches
 - T-DNA activation mutagenesis
 - Method enabling isolation of dominant mutants by random insertion of constitutive promoter, resulting in overexpression of the gene and therefore in corresponding phenotypic changes
 - First step: preparation of mutant library prepared by transformation of a strong constitutive promoter or enhancer
 - Next step: search of interesting phenotypes
 - Identification of the affected gene, e.g. by plasmid-rescue

Chemical Genetics

■ New trends

- „chemical genetics“ – more than **50.000/120.417** records in PubMed database (16.10. **2008**/15.11. **2018**, an increase of **>240 %**)

The screenshot shows the PubMed search results for the query "chemical genetics". The search bar at the top contains the term "chemical genetics". The results are sorted by "Most Recent". The main panel displays a list of articles, with the first few listed below:

1. Rokhas MK, Rön JL, Wiklund C, Emmer A. *Anal Biochem*. 2018 Nov 10; pii: S0003-2697(18)31129-1. doi: 10.1016/j.ab.2018.11.002. [Epub ahead of print] PMID: 30423321
Similar articles
2. KRAS Suppression-Induced Degradation of MYC Is Antagonized by a MEK5-ERK5 Compensatory Mechanism. Vaseva AV, Blake DR, Gilbert TSK, Ng S, Hostetter G, Azam SH, Ozkan-Daglyyan I, Gautam P, Bryant KL, Pearce KH, Herring LE, Han H, Graves LM, Witkiewicz AK, Knudsen ES, Pecot CV, Rashid N, Houghton PJ, Wennerberg K, Cox AD, Der CJ. *Cancer Cell*. 2018 Nov 12;34(5):807-822.e7. doi: 10.1016/j.ccr.2018.10.001. PMID: 30423298
Similar articles
3. Whole genome screen reveals a novel relationship between Wolbachia levels and Drosophila host translation. Grobler Y, Yun CY, Kahler DJ, Bergman CM, Lee H, Oliver B, Lehmann R. *PLoS Pathog*. 2018 Nov 13;14(11):e1007445. doi: 10.1371/journal.ppat.1007445. [Epub ahead of print] PMID: 30422992 Free Article
Similar articles
4. Targeting MYC dependency in ovarian cancer through inhibition of CDK7 and CDK12/13. Zeng M, Kwiatkowski NP, Zhang T, Nabet B, Xu M, Liang Y, Quan C, Wang J, Hao M, Palakurthi S, Zhou S, Zeng Q, Kirschmeier PT, Meghani K, Leggett AL, Qi J, Shapiro GI, Liu JF, Matulonis UA, Lin

On the right side of the search results, there are several promotional boxes:

- Best matches for chemical genetics:** Includes links to "Chemical genetics: elucidating biological systems with small-molecule compounds.", "Chemical genetics-based target identification in drug discovery.", and "Chemical genetics".
- Results by year:** A scrollable list showing the distribution of publications over time.
- PMC Images search for chemical genetics:** Displays a grid of small images related to chemical genetics research.
- Titles with your search terms:** Lists titles such as "Validation of chemical genetics for the study of zipper-interacting protein kinase" and "Combining Chemical Genetics with Proximity-Dependent Labeling Reve".

