

Pokud je tlak 0,01 atm ve výšce 38 km a 0,001 ve výšce 57 km, jaký je tlak ve výšce 19 km (bez ohledu na změny teploty)?

$$\log P_2 = a \cdot h$$

$$h_1 = 38 \text{ km} \quad P_1 = 0.01 \text{ atm}$$

$$h_2 = 57 \text{ km} \quad P_2 = 0.001 \text{ atm}$$

$$\log P_1 = a \cdot h_1$$

$$\log P_2 = a \cdot h_2$$

$$\log P_1 - \log P_2 = a(h_1 - h_2)$$

$$a = -\frac{1}{19}$$

$$\log P_3 = -\frac{1}{19} \cdot 19 = -1$$

$$P_3 = 10^{-1} = \text{yellow circle}$$

$$\log \frac{P_1}{P_2} = a(h_1 - h_2)$$

$$\log \frac{0.01}{0.001} = a(38 - 57)$$

$$\log 10 = a(-19)$$

$$1 = -19a$$
