

MASS SPECTROMETRY BASED METABOLOMICS AND LIPIDOMICS

Darshak Gadara

Supervisor - Dr. Zdenek Spacil

Targeted Proteomics and Metabolomics Group

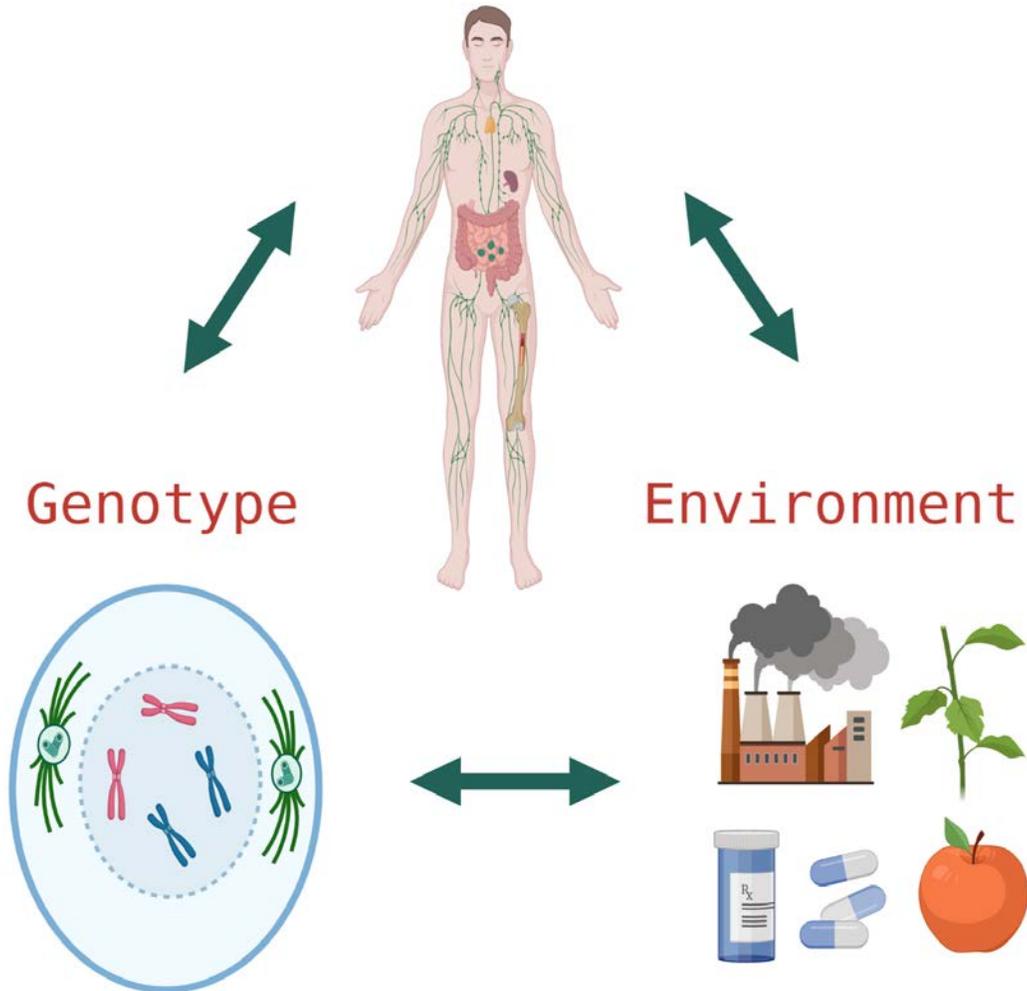

RECETOX, MUNI, Brno

Flow of Presentation

- Systematic Data Processing of Untargeted Metabolomics
- *Application* - Case/Control Fecal Sample of CVID
- High-Throughput Microbore LC-MS Lipidomics
- *Application* - APOE3 vs APOE 4 of iPSC Cerebral Organoid
- *Application* - 3D-Hepatospheroids to Study Hazardous Compounds

Why Metabolomics?

Phenotype (Metabolome)

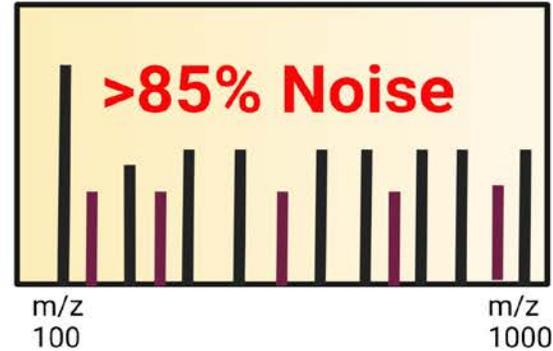

- Metabolites are the endpoint of biological reactions
- Constantly synthesized, degraded, and interacting within the system and with the environment
- Represents dynamic relation between genotype and environment
- Extremely important in clinical diagnosis