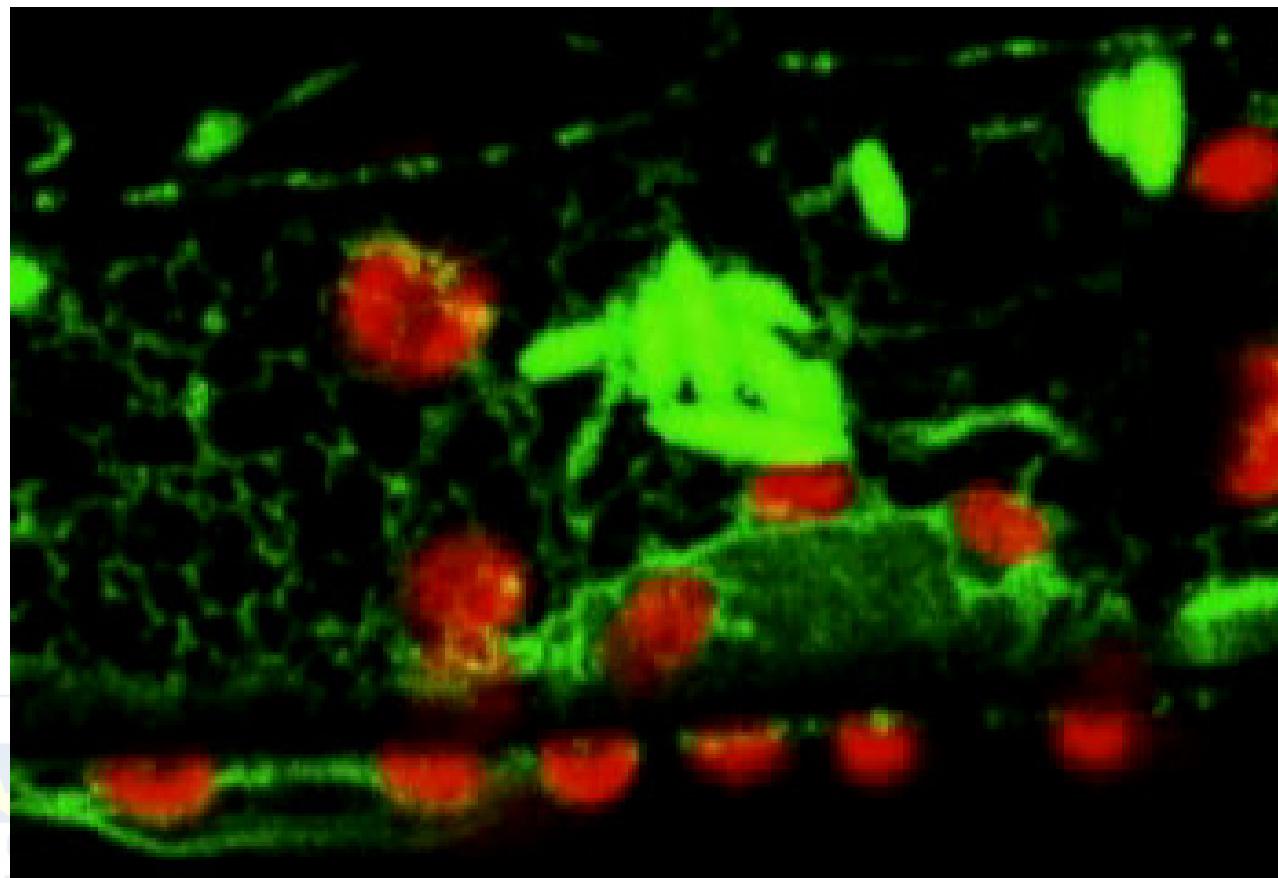

Chemical Genetics

■ New trends

- „chemical genetics“ – more than **50.000/130.437** records in PubMed database (16.10. **2008**/24.10. **2019**, **an increase of >260 %**)
- Like in the case of genetics, there are also „**forward**“ and „**reverse**“ genetics approaches
- Unlike in „classical“ genetics approaches, **the subject of study** is not a gene, but a **protein**
- Chemical genetics tries to identify either the **target protein** after a chemical treatment and after following phenotypic changes („forward“ chemical genetics) or **chemicals able to interact with protein of interest** („reverse“ chemical genetics)
- For that purpose there are carried out **searches in the libraries** of various **chemicals** (thousands of entries, commercially available)
- example: **analysis of endomembrane transport** in plants

