Determination	**Hard worker**	**How determination and hard work led to a successful thesis** During my time at the Institute, I had difficulty getting positive data. The experiments were not working, and I could not prove my hypothesis. But I was determined to find a solution. So I researched a lot, drew inspiration from other articles and experiments, and eventually optimized the protocols and got that one idea that eventually led to a more positive outcome, and in the long run led to a successful thesis.	Postdoc abroad - con gan experience in anotl
Curious	Creativity	As a Scientific Writer, I conducted literature review (of original research articles) and wrote engaging and informative articles on health, nutrition, and wellness topics. The curiosity of finding interesting information led me to develop thorough review skills, and I used that information by using my creativity. I wrote simplified	My own research gr research group focusi especially pe

		articles that would draw attention to the people that are not in science. The hard part was going from that academic writing to a more engaging style of writing. So, I had to get creative and curious on how to get this really complicated topic to a level that everyone will understand,	
Helping others	Collaborative spirit	Bridging knowledge with compassion and empowering others in the process. As a laboratory demonstrator I conducted wet-lab experiments with the students, elucidated scientific concepts, and cultivated a collaborative learning environment. My job was not just to deliver knowledge but to create a supportive environment that encouraged mutual respect, participation and growth.	Educate others either through my research - the kno

For me, the most important tool from this session is CREATING STORIES. By creating stories for all points of my resume I will be able to prepare myself better, sound more confident and not be so stressed about the questions I will get during interviews. It will really help me a lot. Thank you 😊