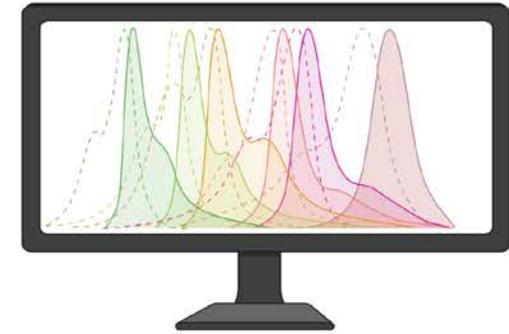

Challenge of Data Processing

LC-MS (high resolution)

LC-MS Spectra

Data Processing

Full Scan Mode

Unbiased Measurement

Interpretation

Application in Clinical Case/Control sample

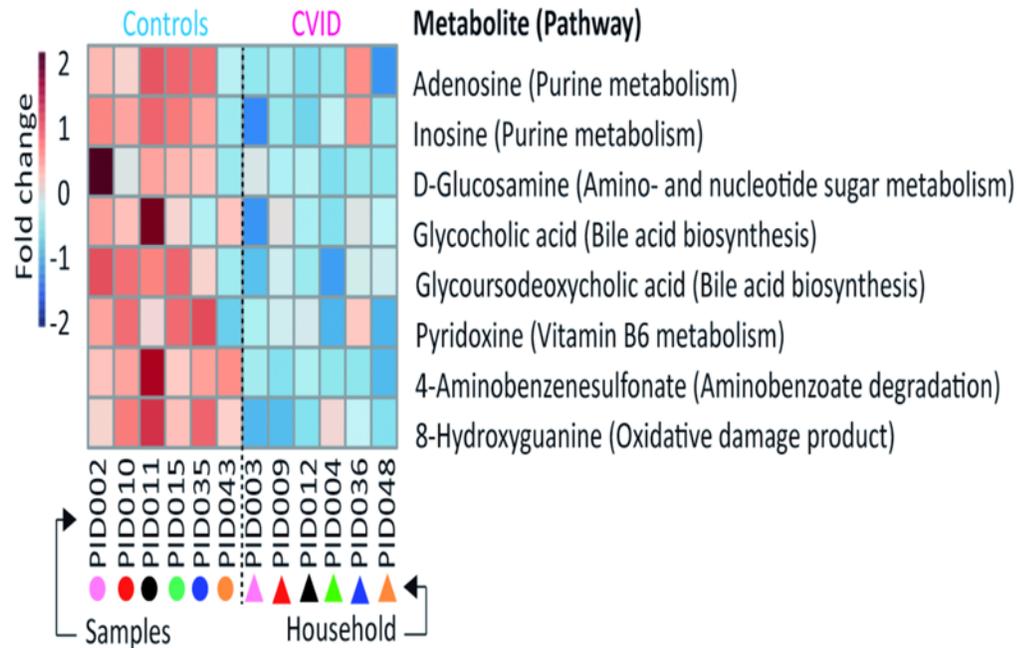

Common Variable Immunodeficiency Disease (CVID) - inadequate antibody responses and low levels of immunoglobulins

Case/Control Fecal sample (n=6) subjected to developed metabolomics data processing workflow

Interpretation of metabolomics data for CVID vs healthy subject

Eight metabolites differ significantly between CVID vs Healthy subject ($p < 0.05$)

In collaboration with Prof. David Smajs group, Faculty of medicine

- *Purine metabolites are important anti-inflammatory signal molecules modulating inflammatory response*

Welihinda AA et al. Cell Signal (2016) 28:552–60

He B et al. J Exp Med (2017) 214:107–23

- *A decreased level of “purine-like” molecules was previously detected in blood of CVID patients*

Callery EL et al, Sci Rep (2019) 9:e7239

- *Dysregulation of bile acid metabolism related to bacterial dysbiosis has been reported for several conditions*

Zheng X et al. BMC Biol. 2017 Dec 14; 15(1):120

Wang Y et al. mSystems. 2019 Dec 17; 4(6)

- *Decreased plasma levels of pyridoxine (B6) observed CVID patients*

Bierwirth J et al. Eur J Clin Nutr (2008) 62:332–5

Summary of Metabolomics

- We developed a systematic metabolomics data processing workflow for clinical biomarker discovery, explaining individual feature filtering stages
- Identified eight metabolites in stool samples which clearly distinguished between CVID patients and controls

Summary of Lipidomics

- μ LC-MS/MS lipidomics workflow allows sensitive, high-throughput and robust measurement of lipidome from small volume in vitro samples such as single hepatospheroid or single cerebral organoid.
- Application demonstrated on 5 different projects (1 first author + several co-authors manuscript under preparation)
- This work paves the way for a more routine application of μ LC-MS/MS lipidomics in high-throughput in vitro toxicity screening.

ACKNOWLEDGEMENT

- Sincerely Thankful to
- Supervisor- Dr.Zdenek Spacil
- Lab-members
- Collaborators

Thank you all for listening