Chemical Genetics

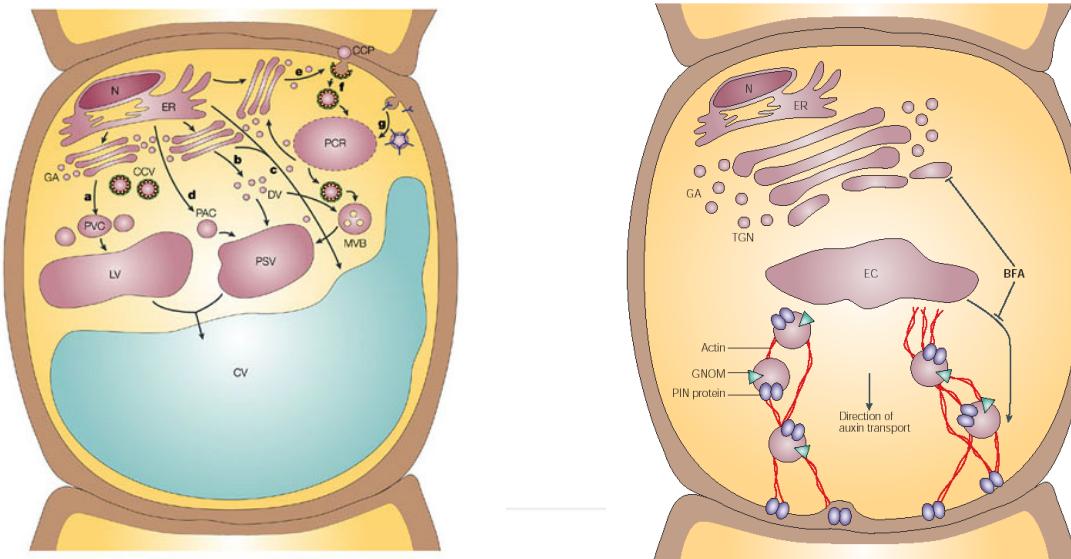

- Analysis of mechanisms of endomembrane transport by chemical genetics approaches
 - In plants cells there occur very dynamic processes mediated mainly by endomembrane transport

