# ChatGPT
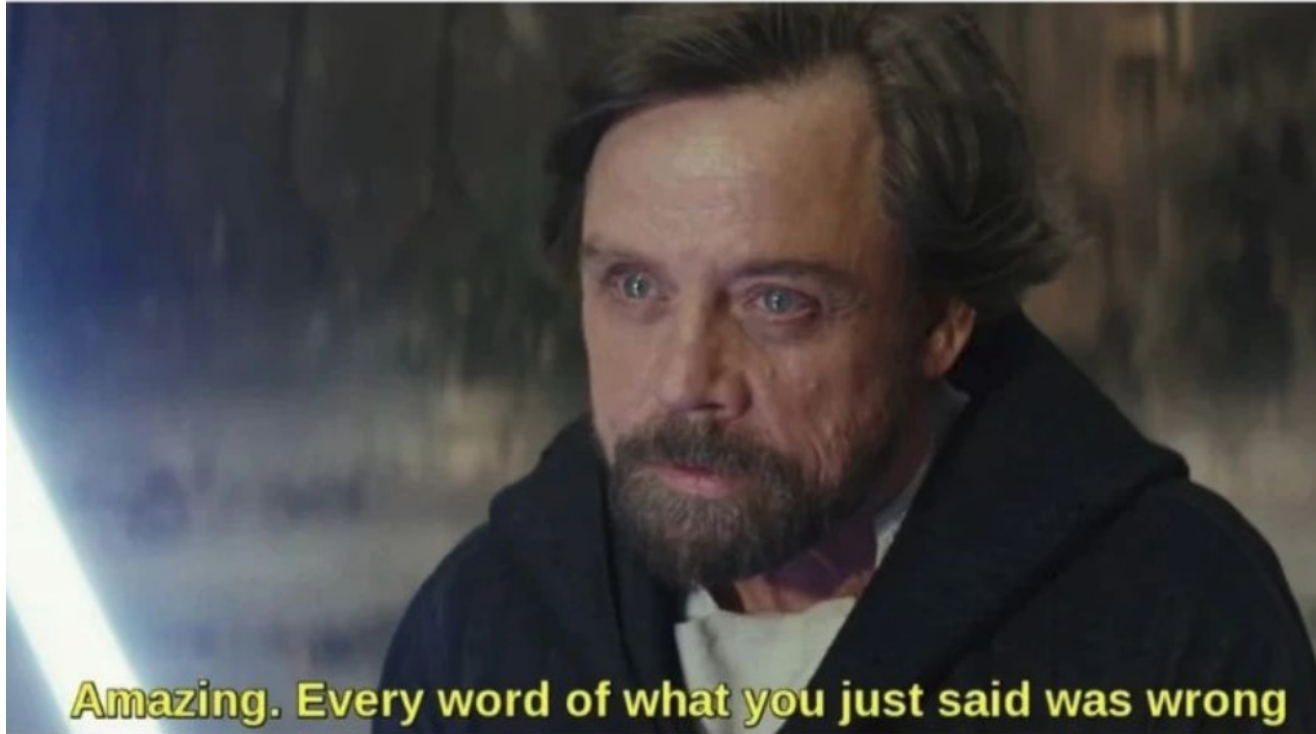

- užitečný nástroj

- Google na steroidech

- bude čím dál lepší!

- Nenechte být ChatGPT chytřejší než vy!
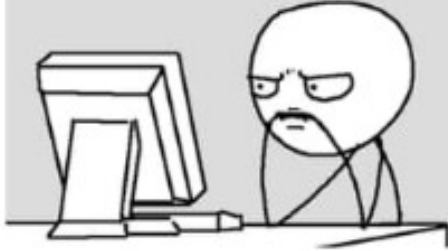

When you ask Chat-GPT to code something slightly more complex than a calculator.py

Amazing. Every word of what you just said was wrong

**Before Chat GPT**

* Developer coding - 2 hours
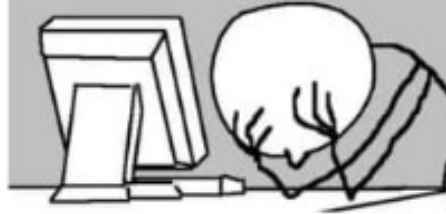

* Developer debugging - 6 hours

**After Chat GPT**

* ChatGPT generating code - 5 min

* Developer debugging - 24 hours

You finally find the source of the bug! It's a variable labelled "temp"

temp was committed into the code 4 years ago and was never removed

Several important calculations seem to rely on temp now

None of this is documented anywhere