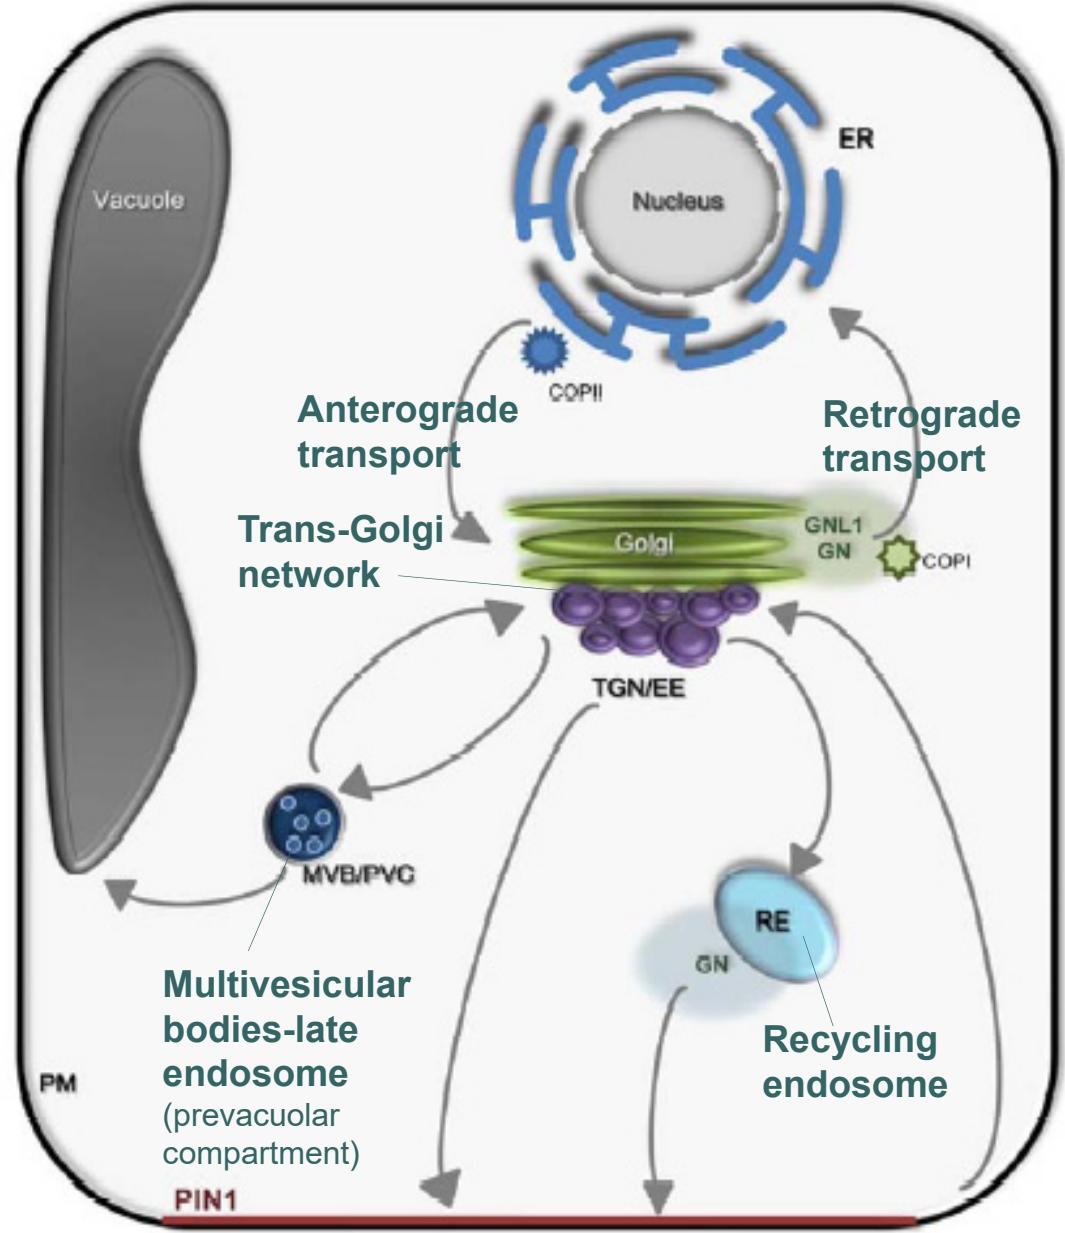

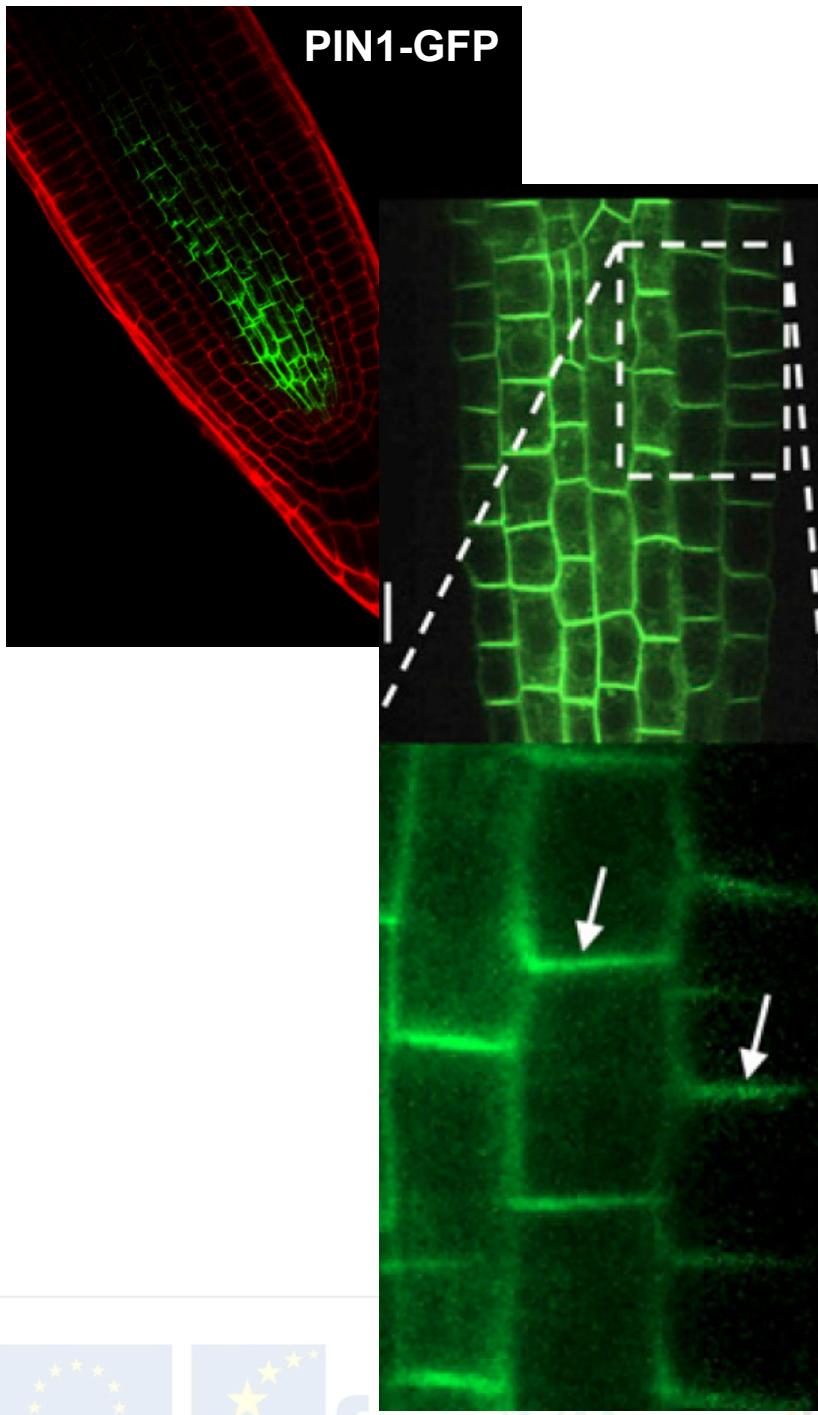

GFP targeted to the ER

Chemical Genetics

- Analysis of mechanisms of endomembrane transport by chemical genetics approaches
 - In plants cells there occur very dynamic processes mediated mainly by endomembrane transport (see film, GFP targeting to the ER)
 - Endomembrane transport is an important regulatory mechanism in signal transduction and regulation of cellular processes

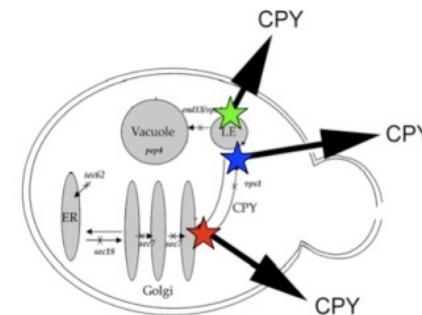

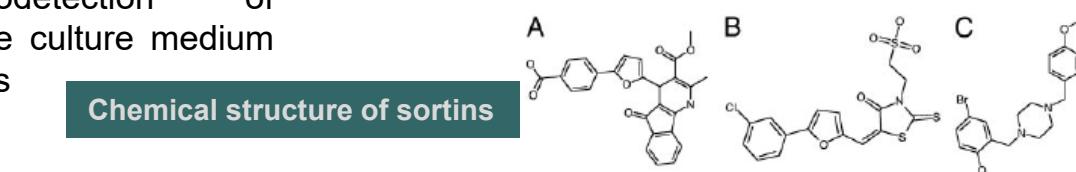

Chemical Genetics

- Analysis of mechanisms of endomembrane transport by chemical genetics approaches

- By searching in the „library“ of chemicals there were identified those, that lead to the secretion of enzyme (carboxypeptidase Y) in yeast (*S. cerevisiae*) – this enzyme is normally transported to the vacuole via the endomembrane transport
 - Analysis of changes in secretion using dot-blot and immunodetection of carboxypeptidase Y in the culture medium with monoclonal antibodies

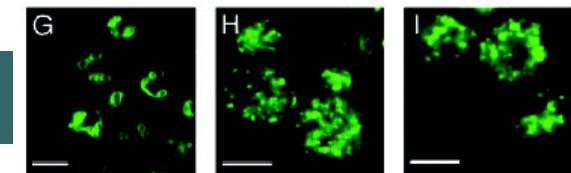

Chemical structure of sortins

Immunodetection of carboxypeptidase

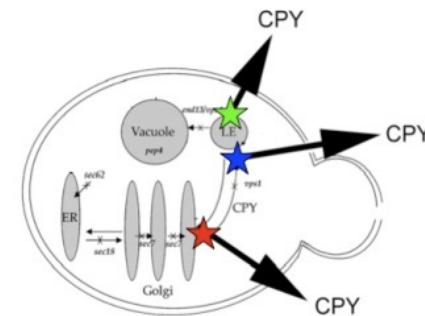

Detection of vacuole phenotype (tonoplast shape) of yeast by staining with a specific color (MDY-64)

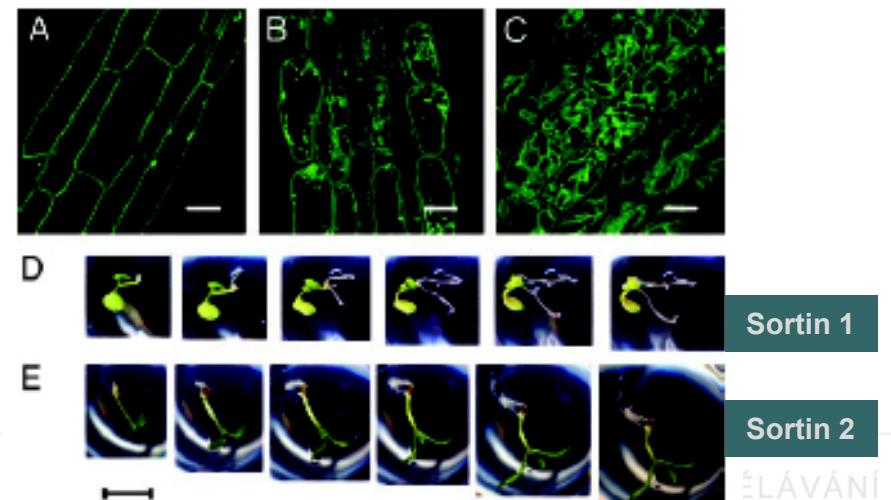

Chemical Genetics

- Analysis of mechanisms of endomembrane transport by chemical genetics approaches
 - By searching in the „library“ of chemicals there were identified those, that lead to the secretion of enzyme (carboxypeptidase Y) in yeast (*S. cerevisiae*) – this enzyme is normally transported to the vacuole via the endomembrane transport
 - Analysis of changes in secretion using dot-blot and immunodetection of carboxypeptidase Y in the culture medium with monoclonal antibodies
 - Identified compounds („sortins“) were able to induce similar changes in *Arabidopsis* as well – transport mechanisms are conserved in yeast and in plants
 - For detailed identification of the molecular process affected by one of the identified „sortins“, the analysis of its influence on a secretion of a marker protein (AtCPY) was performed – sortin 1 specifically inhibits only this secretory pathway

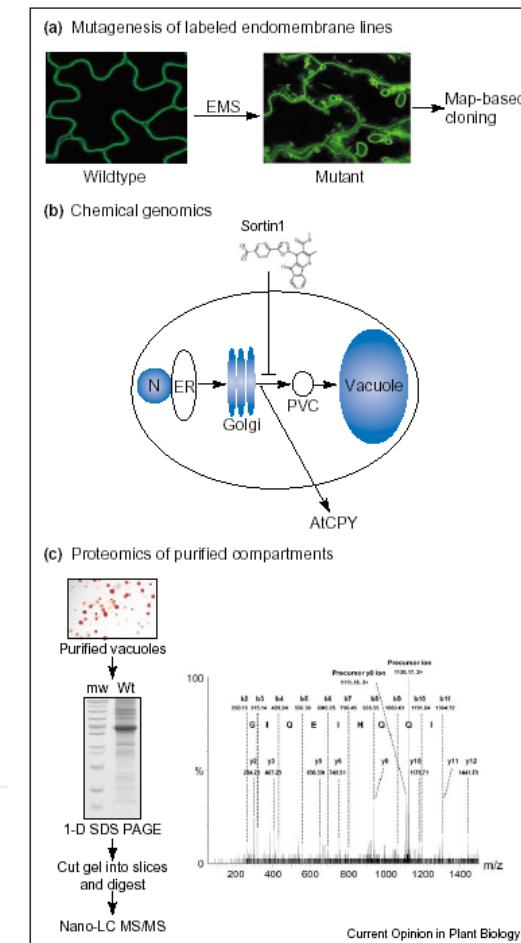

Shape of plant vacuoles using EGFP:-TIP

Phenotype of seedlings in the presence of sortins

Zouhar et al., 2004 Iním fondem
a státním rozpočtem České republiky

- Analysis of mechanisms of endomembrane transport by chemical genetics approaches – summary
- GFP::d-TIP vacuole membrane (tonoplast) labelling and identification of mutations leading to altered tonoplast morphology
- Chemical genetics in combination with classical genetics – identification of proteins participating in regulation of endomembrane transport
- Proteomics approaches – identification and analysis of vacuole proteome

Summary

- Methods of gene expression analysis
 - Qualitative analysis of gene expression
 - Preparation of transcriptional fusion of promoter of analysed gene with a reporter gene
 - Preparation of translational fusion of the coding region of the analysed gene with reporter gene
 - Use of the data available in public databases
 - Tissue- and cell-specific gene expression analysis
 - Quantitative analysis of gene expression
 - DNA and protein chips
 - Next generation transcriptional profiling
- Regulation of gene expression in the identification of gene function by gain-of-function approaches
 - T-DNA activation mutagenesis
 - Ectopic expression and regulated gene expression systems
- Chemical Genetics
